QUALITY ASSURANCE AUDIT

Website QA Audit Report — V5 (Re-test)

Re-test of all 99 findings open in V4 and of the 69 fixed in V4, plus a fresh black-box review of functionality, forms, responsive UI, console and network, performance, accessibility, SEO and security surface

Site	HubsteriaBrew
URL	https://hubsteriabrew.com/
Test date	3 October 2026
Prepared by	Ace Argee Vizcarra
Version	5.0 (re-test; follows V1 of 23, V2 of 24, V3 of 25 and V4 of 30 September 2026)

Confidential. Prepared for the HubsteriaBrew team ahead of public launch.

- F. Testing limitations 163

Executive Summary

HubsteriaBrew is a café point-of-sale and back-office platform for coffee shops in the Philippines. This is the fifth QA round:

- **V1 (23 September 2026)** found 117 issues, **V2 (24 September)** left 133 open, **V3 (25 September)** left 143 open, and **V4 (30 September)** left **99 open** (1 Critical, 5 High).
- **No developer reply was received after V4.** The live site has nevertheless changed a lot: the build we tested (commit e8db2a9, built 3 October) has a **new full-screen register**. Sell, Checkout, Orders, Barista and Customers now open without the app sidebar, and My Brew and Appearance ("Appearance Studio") were redesigned.

On 3 October 2026 we tested the live site (https://hubsteriabrew.com) the same way as before: from the outside, with no source code, using the public site, the forms and the signed-in app. The test account is the Business-owner / Platform-consultant account. After sign-in it still opens in the **"HubsteriaBrew" pilot organisation**. As in every earlier round, every test that changed data was made in the **Kape Bayan Coffee Co. (Demo)** café.

This V5 report does three things:

- **It re-tests every one of the 99 findings open in V4** by following its V4 steps, and checks that the 69 findings fixed in V4 are still fixed.
- **It re-runs the Aceotopes testing guide** with 4 cash sales and 1 void.
- **It runs a fresh audit** under the same brief, with extra attention on the redesigned register.

Overall health

The most serious V4 problems are fixed. There is no Critical issue left, and the two selling problems from V4 are resolved:

- **The ₱5 takeout cup is no longer added to every item.** The tile, cart, checkout and slip now show the same price (FUN-66: Critical in V4, now a Low leftover).
- **Cashiers can pick milk, sweetness, shots and syrups again** (FUN-69, was High).
- **The consultant console loads again** (FUN-68, was High).
- **Money history's date filter shows every movement** (FUN-73), and the garbled chart label is gone (FUN-72).
- **Order slips now show the cash handed over and the cashier** (FUN-27, FUN-59).
- **Public demo guests can no longer open the real owners' role editor** (SEC-01).

Of the 99 findings open in V4, **15 are fixed and 53 partly fixed**, and **66 of the 69 V4 fixes still hold**.

But the money reports still disagree with each other, and the redesign brought new problems. We found **25 new issues**, and **4 findings regressed**: 2 that were open in V4 and 2 that V4 had fixed. The most serious ones:

- **Money history still double-counts, and now stops at 30 September.** Daily totals count every cash sale and refund twice (FUN-42, High). They have no card for 1–3 October, so today's sales and voids

change the closed 30 September cards (FUN-81).

- **A sale paid today is filed under 30 September.** It was started as a draft that day, so Orders, My Brew and Money Command count its ₱305 on the wrong day (FUN-80, High).
- **Shortages are still hidden.** A shift closed with ₱0 counted against ₱925 in cash still shows "Balanced" (FUN-67, High).
- **The new register doesn't say whose books a sale goes into.** Sell, Checkout and Customers no longer show the organisation or the "Demo" label (FUN-83), and on phones the café and register name are squeezed to nothing (UI-39).
- **Sell shows no product photos:** the new small photo files were never uploaded, so every tile request returns 404 (NET-09).

The pilot trim is unchanged. A typed address to a hidden module still returns to My Brew, but all 14 "hidden" modules are still in the sidebar and open normally when clicked (FUN-71). The consultant account now also sees an 18-page master-admin "T1 Platform" menu (SEC-14).

15	53	28	2	25
FIXED	PARTIALLY FIXED	STILL OPEN	REGRESSED	NEW IN V5

Of the 99 findings open in V4:

- 15 are fixed, 53 are partially fixed and 28 are still open.
- 2 have regressed: UI-22 (the header now also hides the account menu at 1280 px) and PERF-04 (every page loads more JavaScript again).
- 1 could not be verified from outside: FRM-04 (the email sender).

Of the 69 fixed in V4, 66 still hold:

- **FUN-40 regressed:** the discount card no longer explains a ₱300 partial refund.
- **A11Y-14 regressed:** the rebuilt colour field in Appearance Studio no longer announces its error.
- **FRM-08 can't be re-checked** without pressing Save.

With the 25 new issues, **111 issues are open in V5** (V4: 99). The count went up, but the severity went down: **no Critical issue, 4 High (V4: 1 Critical, 5 High), 24 Medium and 83 Low**. Most new issues are Low polish on the redesigned screens: 8 accessibility and 6 layout items.

0	4	24	83
CRITICAL	HIGH	MEDIUM	LOW

Independent verification: a separate tester re-checked 93 results from scratch:

- every Regressed and Not verifiable status
- every Fixed of a former Critical, High or Medium finding
- every new High or Medium finding
- a sample of 16 new Low findings and 21 partially fixed or still-open items

That tester made these changes:

- **2 severities:** FUN-80 is High rather than Critical, because the cash is recorded correctly and only the day is wrong; FUN-30 went back to Low.
- **11 status labels made consistent:** an item partly fixed in V4 and unchanged since stays "Partially fixed".
- **3 duplicate reports merged.**

The tester agreed with every other result. Severity follows the HubsteriaBrew testing guide:

Severity	Meaning
CRITICAL	Wrong money, duplicate or missing sale, lost data, or checkout broken
HIGH	An important workflow cannot be finished, or there is a serious trust, legal or privacy problem
MEDIUM	Works, but is confusing, incorrect, or a notable risk
LOW	Polish and good-practice improvements

How the developer claims held up

No developer document was received after V4, so this round has no claim-by-claim cross-check. The V4 briefing's statements about the pilot trim were re-tested only where they became findings: the sidebar and click-through (FUN-71), the in-app links and the `/money` alias (FUN-74) and the setup wizard (FUN-70). We did not re-verify the other V4 briefing statements.

Top 3 concerns

1. The money screens still don't agree. Checkout itself is solid: every one of our 4 sales and our void reconciled exactly with the drawer. But:

- **Money history's Daily totals count each cash sale and refund twice** (FUN-42, High). They also **have no card after 30 September**: today's sales and our void changed the 30 September cards instead (FUN-81).
- **A sale paid today is filed under 30 September**, when its draft was started. Orders, My Brew and Money Command show today ₱305 short; only the cash ledger is right (FUN-80, High).
- **A shift closed with ₱0 counted still shows "Balanced"** on Registers and Money history. Only Money Command, which the pilot hides, shows it as −₱925 (FUN-67, High).
- **"Discounts and free drinks" no longer explains the gap** between sales before and after discounts: a ₱300 partial refund is deducted silently (FUN-40, regressed). My Brew's "Sales by hour" also ignores sales before 6 AM (FUN-82).

2. The new register is cleaner, but it hides where you are.

- **Sell, Checkout and Customers no longer show the organisation**, the "(Demo)" label or the "simulated" banner. This account belongs to two organisations, so a cashier can't tell whether a sale goes into the pilot books or the demo (FUN-83).
- **On phones the café, register and "Online" status are squeezed to 0 px**, and on tablets they are cut to "...Cou..." (UI-39).
- **Sell has no product photos:** every tile asks for a 300-px photo that doesn't exist (404), while phones still download the 800-px files (NET-09, PERF-05).
- **On laptops Checkout's help card pushes the complete-sale button below the screen** until it is minimised (UI-40), and after a cash sale with change the amount to hand back appears only in a toast that disappears (FUN-86).

3. The pilot trim is still half-applied, and more admin pages are now visible.

- **All 14 "hidden" modules are still in the sidebar and open normally when clicked.** Only a typed address, a reload or a bookmark returns to My Brew (FUN-71). My Brew, the demo banner and Help still link to hidden pages (FUN-74).
- **Pricing Setup, still reachable this way, offers a "Bulk update" of every product price** with "Apply preview" (FUN-71).
- **The consultant account now sees an 18-page "T1 Platform" master-admin menu** that its own help calls administrator-only (SEC-14). Its Transaction Integrity page shows a raw database error, "column cafe_guardian_checks.description does not exist" (NET-11).

What improved since V4

- **Selling:**
  - No more ₱5 takeout cup on every item (FUN-66, was Critical).
  - Add-on choices work again (FUN-69).
  - The drink options dialog keeps keyboard focus (A11Y-01).
  - On laptops, 2 of 3 cart lines show instead of 1 (UI-02, partly).
  - Sell and Orders no longer jump on desktop (PERF-03, partly).
- **Money reports:**
  - The Money history date filter returns every movement (FUN-73).
  - The garbled chart label is gone (FUN-72).
  - Money Command's "What sold" totals nest correctly across periods (FUN-39).
  - Shifts closed with no count now read "Not counted" (FUN-67, partly).
- **Receipts:** the slip prints the amount tendered (FUN-27) and the cashier (FUN-59).
- **Menu:** hiding a category now removes its products from Sell and Menu preview, verified cleanly for the first time (FUN-12).

- **Consultant console:** it loads again (FUN-68).
- **My Brew:**
  - The redesign shows "0 low · 64 out of stock" (UI-26).
  - The charts are readable (UI-35) and no longer expose unnamed donut slices (A11Y-17).
- **Pilot trim:** the old `/money` address now redirects like the others (FUN-74, partly).
- **Public site and security:**
  - robots.txt no longer blocks four sales pages (SEO-07).
  - Demo guests can't open the real owners' role editor (SEC-01).
- **Speed:**
  - Sell on phones improved from 43/51 to 54/58 (LCP 5.9 → 4.0 s).
  - Orders on desktop improved from 74 to 98.

What still works well

- **Checkout and cash handling:**
  - All 4 V5 cash sales went through first time, with one checkout call each.
  - Tile, cart, checkout and slip agreed on every sale.
  - My Brew, Money Command, the drawer and Money history moved by exactly our amounts.
  - The void refunded exactly ₱35.
- **The testing guide:** every in-scope step passes. Step 13 was covered by the menu test, and step 14 was not run this round.
- **Sign-in and sign-out:**
  - A wrong password gets a clear message that doesn't reveal whether the account exists.
  - Log out ends only the current device (FUN-31 still fixed).
  - After logging out, Back and deep links need a new sign-in.
- **Site structure:** no broken internal links across 17 public and 145 signed-in URLs, and no horizontal scrolling at any width from 375 to 1920 px.
- **Security basics:** HTTPS with HSTS, no mixed content, framing blocked, no source maps, and no secrets in the JavaScript (only the public anon key).
- **Lighthouse:** Accessibility and Best Practices are 100 on the public pages.

Changes since V4

V4 left **99 findings open**. Each one was re-tested on 3 Oct 2026 by following its V4 steps, and the 69 findings fixed in V4 were checked again. Statuses: **Fixed** (the steps now give the expected result, shown by a V5 screenshot), **Partially fixed**, **Still open**, **Regressed** (worse, or a fix came undone), **Not verifiable** and **New** (first found in V5).

15	53	28	2	25
FIXED	PARTIALLY FIXED	STILL OPEN	REGRESSED	NEW IN V5

Of the 99 findings open in V4: 15 fixed, 53 partially fixed, 28 still open, 2 regressed (UI-22, PERF-04), 1 could not be verified (FRM-04). **V4 fixes still holding:** 66 of 69 (not holding: FUN-40, regressed; FRM-08, not verifiable; A11Y-14, regressed). With the 25 new findings, **111 issues are open in V5** (V4: 99).

Every V4 finding and its V5 status

ID	In V4	Finding	V5 status	Note
FUN-04	MEDIUM fixed in V4	Unknown public URLs redirect to the login page instead of a 404 page	Fixed	Still fixed: logged out, an unknown address shows the public "404 · Page not found" page with "Go home" (HTTP 404, title "Page not...
FUN-05	MEDIUM fixed in V4	After login the user is not returned to the page they asked for	Fixed	Still fixed: opening /orders while logged out goes to /auth?redirect=%2Forders, and after one sign-in the app returns to /orders...
FUN-06	MEDIUM fixed in V4	Help "(?)" tips are hover-only: tapping or clicking them shows nothing	Fixed	Still fixed. The page-help card now starts collapsed on My Brew; after "Page help", the (?) tip opens on a desktop click and on...
FUN-07	MEDIUM fixed in V4	A discount equal to the whole order (₱100 off or 100% off) still makes the order free with no...	Fixed	Still fixed. On a ₱100.00 order, "Pesos off 100" and "Percent off 100" are refused with "To make the order free, use Make...
FUN-08	MEDIUM fixed in V4	The Orders screen doesn't update live: barista status changes appear only after a refresh	Fixed	Still fixed. With Orders open in a second tab (never reloaded), moving our tickets 1003-011 and 1003-013 on the Barista board...
FUN-09	LOW fixed in V4	Cash-received field tells a cashier who typed a huge amount to "Enter numbers only"	Fixed	Still fixed. On a ₱100.00 order, typing 99999999999 as cash received shows "That amount is too large. Enter the cash actually...
FUN-10	MEDIUM fixed in V4	Checkout doesn't show order type, customer name or barista note, so they can't be checked before...	Fixed	Still fixed in the redesigned Checkout. Our sale 1003-011 showed "Customer QA-TEST V5 guide | Order type Dine in | Barista note...
FUN-11	MEDIUM fixed in V4	Reordering menu categories always fails with "Your account is not allowed to do this"	Fixed	Still fixed: "Move QA-TEST V5 Category up" swapped it with "QA-TEST V4 Category" (one POST rpc/cafe_reorder_menu_categories →...

ID	In V4	Finding	V5 status	Note
FUN-12	MEDIUM	Hiding a category does not hide its products from the register	Fixed	Now verified with a clean before/after: "QA-TEST V5 Hidden-Cat Item" (only in "QA-TEST V5 Category") was on Sell (All and search)...

FUN-14	MEDIUM fixed in V4	Duplicate product names are accepted silently, creating identical register tiles with different...	Fixed	Still fixed: adding a second "QA-TEST V5 Snack" (₱20) shows "This might already be on file · QA-TEST V5 Snack · ₱10.00" and keeps...
FUN-15	MEDIUM fixed in V4	Add-on group minimum is ignored: "Optional · 1–2 choices" lets the cashier add the drink with no...	Fixed	Still fixed: a choice group with minimum 1 is saved as "Pick several · Required · 1–2 choices", and on Sell "Add to order ·...
FUN-16	LOW fixed in V4	Out-of-stock item is missing from the Inventory alert box; other items with 0 on hand still say...	Fixed	Still fixed: all 64 stock items with 0 on hand show a red "Out of stock" badge, and the "Stock alerts → Out of stock" box at the...
FUN-17	MEDIUM	Integrity lists unpaid orders but shows 0 open alerts; Money Command still says "Everything looks...	Partially fixed	See Findings by Category.
FUN-18	MEDIUM fixed in V4	Production reports itself as a "development" build from commit "local"	Fixed	Still fixed: Settings → System shows GIT COMMIT e8db2a9, DEPLOYMENT production, BUILT AT 2026-10-03T02:05:17.169Z (a new build...
FUN-19	MEDIUM fixed in V4	Customer records cannot be deleted or anonymised	Fixed	Still fixed: "Remove personal details" on the new "QA-TEST V5 Customer" asked "Remove this customer's name, phone, and email from...
FUN-20	MEDIUM	Money trail ledger still lists each cash sale twice as "Money in" and shows raw status codes	Partially fixed	See Findings by Category.
FUN-21	LOW	"Back to why HubsteriaBrew" still opens My Brew for logged-in users	Partially fixed	See Findings by Category.
FUN-22	LOW fixed in V4	"For Owners" and "Money Management" are two menu items for the same page	Fixed	Still fixed: the Product dropdown, footer and mobile menu each have one "For Owners" entry for /money-management.
FUN-23	LOW	Help & Learning promises "support links" but offers no way to contact support	Partially fixed	See Findings by Category.
FUN-24	LOW fixed in V4	Orders in the "Every café" view repeat order numbers and don't show which café they belong to	Fixed	Still fixed: with Café = "Every café" on Served, 25/25 rows start with their café ("Kape Bayan — BGC · 1002-002") and no number...
FUN-25	LOW	Notifications bell is a disabled placeholder whose explanation can never be seen	Still open	See Findings by Category.
FUN-27	LOW	Receipt shows "Cash" equal to the total plus a separate "Change given", so the amount tendered never...	Fixed	Fixed. The order slip now prints the cash handed over: 1003-013 (₱140.00, paid with ₱200) shows "Amount tendered ₱200.00 · Cash...

ID	In V4	Finding	V5 status	Note
FUN-28	LOW	Order slip and Cash in / out still show the payment time in the device's time zone (detail page is...	Partially fixed	See Findings by Category.
FUN-29	LOW fixed in V4	Two Sell tabs share a cart but don't sync live, so an open tab can check out a stale cart	Fixed	Still fixed. A second Sell tab opened with the same cart; after tab 2 added Cheese Roll, tab 1 (not reloaded) showed "Checkout · 2...
FUN-30	LOW	Registers give no warning for a shift open for three days, so today's sales are filed under 30...	Partially fixed	See Findings by Category.
FUN-31	LOW fixed in V4	Logging out on one device signs the account out on every device	Fixed	Still fixed. Two fresh sign-ins (devices A and B); Log out on A. B kept working after a reload and after a forced token refresh...
FUN-32	LOW fixed in V4	Product and customer detail views have no URL; browser Back leaves the module	Fixed	Still fixed: product and customer details have their own address (/products?view=..., /customers?customer=...) and browser Back...
FUN-34	LOW	Loyalty rule still describes the reward two different ways ("Free Cafe Latte" vs "a free drink up to...	Partially fixed	See Findings by Category.
FUN-35	LOW fixed in V4	Money screens still read "items sold in yesterday", "1 order(s) still need payment" and "SSSW"	Fixed	Still fixed: Money Command (reached by clicking the sidebar; a typed address still bounces to My Brew) reads "29 items sold...
FUN-36	LOW	New products are inserted in the middle of the menu, regardless of their category	Still open	See Findings by Category.
FUN-37	LOW fixed in V4	Products list has no "Off the menu" filter and forgets filters on reload	Fixed	Still fixed: the status filter offers "Off the menu", and the filters stay in the address (/products?status=off_menu&category=...)...
FUN-39	MEDIUM	Money Command "What sold" under-counts longer periods: This month shows fewer Espressos than Last 7...	Fixed	Counts now nest: Last 7 days (155 orders) shows Espresso 146, Double Espresso 20, Ristretto 7; Last 30 days (545 orders), which...
FUN-40	MEDIUM fixed in V4	"Discounts and free drinks" no longer adds up: Sales after discounts is ₱300 lower than the card...	Regressed	See Findings by Category.
FUN-41	MEDIUM	Money Command day boundaries don't follow the café's calendar: "This month" shows an 8/31 row	Still open	See Findings by Category.
FUN-42	HIGH	Money history Daily totals count cash sales and refunds twice; "Expected in drawer" disagrees with...	Still open	See Findings by Category.
FUN-43	LOW fixed in V4	Features page still labels live offline selling and recipes/waste as "Not built yet"	Fixed	Still fixed: Features (reached by clicking the sidebar; a typed address still bounces to My Brew) marks "Keep selling offline" and...
FUN-44	LOW	Audit trail still shows internal field names, IDs and "Role not recorded"; category edits omit the...	Partially fixed	See Findings by Category.

ID	In V4	Finding	V5 status	Note
FUN-45	MEDIUM fixed in V4	My Brew's "waiting on the barista board" count is always one higher than the board (counts an unpaid...	Fixed	Still fixed. My Brew's Service line now reads "Waiting | oldest 13h 39m | 9" and the Barista board's New column showed 9 at the...
FUN-46	LOW	Ready to open counts hidden menu sections ("24 section(s)" with 20 on the menu)	Partially fixed	See Findings by Category.
FUN-48	LOW	Features and Plans still promise "Compare cafés" / "branch comparison", which does not exist	Partially fixed	See Findings by Category.
FUN-49	LOW fixed in V4	Logged-in owner opening the free-trial link lands in "Set up your first café" for their live...	Fixed	Still fixed: a logged-in owner opening /get-started lands on My Brew, not the "Set up your first café" wizard.
FUN-50	LOW fixed in V4	In-app Loyalty, Inventory and Demo centre tabs carry marketing page titles	Fixed	Still fixed: tab titles are "Loyalty programs — HubsteriaBrew", "Inventory — HubsteriaBrew" and "Demo centre — HubsteriaBrew"...
FUN-52	MEDIUM fixed in V4	Money trail ledger and its CSV silently show only one register shift, so today's sales are missing	Fixed	Still fixed: Money trail says "All register shifts in this business (99 shifts). Drawer & register above s...", lists today's QA...
FUN-53	MEDIUM fixed in V4	Drawer & register shows an open, never-counted shift as "Short – ₱3,545.50 · Needs investigation"	Fixed	Still fixed: the open, never-counted shift Makati — Counter 1 shows Actual counted "No count", Over / short "—" ("Not counted yet...
FUN-54	MEDIUM fixed in V4	My Brew shows "Sales today ₱0.00" while Money Command shows ₱520.50 for the same five paid orders	Fixed	Still fixed: My Brew was redesigned, and its "Net sales ₱3,775.50 · 10 paid orders" matched Money Command (Today · All cafés, same...
FUN-55	MEDIUM fixed in V4	New cash sales are logged as "Cash sale for order draft" instead of the order number	Fixed	Still fixed: cash sales on Cash in / out name their order (e.g. "Cash sale for order 1003-013"); 32 numbered rows, 0 "order draft"...
FUN-56	MEDIUM	Pricing Setup still says its prices reach Sell only "when Supabase pricing migrations are applied"	Partially fixed	See Findings by Category.
FUN-57	LOW	Plans still sells Rush Mode, which Features says is not built, and "talk to us" has no link	Partially fixed	See Findings by Category.
FUN-58	MEDIUM fixed in V4	Café admin is titled "Kape Bayan — BGC" but shows whole-business totals (3 registers, ₱15,000)	Fixed	Still fixed: Café admin (reached by clicking the sidebar; a typed address still bounces to My Brew) with "All cafés" is headed...
FUN-59	LOW	Order slip still does not show who served the customer (café, address and VAT line are now there)	Fixed	Fixed. The order slip now names the cashier: 1003-011 reads "Dine in · QA-TEST V5 guide · Oct 3, 2026, 11:47 AM · Cashier...
FUN-60	MEDIUM fixed in V4	Money Command still counts a voided and refunded order's items as sold ("What sold", "items sold")	Fixed	Still fixed. After we voided 1003-012 (1 × Bottled Water, ₱35), Money Command (opened from the sidebar) went from "33 items sold...
FUN-61	LOW fixed in V4	Money history "Shift result" filter has no effect on the Daily totals tab	Fixed	Still fixed: the filter is labelled "Shift result (closed shifts tab)" and Daily totals says "Shift result applies to the Closed...
FUN-62	LOW	Café admin says terminal names and order are "managed here" but has no controls for them	Partially fixed	See Findings by Category.

ID	In V4	Finding	V5 status	Note
FUN-63	LOW fixed in V4	Business admin "See its money history" for one café opens Money history for all branches	Fixed	Still fixed: Business admin (reached by clicking the sidebar; a typed address still bounces to My Brew) → Kape Bayan — Cebu → "See...
FUN-64	LOW fixed in V4	Pricing Setup "Edit" buttons open the whole Products list, not the product in that row	Fixed	Still fixed: Pricing Setup (reached by clicking the sidebar; a typed address still bounces to My Brew) has 75 "Edit product" links...
FUN-65	LOW fixed in V4	Sell announces "1 items in the order" to screen readers	Fixed	Still fixed on the new full-screen Sell: with one Bottled Water in the cart the screen-reader status says "1 item in the order,...
FUN-66	CRITICAL	"Takeout cup and bag" (+₱5) is no longer pre-ticked, but still cannot be removed once tapped, even...	Partially fixed now LOW	See Findings by Category.
FUN-67	HIGH	Shift closed with ₱0 counted against ₱925 in cash sales still shows "Balanced" on Registers and...	Partially fixed	See Findings by Category.
FUN-68	HIGH	The Consultant Control Center crashes with "This page didn't load" for the consultant account	Fixed	The Consultant Control Center loads again in both organisations: "Platform Consultant", Organizations 2, Cafés in scope 1, Pending...
FUN-69	HIGH	Sell ignores add-on choices: milk, sweetness, extra shots and syrups cannot be picked, only size	Fixed	Fixed. On the Cafe Latte sheet every choice now selects and reprices: Small → ₱130, Oat milk → ₱160, Extra espresso shot → ₱200,...
FUN-70	MEDIUM	Café Starter Wizard in the single-café pilot org still offers "Add another café" and shows a...	Still open	See Findings by Category.
FUN-71	MEDIUM	Pilot trim is half-applied: all 14 "hidden" modules stay in the sidebar and open normally when...	Still open	See Findings by Category.
FUN-72	MEDIUM	My Brew sales chart shows a garbled amount: "₱10,262.1.1641532182693481e-10"	Fixed	The garbled float label is gone. My Brew was redesigned: the Today "Sales by hour" axis reads ["₱0","₱550","₱1,100","₱2,087"], 7...
FUN-73	MEDIUM	Money history date filter hides most cash movements (30 Sep: 2 of 76 shown; 1–28 Sep: none)	Fixed	Money history → Cash movements date filter now returns every movement for the range: today 16 (the unfiltered list also has 16 for...
FUN-74	LOW	My Brew and Help still link to pilot-"hidden" Money Command and Demo centre	Partially fixed	See Findings by Category.
FUN-75	LOW	Automated test entries "[sim:...] cash-in test / cash-out test" sit in the demo café's cash ledger	Still open	See Findings by Category.

FRM-03	LOW fixed in V4	Log-in still shows the raw server text "Request rate limit reached" when it is rate-limited	Fixed	Still fixed: a rate-limited log-in (429, mocked) shows "Too many attempts. Please wait a moment and try again."; 500 and offline...
FRM-04	HIGH	Auth email quota: two emails go through, but the sender and higher limit still can't be confirmed...	Not verifiable	As in V4, one real sign-up (03:48:08Z) and one real password reset 2 min 43 s later (03:50:51Z) to the +qa5v5 alias were both...
FRM-05	MEDIUM fixed in V4	Add product still accepts a ₱0.00 price without any confirmation	Fixed	Still fixed: a ₱0 price shows the "This is a free product (₱0.00) — I confirm..." tick box and "Confirm this is a free product...
FRM-06	LOW	Some forms still disable Save with no explanation (category name, T2 name, cash in/out ₱0)	Partially fixed	See Findings by Category.
FRM-07	MEDIUM	"Book a Demo" silently refuses a junk phone number: the button does nothing and no message explains...	Partially fixed	See Findings by Category.
FRM-08	LOW fixed in V4	Add customer: whether "a@b..com" is still refused on Save could not be checked (Save not pressed...	Not verifiable	Could not be re-tested the V4 way: this round's rules forbid pressing Save on Add customer, and the V4 proof was a toast shown on...
FRM-09	MEDIUM	The T2 invitation form still accepts clearly invalid email addresses ("a b@c.com", "a@b")	Partially fixed now LOW	See Findings by Category.
FRM-10	LOW	Sign-up blocks weak passwords on the page; server-side enforcement could not be confirmed	Partially fixed	See Findings by Category.
FRM-11	LOW	Future-dated expenses are blocked on the page only; the database check is still to come	Partially fixed	See Findings by Category.
FRM-12	LOW	"Book a Demo" still prints a server error page as raw HTML ("<html>``<body> Service Unavailable...")	Partially fixed	See Findings by Category.
FRM-13	LOW fixed in V4	Login email is not marked required; an empty email shows the raw server text "missing email or...	Fixed	Still fixed: the /auth Email field is required, so an empty email is stopped by the browser ("Please fill out this field.") and no...
FRM-14	LOW	Add-ons "Smallest number of choices" still silently turns -1 into 1	Still open	See Findings by Category.
FRM-15	LOW fixed in V4	Sign-up draft (name, email, café name, consent ticks) is kept in the browser and shown to the next...	Fixed	Still fixed: the sign-up draft is kept only in sessionStorage (hb.registration.draft.v1), so a new tab opens an empty form with...

ID	In V4	Finding	V5 status	Note
FRM-16	LOW fixed in V4	No length limits on most text fields	Fixed	Still fixed: every text field tested has a maxlength (names 120–255, notes and messages 2,000), so a pasted 5,000-character value...
FRM-17	LOW fixed in V4	Invalid accent colour "#12" still gets no message on Appearance	Fixed	Still fixed after a redesign: Appearance is now "Appearance Studio" (sidebar click; typed URL redirects). On its Colours tab,...
FRM-18	LOW	Validation errors aren't consistently linked to their fields for screen readers	Still open	See Findings by Category.
FRM-19	LOW	Money history still accepts a date range with "From" after "To" and blames the range size	Partially fixed	See Findings by Category.
FRM-20	LOW	Pricing Setup override box silently discards what you type; invalid values stay on screen	Partially fixed	See Findings by Category.
FRM-21	LOW fixed in V4	Pricing Setup bulk update accepts a -200% change and treats an empty value as 0%	Fixed	Still fixed: Bulk update (Pricing Setup, opened from the sidebar) refuses -200% with "Percent adjustments must be between −100%...
FRM-22	LOW	Add stock item accepts a 14-digit low-stock warning level with no message	Still open	See Findings by Category.
UI-02	MEDIUM	Sell order panel still shows only 2 of 3 order lines on iPad landscape and small laptops	Partially fixed now LOW	See Findings by Category.
UI-03	HIGH fixed in V4	Checkout button is cut off on iPad landscape and all common laptop sizes, now including 1440×900	Fixed	Still fixed, and better than V4: on the full-screen Sell the Checkout button is pinned in the order panel and fully visible...
UI-04	MEDIUM fixed in V4	Main "Start Your 7-Day Free Trial" call to action is missing from the mobile header and menu	Fixed	Still fixed: at 375px the header shows "Start Your 7-Day Free Trial" next to the menu icon and the menu ends with Log In, Book a...
UI-05	LOW	Homepage hero mock-up still shows blank product images and "—" values	Partially fixed	See Findings by Category.
UI-06	MEDIUM	Internal/developer jargon shown on public marketing pages	Still open	See Findings by Category.
UI-07	MEDIUM fixed in V4	"Why HubsteriaBrew is different" comparison loses its column labels on mobile	Fixed	Still fixed: "What sets HubsteriaBrew apart from ordinary café POS" is a set of cards that each say "Ordinary POS ..." in the text,...
UI-08	LOW	Product pages are still very short (40–80 words) with little to explain the feature	Partially fixed	See Findings by Category.
UI-09	MEDIUM	Tab bars on phones hide tabs off-screen: Settings (6 of 9), Orders ("Everything"), Money Command	Partially fixed	See Findings by Category.
UI-10	MEDIUM	Money and count figures use old-style serif numerals: "₱0.00" reads as "₱o.oo"	Still open	See Findings by Category.
UI-11	LOW	On phones the Orders filters still push every order below the fold	Partially fixed	See Findings by Category.

ID	In V4	Finding	V5 status	Note
UI-13	LOW	Homepage still repeats the same blocks (tagline ×3, feature titles ×2)	Partially fixed	See Findings by Category.
UI-14	LOW fixed in V4	Desktop "Product"/"Resources" menus close again when the trigger is clicked after hovering	Fixed	Still fixed: hovering "Product" opens the menu and clicking it afterwards keeps it open (aria-expanded stays true).
UI-15	LOW	Placeholder in the "Primary need" field is still slightly cut on phones	Partially fixed	See Findings by Category.
UI-16	LOW fixed in V4	Orphaned word in the closing call-to-action heading	Fixed	Still fixed: the closing heading breaks into two balanced lines at 1024 and 1440px.
UI-17	LOW fixed in V4	Inconsistent CTA styling: "Start Your 7-Day Free Trial" shown as bare text next to a button	Fixed	Still fixed: on /demo "Start Your 7-Day Free Trial" is a filled button next to the bordered "Book a Demo" (both now use the darker...
UI-18	LOW	Options screen: bottom navigation still peeks under the footer on tablets	Fixed	Fixed by the Sell redesign: Sell no longer has the app bottom navigation, and at 768px the Espresso options sheet covers the...
UI-19	LOW	Half-transparent "Add an item" bar sits over product names and prices on phones and tablets	Still open	See Findings by Category.
UI-20	LOW fixed in V4	"₱active" shown as register status (currency symbol prefixed to a status word)	Fixed	Still fixed: "Your registers" reads "Code BGC-1 · Active" (no "₱active").
UI-21	MEDIUM	On phones the category Edit and Hide buttons are pushed off the card and cannot be tapped	Still open	See Findings by Category.
UI-22	MEDIUM	Signed-in header pushes the account menu off-screen at 1024px and now also at 1280px	Regressed	See Findings by Category.
UI-23	LOW	Order detail header still truncates the order time on phones	Partially fixed	See Findings by Category.
UI-24	LOW	Inconsistent action styling: plain-text "Mark sold out"/"Hide" next to bordered buttons	Partially fixed	See Findings by Category.
UI-25	LOW	Inconsistent naming, spelling and internal jargon in the UI	Still open	See Findings by Category.
UI-26	MEDIUM	My Brew shows "Low stock 0" while 65 ingredients are out of stock	Fixed	Fixed by the My Brew redesign: "Needs attention › Stock alerts" now reads "0 low · 64 out of stock on tracked items.", matching...
UI-28	LOW	Export Center and Transaction integrity still show developer notes: repo file path, a staff name,...	Partially fixed	See Findings by Category.
UI-29	LOW	Plans and Café Starter Wizard still show the generic "This page" help card	Partially fixed	See Findings by Category.
UI-30	LOW	Guardian Center still shows migration IDs, "Supabase" and release-process notes to café owners	Partially fixed	See Findings by Category.

ID	In V4	Finding	V5 status	Note
UI-31	MEDIUM	Payment Setup still shows webhook and hosting-provider details to café owners	Partially fixed now LOW	See Findings by Category.
UI-32	LOW fixed in V4	Payment Setup page is styled unlike every other screen: sans-serif title and a narrow, misaligned...	Fixed	Still fixed: Payment Setup uses the same H1 style as other screens (Fraunces 600 24px) and a full-width column.
UI-33	LOW fixed in V4	Plan names differ: the website sells "Basic", the in-app Plans screen calls the same tier "Starter"	Fixed	Still fixed: the public /pricing page and the in-app Plans screen both use Starter / Premium / Multi-Café.
UI-34	LOW fixed in V4	Business admin help card: "Minimize" drops onto its own line on phones	Fixed	Still fixed: at 375px Business admin (opened from the menu drawer) shows a single "Page help" button at the top right; no...
UI-35	LOW	My Brew charts render in solid black and their labels are cut off (top axis value, "100%")	Fixed	Fixed by the My Brew redesign: "Sales by hour" uses brown bars with readable axis labels (₱0 ... ₱2,087, 6a ... 10p), and "Payment...
UI-36	LOW	Public header: brand name cut to "Hubst..." on phones and the trial button shown twice on tablets	Still open	See Findings by Category.
UI-37	LOW	Organisation switcher cuts the café name mid-word ("Kape Bayan Coffee Co. (Dem") with no "..."	Still open	See Findings by Category.
UI-38	LOW	Phone bottom bar: the "Money Command" label wraps to two lines and sits lower than the other tabs	Still open	See Findings by Category.
NET-02	LOW	Consultant Summary now loads, but "Cafés in scope 1" undercounts the cafés of its 2 organizations	Partially fixed	See Findings by Category.
NET-04	LOW fixed in V4	Vercel Speed Insights script returns 404 on every page (60/60)	Fixed	Still fixed: /_vercel/speed-insights/script.js answers 200 on all 73 page loads (17 public + 56 signed-in), with no related...
NET-06	LOW	Same API requests fired several times per page load (redundant fetching)	Still open	See Findings by Category.
NET-07	LOW	Signed-in pages still make 46–110 requests per load (Sell 110)	Partially fixed	See Findings by Category.
NET-08	LOW	Most signed-in pages still throw a JavaScript error on load (React error #418)	Partially fixed	See Findings by Category.
PERF-01	MEDIUM	Sell screen still slow on phones (LCP 4.01 s / 4.06 s): first photo waits behind 2.0 MB of photos	Partially fixed	See Findings by Category.
PERF-02	MEDIUM fixed in V4	Homepage layout shift is extreme (CLS 1.06 mobile / 0.85 desktop): the footer jumps as sections...	Fixed	Still fixed: the homepage does not jump while it loads. Layout shift is 0.00 on mobile and 0.00 on desktop (V4 0.00 / 0.00); the...
PERF-03	MEDIUM	My Brew, Products and Registers still jump (desktop CLS up to 1.13); Sell and Orders are now stable	Partially fixed	See Findings by Category.
PERF-04	MEDIUM	Every page loads more JavaScript than in V4, including 888 KiB of back-office code on the login page	Regressed	See Findings by Category.

ID	In V4	Finding	V5 status	Note
PERF-05	MEDIUM	Product photos are still 800-px files (~1.5 MB avoidable on Sell phones); new small size is missing...	Still open	See Findings by Category.
PERF-06	LOW fixed in V4	Avoidable waits: /products still redirects (≈801 ms on mobile); homepage first response hit 1.92 s	Fixed	Still fixed: /products opens directly with no redirect (as in V4), and every page's server answered in 48 ms–53 ms, including the...
PERF-07	LOW fixed in V4	Script ~flock.js is cached for only 25 minutes on every page	Fixed	Still fixed: /~flock.js is not loaded on any of the 16 V5 runs (not loaded in V4 either; V1 25 min, V2 25 min, V3 25 min). The...
PERF-08	LOW	Checkout still waits on 6 server calls in a row (~1.9 s; V4 ~2.3 s), the same chain as in V4	Partially fixed	See Findings by Category.
A11Y-01	LOW	Drink options dialog does not keep keyboard focus inside (Tab leaves the open dialog for the page...	Fixed	Fixed. The drink options dialog now keeps keyboard focus inside: after "Add to order" (Tab 16) Tab wraps back to the dialog's...
A11Y-02	MEDIUM fixed in V4	Selected menu category and order type (Dine in/Take out/Pickup/Delivery) are not announced to screen...	Fixed	Still fixed. Category chips and Dine in / Take out / Pickup / Delivery sit in named groups ("Menu category", "Order type") and...
A11Y-03	LOW	Drink options: "Required" (Milk choice, Sweetness) is marked with an attribute screen readers ignore	Partially fixed	See Findings by Category.
A11Y-04	LOW	Owner invitations: the Organization dropdown has no accessible name	Partially fixed	See Findings by Category.
A11Y-05	LOW fixed in V4	No "Skip to content" link inside the logged-in app (44 Tab stops before page content on every...	Fixed	Still fixed. Every signed-in page, including the new full-screen Sell, Orders, Barista and Customers screens, starts with a...
A11Y-06	LOW fixed in V4	Orders status tabs point to a tab panel that does not exist (invalid aria-controls)	Fixed	Still fixed. On Orders (now a full-screen page) the selected tab points to a rendered tab panel; axe reports no...
A11Y-07	LOW fixed in V4	Inline text links are distinguishable only by colour (no underline, 1.1–2.2:1 contrast with...	Fixed	Still fixed. Inline links on /auth, / and /get-started are underlined; axe link-in-text-block passes, and no public page has any...
A11Y-08	LOW	Heading levels skip (h1 → h3) on Sell and Money Command, and some screens still have two main...	Partially fixed	See Findings by Category.
A11Y-09	LOW fixed in V4	Markup structure: organizations list uses `<div>` inside `<ul>`; demo banner is outside all landmarks	Fixed	Still fixed. The organizations list uses `<li>` items and the demo notice has role="status" inside a landmark; axe "region" fires on...
A11Y-10	LOW	Small touch targets remain (20×20 px help icons, 72×16 px "Demo Center" link) on a touch-first POS	Partially fixed	See Findings by Category.
A11Y-11	LOW	Closing the Clear order, Add customer or Request a feature dialog does not return focus to its...	Partially fixed	See Findings by Category.
A11Y-12	LOW fixed in V4	Book a Demo form fields do not declare their purpose (no autocomplete on name, email, phone,...	Fixed	Still fixed. The Book a Demo form declares name, organization, email, tel and country-name on its personal-data fields.

ID	In V4	Finding	V5 status	Note
A11Y-13	LOW fixed in V4	Header register-status chip is a keyboard stop with no role, and its hidden label differs from the...	Fixed	Still fixed. The "BGC — Counter 1 open" header chip is a `<span role="status">`, not a Tab stop, and has no hidden label. (Its text...
A11Y-14	LOW fixed in V4	Appearance Studio: an invalid colour code is shown in red but not linked to the field or announced	Regressed	See Findings by Category.
A11Y-15	LOW fixed in V4	Pricing Setup table reads every product name twice and has an unnamed column	Fixed	Still fixed. On Pricing Setup (opened from the sidebar) thumbnails have alt="" and the last column is headed "Actions"; axe...
A11Y-16	LOW	Every signed-in page now has two "banner" landmarks (the demo notice was wrapped in a second...	Still open	See Findings by Category.
A11Y-17	LOW	My Brew charts expose donut slices as unnamed images ("Payments today", "Order pipeline")	Fixed	Fixed. My Brew no longer has the "Payments today" and "Order pipeline" donut charts; the order stages are text ("Service line"),...
SEO-03	LOW	App routes still send no noindex in the server HTML, and 11 (e.g. /consultant, /help) are not in...	Partially fixed	See Findings by Category.
SEO-04	LOW	Forgot-password H1 is still just the brand name, and the noindex sign-in page is still listed in...	Partially fixed	See Findings by Category.
SEO-05	LOW	Four page titles are still very short (/contact, /security, /privacy, /terms)	Partially fixed	See Findings by Category.
SEO-06	LOW fixed in V4	4 feature pages (/demo, /inventory, /loyalty, /features) show crawlers an empty page with no H1 or...	Fixed	Still fixed: all 15 marketing pages, including /demo, /inventory, /loyalty and /features, ship their H1 and text in the server...
SEO-07	MEDIUM	robots.txt now blocks four public sales pages (/demo, /features, /inventory, /loyalty) listed in the...	Fixed	Fixed: the four Disallow lines for /demo, /features, /inventory and /loyalty are gone from robots.txt; the pages are crawlable,...
SEC-01	MEDIUM	Public demo guests can still open the role editor of two real owner accounts	Fixed	Fixed: a public demo guest's Staff page no longer has any "Edit role & café" button (0 account controls on 7 rows), so the role...
SEC-02	MEDIUM	CSP still allows inline scripts ('unsafe-inline'), and the session token is still in localStorage	Still open	See Findings by Category.
SEC-05	LOW	www → apex redirect is still temporary (307)	Partially fixed	See Findings by Category.
SEC-09	LOW	Anonymous speed samples go through a public database function; its validation and rate limit are...	Partially fixed	See Findings by Category.
SEC-11	LOW fixed in V4	Terms of Service name the operator but give no address, governing law or place to settle disputes	Fixed	Still fixed: /terms has the "Governing law and disputes" section (Arizona law, courts in Maricopa County, Arizona) and the...
SEC-12	LOW	Security headers still trust an outside video service, including camera and microphone, that no page...	Still open	See Findings by Category.

ID	In V4	Finding	V5 status	Note
SEC-13	LOW	Terms and Privacy Policy changed after V3 but still say "In effect since 24 September 2026"	Still open	See Findings by Category.

New findings of V5 (25) are listed in *Findings by Category* with the New tag.

Lighthouse scores, V4 → V5

Same pages and settings as V4. ▲ / ▼ mark a real change (more than ±5 points for Performance, which varies between single runs; any change for the other categories), ≈ marks a Performance change inside that noise band, and = means no change. A page that now redirects (hidden in the pilot) could not be measured.

Scorecard

Lighthouse 12.8 lab results, with the same settings as V1–V4:

- **Mobile** uses Lighthouse's default Moto G Power emulation with simulated slow-4G throttling, and **Desktop** uses the desktop preset.
- **App pages** were measured while signed in, in the demo café, with nothing else using the machine.
- **Columns:** Performance is shown for each round, and Accessibility, Best Practices and SEO for V5 (the V4 → V5 changes are in *Changes since V4*).
- **Money Command could not be measured:** a direct load redirects to My Brew. The `/money` address that V4 used instead now redirects too.
- **Colours:** scores of 90–100 are green, 50–89 amber, and 0–49 red.

Registers	Desktop	1.1 s → 1.1 s	**1.10 → 1.13**	0 ms → 0 ms	238 ms → 243 ms

Targets are LCP ≤ 2.5 s, CLS ≤ 0.1 and TBT ≤ 200 ms. Bold marks V5 results in Google's "poor" band (LCP above 3.5 s, CLS above 0.25, TBT above 600 ms).

How to read these numbers:

- **Small score changes are noise.** Each page was run once per device (Sell and My Brew twice), so a change of about ±5 points means nothing.
- **This round's test machine was about 9% slower than V4's** (median mobile benchmark index 3537 vs 3886). Timing-based numbers, such as blocking time, look somewhat worse than the code alone explains.
- **Real improvements:**
  - **Sell on phones:** 43/51 → 54/58, with LCP 5.9 → 4.0 s.
  - **Orders:** 85 → 94 on mobile and 74 → 98 on desktop. Its desktop layout shift fell from 0.95 to 0.06.
  - **Sell on desktop:** 68 → 91, mostly because the full-screen layout no longer shifts (CLS 0.96 → 0.03).

- **Looks like progress, but isn't:**
  - Part of Sell's lighter desktop load is the 64 photo requests that fail with 404 (NET-09), which cost nothing to decode.
  - Money Command's "n/a" is the pilot redirect.
- **Real regressions:**
  - **JavaScript grew again on every page, by 9–14%**, and the sign-in page now carries 888 KiB of back-office code (PERF-04).
  - **My Brew on desktop fell from 73 to 60** in both runs. Its LCP went from 1.1 to 2.7 s, because the dashboard keeps rebuilding for about 3 seconds.
  - My Brew, Products and Registers still shift on desktop (CLS up to 1.13), and Registers on phones fell from 86 to 78 as its layout shift grew from 0.21 to 0.31 (PERF-03).
  - **Accessibility on signed-in pages dropped from 100 to 96**, because the new register chips fail contrast (A11Y-22).

Full Lighthouse reports are in `v5/reports` (earlier rounds: `v1/reports` … `v4/reports`).

Testing Guide Checklist

These are the results of the *Aceotopes Consultant Testing Guide* (Phases A–F), re-run in full with the test account in the Kape Bayan demo café. We used 4 of the 5 authorised cash sales and did 1 void. **Every in-scope step passes again.** Two steps were covered differently this round:

- **Step 13 (add a product)** was covered by the menu test: a QA-TEST product was created, shown on Sell, edited and archived.
- **Step 14 (sell it)** was not run, but sales 1003-011 to 1003-013 exercised the same selling path.

The device rows use the new full-screen register.

Step	Title	V1	V2	V3	V4	V5	Notes (V5)
1	Sign in	Pass	Pass	Pass	Pass	Pass	Lands on /my-brew in 3.3 s, first attempt. A fresh sign-in still opens the "HubsteriaBrew" pilot organisation, not the demo café.
2	Confirm workspace	Pass	Pass	Pass	Pass	Pass	The account menu shows Business owner and Kape Bayan Coffee Co. (Demo); the café switcher lists BGC, Cebu and Makati.
3	My Brew dashboard	Pass	Pass	Pass	Pass	Pass	Greeting and cards load; BrewGuide opens and closes with Escape. The waiting count matches the barista board (FUN-45). "Sales by hour" misses sales before 6 AM (FUN-82).
4	Open the register (status only)	Pass	Pass	Pass	Pass	Pass	BGC — Counter 1 is open, opened by a public demo seat on 30 Sep and never closed (FUN-30). We didn't open or close any register.
5	Sell: choose products	Pass	Pass	Pass	Pass	Pass	New full-screen Sell, with no demo label (FUN-83) and no product photos (NET-09). Cafe Latte Small with Oat milk and 50% sweet priced ₱160; the ₱5 takeout cup is no longer pre-ticked (FUN-69 fixed, FUN-66 partly).

Step	Title	V1	V2	V3	V4	V5	Notes (V5)
6	Go to checkout	Pass	Pass	Pass	Pass	Pass	"Checkout · 2 Items · ₱175.50" opens Checkout with the same lines and total after 10% off, Cash pre-selected, and the order type, name and note shown.
7	Pay with cash	Fail	Fail	Pass	Pass	Pass	"Payment confirmed — ₱175.50", order 1003-011, with Saved / Paid / Posted / Sent / Receipt created. One checkout call (200).
7b	Pay with cash: over-tender change	Pass	Pass	Pass	Pass	Pass	₱100 for ₱35 gives ₱65 change, and ₱200 for ₱140 gives ₱60. The change appears only in a toast, not on the confirmation (FUN-86).
8	Confirm in Orders	Blocked	Blocked	Pass	Pass	Pass	Our sales appear under In progress as Paid, and each opens its detail page.
9	Barista: prepare and serve	Blocked	Blocked	Pass	Pass	Pass	1003-011 and 1003-013 moved New → Preparing → Ready → Served; Orders in a second tab updated within 3–6 s without a reload.
10	Orders: served	Blocked	Blocked	Pass	Pass	Pass	Both orders are listed under Served.
11	Receipt	Blocked	Blocked	Pass	Pass	Pass	The slip now shows the cashier (FUN-59) and the amount tendered (FUN-27), with the café name, address and "VAT: exempt".
12	Open Products	Pass	Pass	Pass	Pass	Pass	Products loads with 77 PHP prices.
13	Add a test product	Pass	Pass	Pass	Pass	Pass	Covered by the menu test: "QA-TEST V5 Snack" was created, shown on Sell, edited and archived.
14	Sell the new product	Blocked	Blocked	Pass	Pass	Not run	Not run this round: the new product was not sold. The same selling path was exercised by 1003-011 to 1003-013.

Step	Title	V1	V2	V3	V4	V5	Notes (V5)
15	Optional menu depth	Pass	Pass	Pass	Pass	Pass	Categories and Add-ons load. Menu preview is "hidden" in the pilot: a typed address redirects, but the sidebar link opens it (FUN-71).
16	GCash or Maya (manual confirm)	N/A	N/A	N/A	N/A	Not run	Out of scope: needs real GCash / Maya references.
17	Card terminal (manual reference)	N/A	N/A	N/A	N/A	Not run	Out of scope: needs a card terminal reference.
18	Money Command	Blocked	Blocked	Pass	Pass	Pass	Reached from the sidebar (a typed address redirects). Money Command, My Brew, the drawer and Money history each moved by exactly our sales and by −₱35 after the void.
19	Registers: review	Blocked	Blocked	Pass	Pass	Pass	The BGC drawer's expected cash moved by exactly each sale and by −₱35 after the void. We did not close the register.
20	Cash in / out	N/A	N/A	N/A	N/A	Not run	Out of scope: changes real till state. The Cash in / out page opens and lists our cash sales.
21	Log out	Pass	N/A	Pass	Pass	Pass	Run last. Log out lands on /auth; Back, a deep link and a second tab all need sign-in again. Other devices stay signed in (FUN-31 still fixed). Log out is no longer reachable from the full-screen Sell.
Device: desktop	Device: desktop Chrome (1440×900)	—	Fail	Pass	Pass	Pass	All four V5 cash sales were made at 1440×900. Sell now has no sidebar; all 3 cart lines and Checkout are visible. Checkout's help card pushes the complete button below the fold (UI-40).

Step	Title	V1	V2	V3	V4	V5	Notes (V5)
Device: ipad landscape	Device: iPad landscape (1024×768)	—	Pass	Pass	Pass	Pass	Order panel beside the menu; Checkout visible without scrolling, 2 of 3 lines shown (UI-02). Outside Sell the 1024 px header still hides the account menu (UI-22).
Device: ipad portrait	Device: iPad portrait (768×1024)	—	Pass	Pass	Pass	Pass	Tiles are tappable and a bottom "Checkout · ₱..." bar opens the order sheet. The café/register line is cut off (UI-39), and Hold/Discount/Clear sit under the Pay-with footer (UI-41).
Device: phone	Device: phone (375×812)	—	Pass	Pass	Pass	Pass	Tiles are tappable and the Checkout bar stays at the bottom, but the café, register and Online status are squeezed to nothing (UI-39).

Device spot-checks:

- **Desktop Chrome (1440×900):** all four V5 cash sales were completed at this size. All 3 cart lines and the Checkout button are visible, but Checkout's help card pushes the complete-sale button below the screen until it is minimised (UI-40).
- **iPad portrait (768×1024):** tiles are tappable, and a bottom "Checkout · ₱..." bar opens the order sheet. The café line is cut off (UI-39), and Hold, Discount and Clear sit under the payment footer (UI-41).
- **iPad landscape (1024×768):** the order panel sits beside the menu, Checkout is visible without scrolling, and 2 of 3 order lines show (UI-02). On workspace pages the header still hides the account menu at this width (UI-22).
- **Phone (375×812):** add-to-cart works and the Checkout bar stays at the bottom. The café, register and "Online" status are not visible (UI-39).

Progress against the plan

The planning package (`planning/` , 29 September 2026) classes every feature as MVP, post-MVP (v1.1, v1.2, v2) or Cut, and milestone M1 "Trimmed & hardened" removes the Cut and post-MVP surfaces from the owner's view. This table joins the developer's hidden list with the plan's classes (`planning/research/triage.json`) and with what we saw on 3 Oct 2026.

For each module we tried a typed address (or reload, or bookmark) and a click on its sidebar link. "Redirects" means the app returned to `/my-brew` with the "hidden during the pilot" message. "Still open" lists the V4 findings the plan maps to that module that are still open in V5.

Module	Developer	Plan class	In sidebar	Typed address	Sidebar click	Still open
Money Command	Cut	Cut	Yes	Redirects	Opens	FUN-41, UI-10, PERF-04, A11Y-04, FUN-20
Demo centre (in-app)	Cut	Cut	Yes	Redirects	Opens	FUN-46, FUN-48
Features / roadmap page	Cut	Cut	Yes	Redirects	Opens	FUN-57, UI-29, A11Y-11
Appearance	Cut	Cut	Yes	Redirects	Opens	UI-22
Guardian	Cut	Cut	Yes	Redirects	Opens	UI-30
Pricing Setup	Cut	Cut, v1.2, v1.1	Yes	Redirects	Opens	FUN-56, FRM-20, UI-25
Payment Setup	Cut	Cut	Yes	Redirects	Opens	UI-31, FUN-62
Transaction integrity	Cut	Cut	Yes	Redirects	Opens	FUN-17, UI-25
Exception center	Cut	Cut	Yes	Redirects	Opens	UI-28, UI-29
Business admin	Post-MVP	v1.2	Yes	Redirects	Opens	—
Café admin	Post-MVP	v1.2	Yes	Redirects	Opens	FUN-62
Menu preview	Post-MVP	v2	Yes	Redirects	Opens	—
Expenses ledger	Post-MVP	v1.1	Yes	Redirects	Opens	FRM-06, FRM-11
Approvals queue	Post-MVP	v1.1	Yes	Redirects	Opens	UI-29, UI-28

MVP features hidden by the trim: none. Every hidden module is Cut or post-MVP in the plan.

Cut or post-MVP surfaces the developer's list does not mention (checked on 3 Oct 2026):

Surface	Plan class	Still visible to the owner?
Notifications bell	Cut (F088)	Yes
BrewGuide panel	Cut (F104)	Yes
Consultant Control Center	Cut (F095, F096, F097)	Yes
Café switcher (multi-café)	v1.2 (F090)	Yes
Hardware equipment registry	v1.1 (F073)	Yes
Money history deposits tab	v1.1 (F057)	Yes
System status	Cut (F080)	No

Fix Verification (V4 → V5)

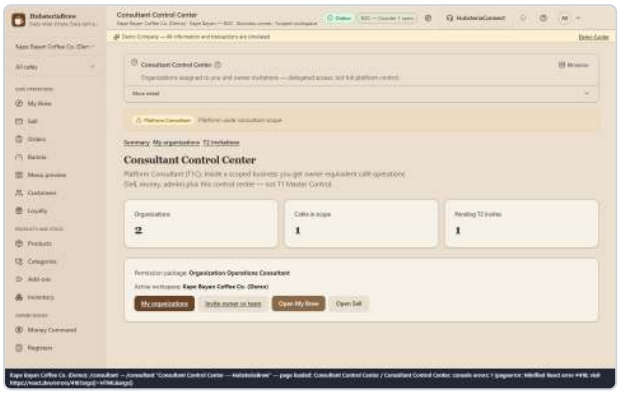

Every one of the 99 findings open in V4 was re-tested on 3 Oct 2026; the full list with each V5 status is in *Changes since V4*. A finding is marked **Fixed** only when its steps now give the expected result and a V5 screenshot shows it.

Category	Open in V4	Fixed	Partially fixed	Still open	Regressed	Not verifiable	New in V5	Open in V5

Proof of fixes: former Critical, High and Medium issues

FUN-68 · The Consultant Control Center crashes with "This page didn't load" for the consultant account HIGH

Fixed The Consultant Control Center loads again in both organisations: "Platform Consultant", Organizations 2, Cafés in scope 1, Pending T2 invites 1, with "My organizations" and "Invite owner or team". The V4 "useConsultantSession is not defined" crash is gone; only a React hydration warning (#418) remains in the console.

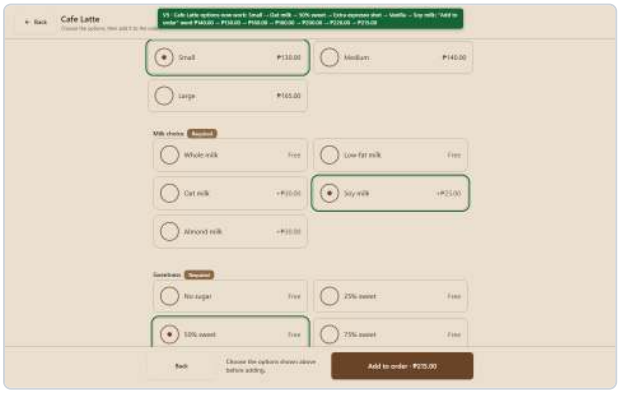

FUN-68 (1 of 2) · fixed (V5, 3 Oct 2026)

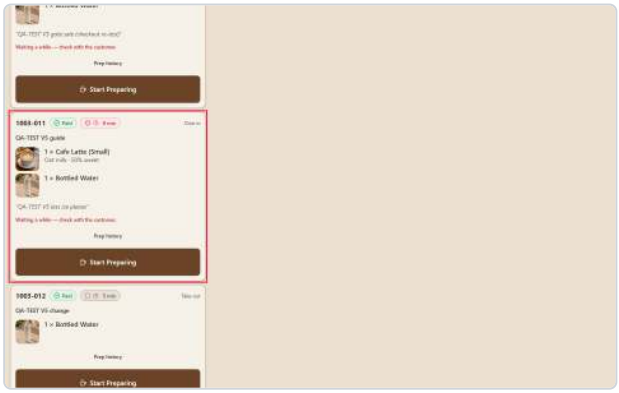

FUN-68 (2 of 2) · fixed (V5, 3 Oct 2026)

FUN-69 · Sell ignores add-on choices: milk, sweetness, extra shots and syrups cannot be picked, only size HIGH

Fixed Fixed. On the Cafe Latte sheet every choice now selects and reprices: Small → ₱130, Oat milk → ₱160, Extra espresso shot → ₱200, Vanilla → ₱220, Soy milk → ₱215. Our sale 1003-011 was rung up as "Cafe Latte (Small) · Oat milk · 50% sweet" ₱160.00 on the cart, checkout, barista ticket and slip.

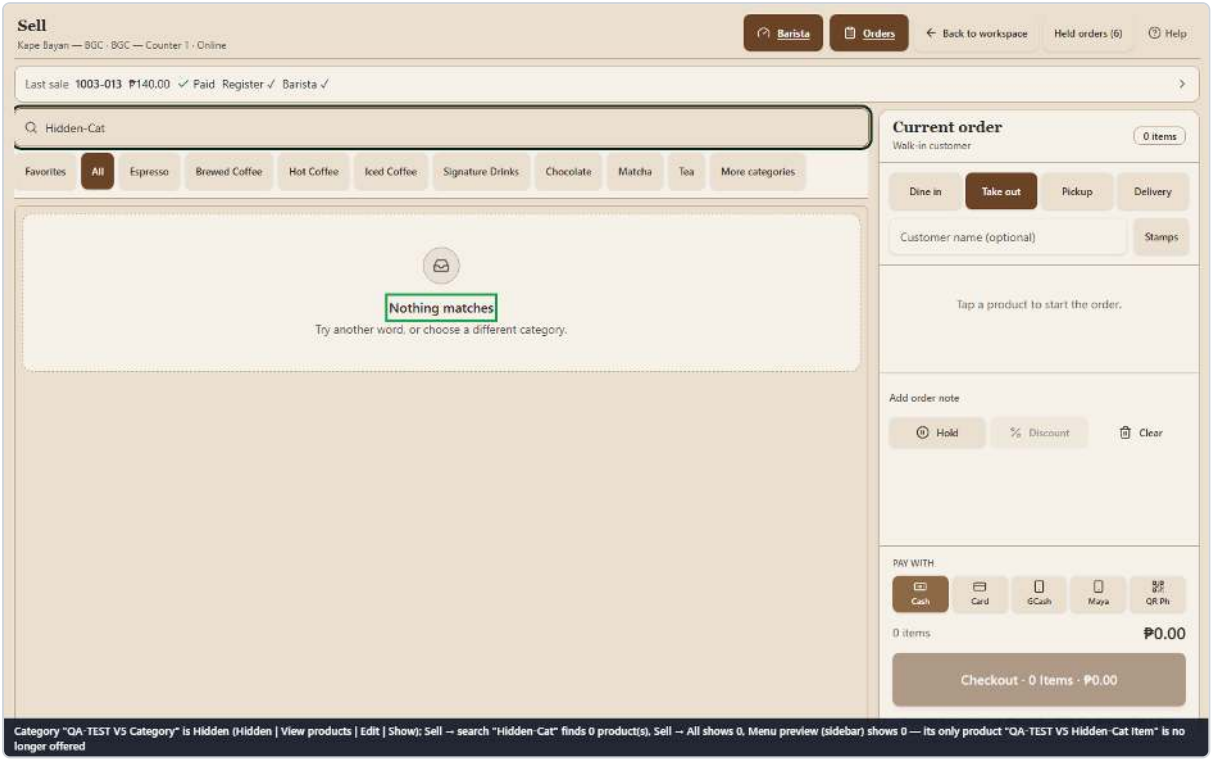

FUN-69 (1 of 2) · fixed (V5, 3 Oct 2026)

FUN-69 (2 of 2) · fixed (V5, 3 Oct 2026)

FUN-12 · Hiding a category does not hide its products from the register MEDIUM

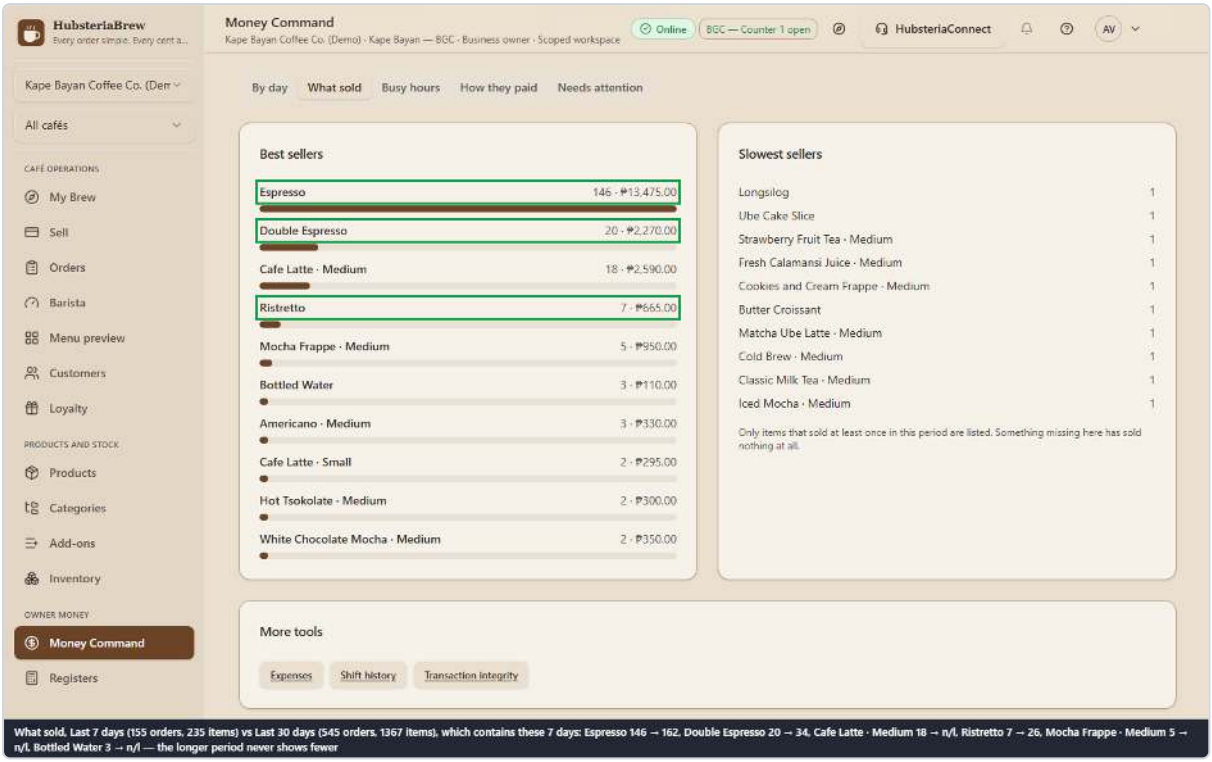

Fixed Now verified with a clean before/after: "QA-TEST V5 Hidden-Cat Item" (only in "QA-TEST V5 Category") was on Sell (All and search) and in Menu preview before the category was hidden, and disappeared from all three right after "Hidden from the menu."

FUN-12: fixed (V5, 3 Oct 2026)

FUN-39 · Money Command "What sold" under-counts longer periods: This month shows fewer Espressos than Last 7 days MEDIUM

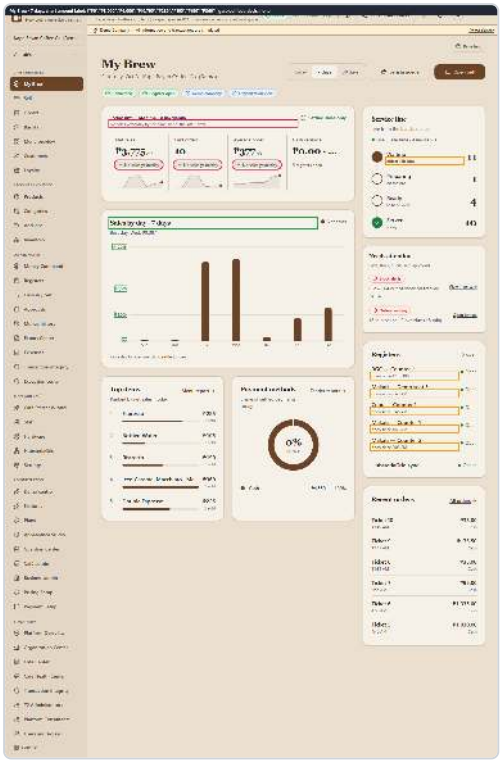

Fixed Counts now nest: Last 7 days (155 orders) shows Espresso 146, Double Espresso 20, Ristretto 7; Last 30 days (545 orders), which contains it, shows 162, 34 and 26. This month (1–3 Oct) also fits inside Last 7 days. Items outside both top-10 lists could not be compared.

FUN-39: fixed (V5, 3 Oct 2026)

FUN-72 · My Brew sales chart shows a garbled amount: "₱10,262.1.1641532182693481e-10" MEDIUM

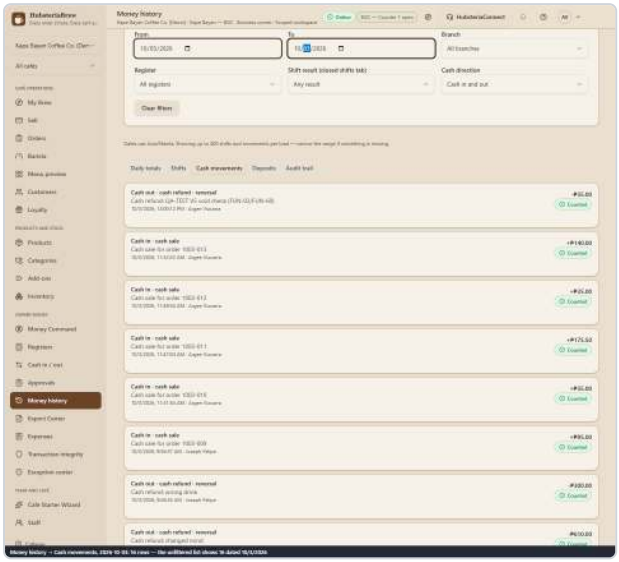

Fixed The garbled float label is gone. My Brew was redesigned: the Today "Sales by hour" axis reads ["₱0","₱550","₱1,100","₱2,087"], 7 days tops at "₱10,795" and 30 days at "₱20,539"; no float fragments.

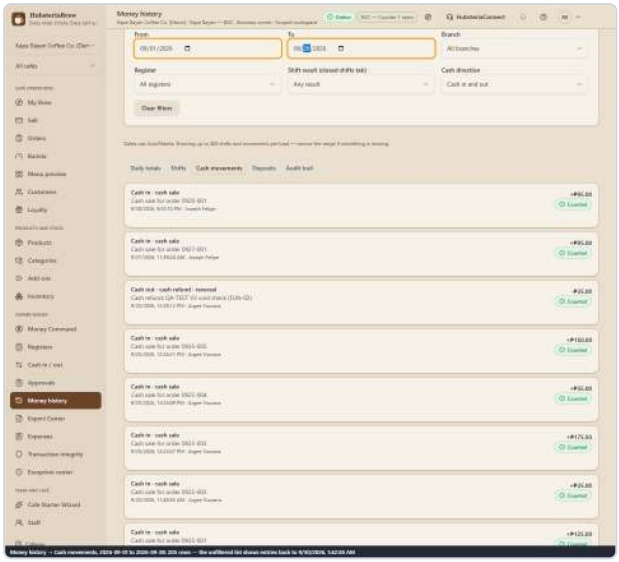

FUN-72: fixed (V5, 3 Oct 2026)

FUN-73 · Money history date filter hides most cash movements (30 Sep: 2 of 76 shown; 1–28 Sep: none) MEDIUM

Fixed Money history → Cash movements date filter now returns every movement for the range: today 16 (the unfiltered list also has 16 for today), 30 Sep 81, and 1–28 Sep 205 rows (V4: 2, and none). A note now says "Dates use Asia/Manila. Showing up to 400 … per load".

FUN-73 (1 of 2) · fixed (V5, 3 Oct 2026)

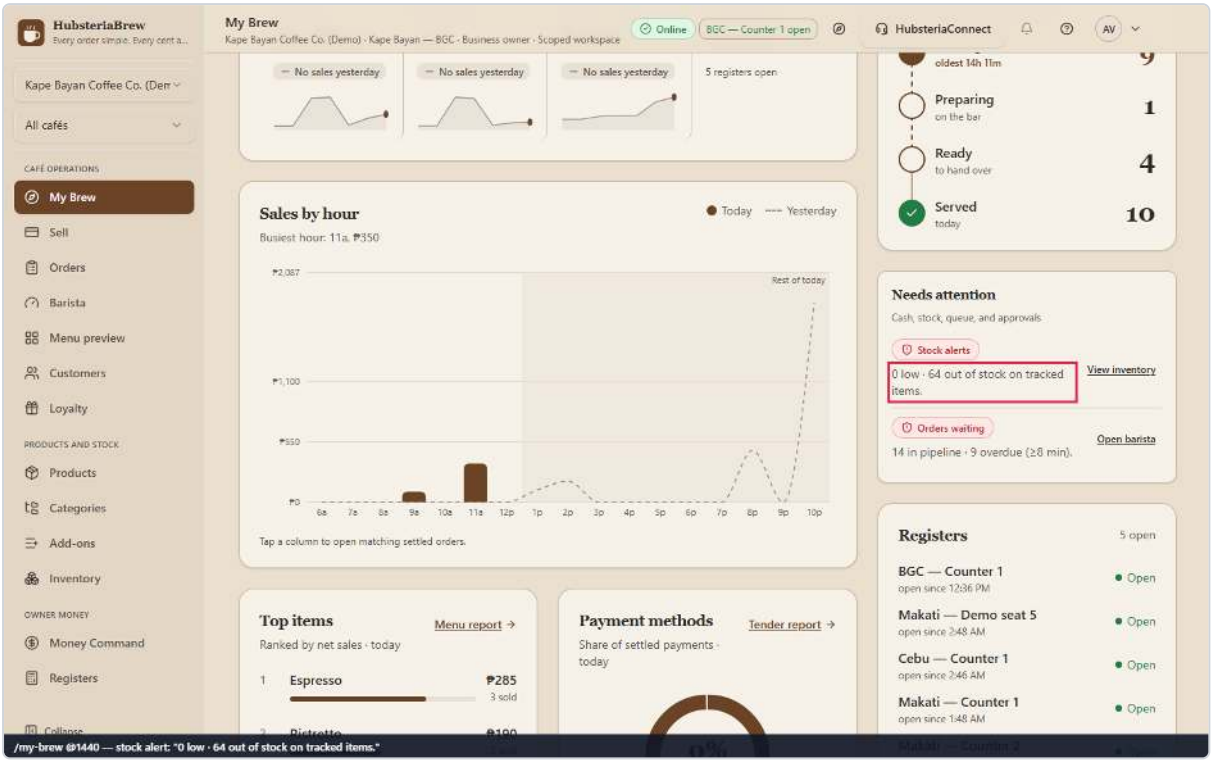

FUN-73 (2 of 2) · fixed (V5, 3 Oct 2026)

UI-26 · My Brew shows "Low stock 0" while 65 ingredients are out of stock

MEDIUM

Fixed Fixed by the My Brew redesign: "Needs attention › Stock alerts" now reads "0 low · 64 out of stock on tracked items.", matching Inventory's "Out of stock" list.

UI-26: fixed (V5, 3 Oct 2026)

SEO-07 · robots.txt now blocks four public sales pages (/demo, /features, /inventory, /loyalty) listed in the sitemap

MEDIUM

Fixed Fixed: the four Disallow lines for /demo, /features, /inventory and /loyalty are gone from robots.txt; the pages are crawlable, listed in sitemap.xml and say "index, follow". No sitemap URL is blocked.

robots.txt no longer blocks /demo, /features, /inventory or /loyalty

https://hubsteriabrew.com/robots.txt and https://hubsteriabrew.com/sitemap.xml · captured 2026-10-03 (V5 re-test)

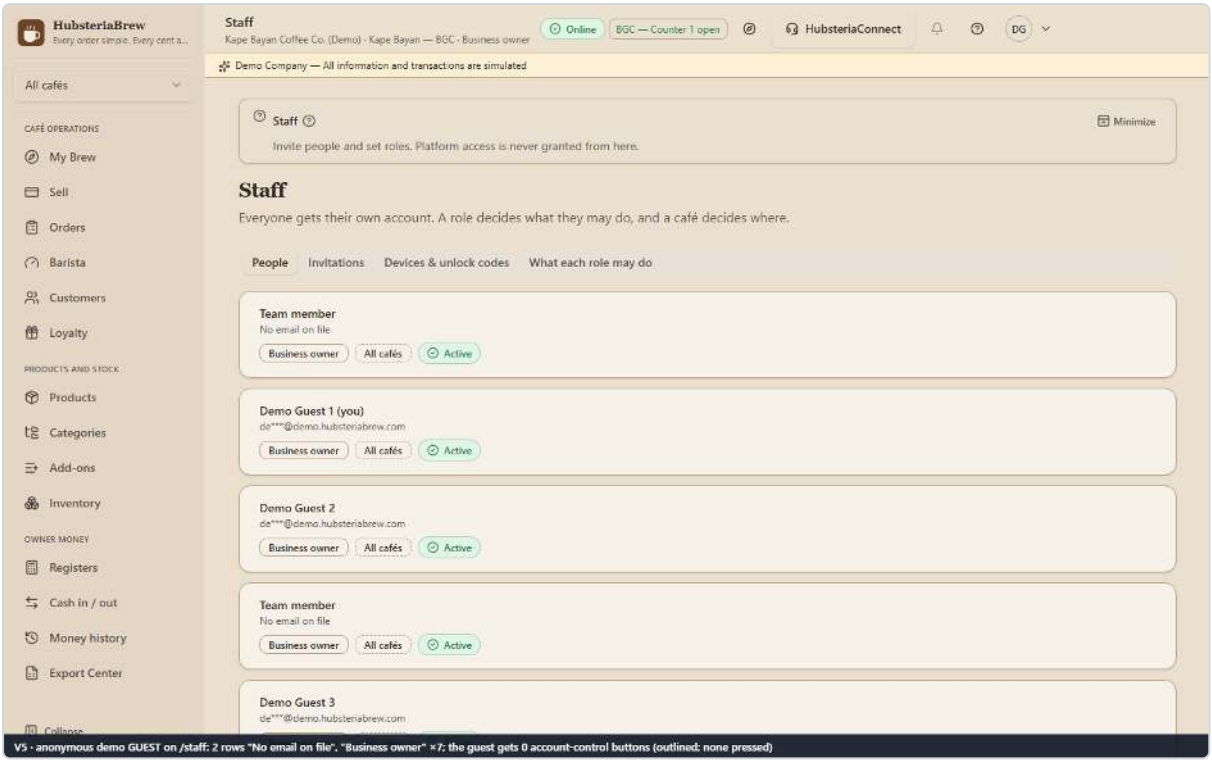

Public page	HTTP	robots.txt (Google longest match)	sitemap.xml	meta robots
/demo	200	allowed	listed	index, follow
/features	200	allowed	listed	index, follow
/inventory	200	allowed	listed	index, follow
/loyalty	200	allowed	listed	index, follow
Lines removed since V4	Disallow: /demo Disallow: /features Disallow: /inventory Disallow: /loyalty			

robots.txt today has 25 Disallow lines; sitemap.xml lists 16 URLs, 0 of them blocked.

SEO-07: fixed (V5, 3 Oct 2026)

SEC-01 · Public demo guests can still open the role editor of two real owner accounts MEDIUM

Fixed Fixed: a public demo guest's Staff page no longer has any "Edit role & café" button (0 account controls on 7 rows), so the role editor of the two real accounts can no longer be opened. They are still listed, anonymised, as "Team member · No email on file".

SEC-01: fixed (V5, 3 Oct 2026)

Findings by Category

This section lists every issue that is **open in V5**, each with its status tag next to the severity badge:

- **Carried over from V4:** Still open Partially fixed Regressed or Not verifiable. They keep their V4 ID.
- **New in V5:** New. Their IDs continue each category's numbering.

Fixed findings are listed in *Changes since V4* and *Fix Verification*.

Category	Critical	High	Medium	Low	Total

All open findings at a glance

ID	Severity	Status	Finding
FUN-42	HIGH	Still open	Money history Daily totals count cash sales and refunds twice; "Expected in drawer" disagrees with Registers
FUN-67	HIGH	Partially fixed	Shift closed with ₱0 counted against ₱925 in cash sales still shows "Balanced" on Registers and Money history
FUN-80	HIGH	New	A sale paid today from a draft started on 30 Sep (1003-008, ₱305) is filed under 30 Sep in Orders, My Brew and Money…
FUN-17	MEDIUM	Partially fixed	Integrity lists unpaid orders but shows 0 open alerts; Money Command still says "Everything looks healthy"
FUN-20	MEDIUM	Partially fixed	Money trail ledger still lists each cash sale twice as "Money in" and shows raw status codes
FUN-40	MEDIUM	Regressed	"Discounts and free drinks" no longer adds up: Sales after discounts is ₱300 lower than the card explains
FUN-41	MEDIUM	Still open	Money Command day boundaries don't follow the café's calendar: "This month" shows an 8/31 row
FUN-56	MEDIUM	Partially fixed	Pricing Setup still says its prices reach Sell only "when Supabase pricing migrations are applied"
FUN-70	MEDIUM	Still open	Café Starter Wizard in the single-café pilot org still offers "Add another café" and shows a permission error

ID	Severity	Status	Finding
FUN-71	MEDIUM	Still open	Pilot trim is half-applied: all 14 "hidden" modules stay in the sidebar and open normally when clicked
FUN-81	MEDIUM	New	Money history Daily totals has no card for 1–3 Oct; today's sales and voids change the 30 Sep cards instead
FUN-82	MEDIUM	New	My Brew's "Sales by hour" drops sales made before 6 AM, so "Busiest hour" is wrong
FUN-83	MEDIUM	New	The new full-screen Sell, Checkout and Customers pages no longer show which organisation you are in (no "Demo" label)
FUN-21	LOW	Partially fixed	"Back to why HubsteriaBrew" still opens My Brew for logged-in users
FUN-23	LOW	Partially fixed	Help & Learning promises "support links" but offers no way to contact support
FUN-25	LOW	Still open	Notifications bell is a disabled placeholder whose explanation can never be seen
FUN-28	LOW	Partially fixed	Order slip and Cash in / out still show the payment time in the device's time zone (detail page is fixed)
FUN-30	LOW	Partially fixed	Registers give no warning for a shift open for three days, so today's sales are filed under 30 September
FUN-34	LOW	Partially fixed	Loyalty rule still describes the reward two different ways ("Free Cafe Latte" vs "a free drink up to PHP 180")
FUN-36	LOW	Still open	New products are inserted in the middle of the menu, regardless of their category
FUN-44	LOW	Partially fixed	Audit trail still shows internal field names, IDs and "Role not recorded"; category edits omit the name
FUN-46	LOW	Partially fixed	Ready to open counts hidden menu sections ("24 section(s)" with 20 on the menu)
FUN-48	LOW	Partially fixed	Features and Plans still promise "Compare cafés" / "branch comparison", which does not exist
FUN-57	LOW	Partially fixed	Plans still sells Rush Mode, which Features says is not built, and "talk to us" has no link
FUN-62	LOW	Partially fixed	Café admin says terminal names and order are "managed here" but has no controls for them
FUN-66	LOW	Partially fixed	"Takeout cup and bag" (+₱5) is no longer pre-ticked, but still cannot be removed once tapped, even on Dine in
FUN-74	LOW	Partially fixed	My Brew and Help still link to pilot-"hidden" Money Command and Demo centre
FUN-75	LOW	Still open	Automated test entries "[sim:...] cash-in test / cash-out test" sit in the demo café's cash ledger
FUN-76	LOW	Still open	Public Offline POS page shows an internal note: "operators use the repo doc docs/PILOT_TRUTH_SHEET.md"
FUN-77	LOW	Still open	Account menu and organisation switcher list the demo organisation as "Kape Bayan Coffee Co. (Demo) (Demo)"
FUN-78	LOW	Still open	My Brew labels recent sales "Ticket 10" by position, so after a void the numbers point at the wrong order
FUN-79	LOW	Still open	Discount reason example "Senior citizen" steers cashiers to a manual senior discount while Senior/PWD is off
FUN-84	LOW	New	My Brew cards say "No sales yesterday" although yesterday had 8 paid orders (₱2,585)
FUN-85	LOW	New	My Brew's Registers card shows "open since 12:36 PM" with no date for shifts opened 3–4 days ago
FUN-86	LOW	New	After an over-tendered cash sale, the confirmation never shows the change to hand back (only a short toast)

ID	Severity	Status	Finding
FRM-04	HIGH	Not verifiable	Auth email quota: two emails go through, but the sender and higher limit still can't be confirmed from outside
FRM-07	MEDIUM	Partially fixed	"Book a Demo" silently refuses a junk phone number: the button does nothing and no message explains why
FRM-06	LOW	Partially fixed	Some forms still disable Save with no explanation (category name, T2 name, cash in/out ₱0)
FRM-09	LOW	Partially fixed	The T2 invitation form still accepts clearly invalid email addresses ("a b@c.com", "a@b")
FRM-10	LOW	Partially fixed	Sign-up blocks weak passwords on the page; server-side enforcement could not be confirmed
FRM-11	LOW	Partially fixed	Future-dated expenses are blocked on the page only; the database check is still to come
FRM-12	LOW	Partially fixed	"Book a Demo" still prints a server error page as raw HTML ("<html>``<body> Service Unavailable...")
FRM-14	LOW	Still open	Add-ons "Smallest number of choices" still silently turns -1 into 1
FRM-18	LOW	Still open	Validation errors aren't consistently linked to their fields for screen readers
FRM-19	LOW	Partially fixed	Money history still accepts a date range with "From" after "To" and blames the range size
FRM-20	LOW	Partially fixed	Pricing Setup override box silently discards what you type; invalid values stay on screen
FRM-22	LOW	Still open	Add stock item accepts a 14-digit low-stock warning level with no message
UI-06	MEDIUM	Still open	Internal/developer jargon shown on public marketing pages
UI-09	MEDIUM	Partially fixed	Tab bars on phones hide tabs off-screen: Settings (6 of 9), Orders ("Everything"), Money Command
UI-10	MEDIUM	Still open	Money and count figures use old-style serif numerals: "₱0.00" reads as "₱o.oo"
UI-21	MEDIUM	Still open	On phones the category Edit and Hide buttons are pushed off the card and cannot be tapped
UI-22	MEDIUM	Regressed	Signed-in header pushes the account menu off-screen at 1024px and now also at 1280px
UI-39	MEDIUM	New	On phones the new Sell screen hides which café and register you are selling on, and whether it is online
UI-02	LOW	Partially fixed	Sell order panel still shows only 2 of 3 order lines on iPad landscape and small laptops
UI-05	LOW	Partially fixed	Homepage hero mock-up still shows blank product images and "—" values
UI-08	LOW	Partially fixed	Product pages are still very short (40–80 words) with little to explain the feature
UI-11	LOW	Partially fixed	On phones the Orders filters still push every order below the fold
UI-13	LOW	Partially fixed	Homepage still repeats the same blocks (tagline ×3, feature titles ×2)
UI-15	LOW	Partially fixed	Placeholder in the "Primary need" field is still slightly cut on phones
UI-19	LOW	Still open	Half-transparent "Add an item" bar sits over product names and prices on phones and tablets
UI-23	LOW	Partially fixed	Order detail header still truncates the order time on phones
UI-24	LOW	Partially fixed	Inconsistent action styling: plain-text "Mark sold out"/"Hide" next to bordered buttons

ID	Severity	Status	Finding
UI-25	LOW	Still open	Inconsistent naming, spelling and internal jargon in the UI
UI-28	LOW	Partially fixed	Export Center and Transaction integrity still show developer notes: repo file path, a staff name, check codes
UI-29	LOW	Partially fixed	Plans and Café Starter Wizard still show the generic "This page" help card
UI-30	LOW	Partially fixed	Guardian Center still shows migration IDs, "Supabase" and release-process notes to café owners
UI-31	LOW	Partially fixed	Payment Setup still shows webhook and hosting-provider details to café owners
UI-36	LOW	Still open	Public header: brand name cut to "Hubst…" on phones and the trial button shown twice on tablets
UI-37	LOW	Still open	Organisation switcher cuts the café name mid-word ("Kape Bayan Coffee Co. (Dem") with no "…"
UI-38	LOW	Still open	Phone bottom bar: the "Money Command" label wraps to two lines and sits lower than the other tabs
UI-40	LOW	New	On laptops the Checkout help card pushes the complete-sale button below the screen until it is minimized
UI-41	LOW	New	Phone and tablet order sheet hides Hold, Discount and Clear under the Pay-with footer
UI-42	LOW	New	Small tap targets on the new Sell order sheet and Checkout (16px close button, 21px "Edit")
UI-43	LOW	New	My Brew "Cash variance" card cuts its status to "₱0.00 · …", hiding "Balanced"
UI-44	LOW	New	On phones the demo notice is cut to "All information and transa…", hiding the words "are simulated"
NET-09	MEDIUM	New	Sell shows no product photos: all 59 photo thumbnails (/stock/…-300.webp) answer 404
NET-02	LOW	Partially fixed	Consultant Summary now loads, but "Cafés in scope 1" undercounts the cafés of its 2 organizations
NET-06	LOW	Still open	Same API requests fired several times per page load (redundant fetching)
NET-07	LOW	Partially fixed	Signed-in pages still make 46–110 requests per load (Sell 110)
NET-08	LOW	Partially fixed	Most signed-in pages still throw a JavaScript error on load (React error #418)
NET-10	LOW	New	Settings counts every payment on each visit: the request takes 5–8 s and failed (HTTP 500) on 2 of 5 loads
NET-11	LOW	New	Platform Transaction Integrity page never loads its checks: it asks for a database column that does not exist
PERF-01	MEDIUM	Partially fixed	Sell screen still slow on phones (LCP 4.01 s / 4.06 s): first photo waits behind 2.0 MB of photos
PERF-03	MEDIUM	Partially fixed	My Brew, Products and Registers still jump (desktop CLS up to 1.13); Sell and Orders are now stable
PERF-04	MEDIUM	Regressed	Every page loads more JavaScript than in V4, including 888 KiB of back-office code on the login page
PERF-05	MEDIUM	Still open	Product photos are still 800-px files (~1.5 MB avoidable on Sell phones); new small size is missing (404)
PERF-08	LOW	Partially fixed	Checkout still waits on 6 server calls in a row (~1.9 s; V4 ~2.3 s), the same chain as in V4
A11Y-03	LOW	Partially fixed	Drink options: "Required" (Milk choice, Sweetness) is marked with an attribute screen readers ignore

ID	Severity	Status	Finding
A11Y-04	LOW	Partially fixed	Owner invitations: the Organization dropdown has no accessible name
A11Y-08	LOW	Partially fixed	Heading levels skip (h1 → h3) on Sell and Money Command, and some screens still have two main headings
A11Y-10	LOW	Partially fixed	Small touch targets remain (20×20 px help icons, 72×16 px "Demo Center" link) on a touch-first POS
A11Y-11	LOW	Partially fixed	Closing the Clear order, Add customer or Request a feature dialog does not return focus to its button
A11Y-14	LOW	Regressed	Appearance Studio: an invalid colour code is shown in red but not linked to the field or announced
A11Y-16	LOW	Still open	Every signed-in page now has two "banner" landmarks (the demo notice was wrapped in a second `<header>`)
A11Y-18	LOW	New	Full-screen Sell, Orders, Barista and Customers have no main heading; Sell has no headings at all
A11Y-19	LOW	New	"Back to workspace" on Sell is announced as "Return to Sell workspace" (spoken name differs from the label)
A11Y-20	LOW	New	Going from Sell to Checkout (and back) drops keyboard focus to the page; 13 Tab presses to reach "Exact"
A11Y-21	LOW	New	Checkout: the chosen cash amount and the change due are not announced to screen readers
A11Y-22	LOW	New	Small status text fails contrast: header "Counter open" chip (3.98:1) and amber warning badges (4.37:1)
A11Y-23	LOW	New	My Brew "Sales by hour": "Tap a column to open matching settled orders" works only with a mouse or touch
A11Y-24	LOW	New	Appearance Studio nests two extra `<main>` regions in its live preview, and the "Themes" list has no list items
A11Y-25	LOW	New	After a discount, the cart tells screen-reader users the old total (₱100.00 instead of ₱90.00)
SEO-03	LOW	Partially fixed	App routes still send no noindex in the server HTML, and 11 (e.g. /consultant, /help) are not in robots.txt
SEO-04	LOW	Partially fixed	Forgot-password H1 is still just the brand name, and the noindex sign-in page is still listed in sitemap.xml
SEO-05	LOW	Partially fixed	Four page titles are still very short (/contact, /security, /privacy, /terms)
SEC-02	MEDIUM	Still open	CSP still allows inline scripts ('unsafe-inline'), and the session token is still in localStorage
SEC-14	MEDIUM	New	Consultant account now sees the 18-page master-admin "T1 Platform" menu, which its own help calls admin-only
SEC-05	LOW	Partially fixed	www → apex redirect is still temporary (307)
SEC-09	LOW	Partially fixed	Anonymous speed samples go through a public database function; its validation and rate limit are unknown
SEC-12	LOW	Still open	Security headers still trust an outside video service, including camera and microphone, that no page uses
SEC-13	LOW	Still open	Terms and Privacy Policy changed after V3 but still say "In effect since 24 September 2026"

Functional

FUN-42 · Money history Daily totals count cash sales and refunds twice; "Expected in drawer" disagrees with Registers HIGH

Severity: HIGH **Page:** `https://hubsteriabrew.com/money-history`

Re-test (V5): Still open Unchanged: Money history → Daily totals still adds "Cash sales" on top of "Cash in" (which already holds every cash sale). Makati 30 Sep: ₱0 + ₱95 + ₱295 − ₱60 = expected ₱330, while Registers expect ₱235 for the same two open shifts. A ₱35 void today raised the BGC card's Cash out by ₱70.

Description: Money history → Daily totals cards still add the "Cash sales" figure to "Cash in" and "Cash out", which already contain a line for every cash sale and refund. Makati, 30 Sep: opening ₱0 + cash sales ₱95 + cash in ₱295 − cash out ₱60 = "Expected in drawer ₱330"; Registers expect ₱235 (₱185 + ₱50) for the same two shifts. After our ₱35 test sale was voided today, the 30 Sep BGC card went from Cash sales ₱13,768 / Cash out ₱1,980 / Expected ₱19,391 to ₱13,733 / ₱2,050 / ₱19,286: the refund is counted twice. That card still reads "Balanced ₱0.00" next to Expected ₱19,286 and Counted ₱5,005.

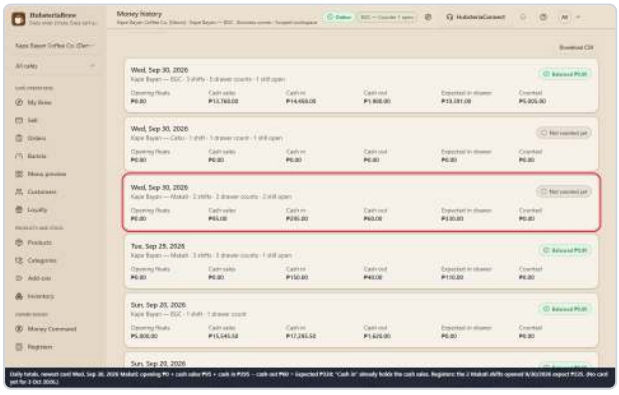

Steps to reproduce:

1. Money history → Daily totals: read the 30 Sep Makati and BGC cards.
2. Registers (view only): add up "Expected in drawer" for the Makati shifts opened 30 Sep.
3. Re-read the BGC card after a cash void (our test void of 1003-012).

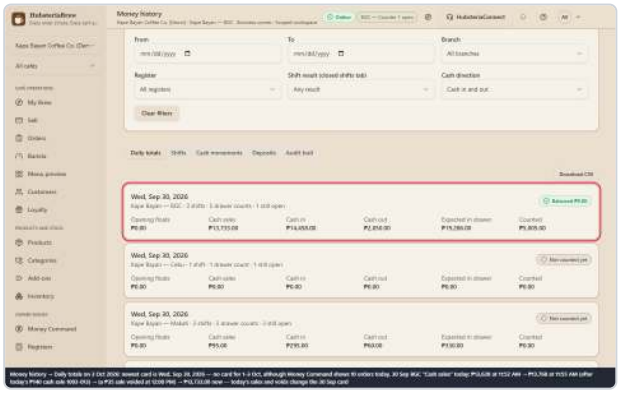

Expected: Opening + cash in − cash out = expected, with each cash sale and refund counted once, matching Registers and Cash in / out.

Actual: Makati 30 Sep: opening ₱0 + cash sales ₱95 + cash in ₱295 − cash out ₱60 = expected ₱330; Registers: ₱50 + ₱185 = ₱235. BGC 30 Sep after our ₱35 void: cash sales ₱13,768 → ₱13,733, cash out ₱1,980 → ₱2,050, expected ₱19,391 → ₱19,286, counted ₱5,005, badge "Balanced ₱0.00".

Suggested fix: Build each card from the shifts' own cash movements, counting each sale and refund once (show "Cash sales" as part of "Cash in", not in addition), so the card matches Registers; name the order on refund lines.

FUN-42 (1 of 2) · V5, 3 Oct 2026

FUN-42 (2 of 2) · V5, 3 Oct 2026

FUN-67 · Shift closed with ₱0 counted against ₱925 in cash sales still shows "Balanced" on Registers and Money history HIGH

Severity: HIGH **Page:** `https://hubsteriabrew.com/registers`

Re-test (V5): Partially fixed Better: the two shifts closed with no count at all (BGC and Cebu, opened 9/20) now read "Not counted" on Registers and Money history. Still wrong: BGC — Counter 1, 2:34 → 2:42 AM on 30 Sep (₱925 cash sales, closed with ₱0.00 counted) still shows "Closed · Balanced" on Registers and "Expected ₱0.00 · Counted ₱0.00 · Balanced ₱0.00" on Money history, while Money Command says Short -₱925.00.

Description: Shifts closed without any count now say "Not counted" (Registers: "Closed · Not counted"; Money history → Shifts: "Not counted", Expected —, Counted —). But BGC — Counter 1 (2:34–2:42 AM, 30 Sep) took ₱925 in cash and was closed with ₱0.00 counted. Registers → Recently closed shows "counted ₱0.00 · Closed · Balanced", and Money history → Shifts shows "Expected ₱0.00 · Counted ₱0.00 · Balanced ₱0.00". Money Command → Drawer & register shows the same shift as Expected ₱925, Counted ₱0.00, "Short -₱925.00", yet labels it only "Small variance — acknowledge". An owner checking Registers or Money history still sees no shortage.

Steps to reproduce:

1. Registers → "Recently closed" (view only).
2. Money history → Shifts; find "BGC — Counter 1 · 9/30/2026, 2:34:12 AM → 2:42:45 AM".
3. My Brew → sidebar "Money Command" → Drawer & register → choose "BGC — Counter 1 · Closed · 9/30/2026, 2:34:12 AM".
4. Compare Expected, Counted and the result.

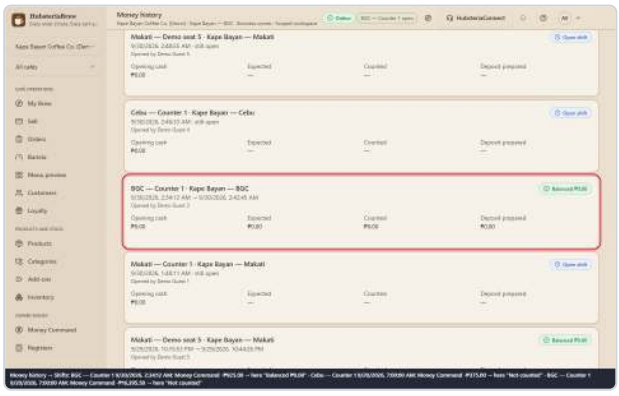

Expected: A shift closed with less cash than expected is shown as Short (with the amount) on every screen; a shift closed without a count says "Not counted", never "Balanced".

Actual: Registers: BGC — Counter 1, closed 30 Sep 2:42 AM, counted ₱0.00 → "Closed · Balanced" (two other no-count shifts now say "Not counted"). Money history: the same shift → "Balanced ₱0.00". Money Command: sales ₱925.00, expected ₱925.00, counted ₱0.00, −₱925.00, "Small variance — acknowledge".

Suggested fix: Compute the closing result on the server from the same expected cash that Drawer & register uses, store it with the shift, and show it everywhere; never label a shift "Balanced" when its expected cash is unknown or when no closing count was entered.

FUN-67 (1 of 2) · V5, 3 Oct 2026

FUN-67 (2 of 2) · V5, 3 Oct 2026

FUN-80 · A sale paid today from a draft started on 30 Sep (1003-008, ₱305) is filed under 30 Sep in Orders, My Brew and Money Command HIGH

Severity: HIGH **Page:** `https://hubsteriabrew.com/orders`

Re-test (V5): New First found in this V5 audit.

Description: Order 1003-008 (₱305) was paid in cash at 9:22 AM on 3 Oct: "Served · Paid", and Cash in / out and the Money trail record its ₱305 on 3 Oct. But Orders → Everything for today skips it (it jumps from 1003-009 to 1003-007), and My Brew and Money Command leave it out of today's orders and net sales. Filtering Orders to 30 Sep finds it: the order was started as a draft on 30 Sep at 3:01 AM and only paid today, and the lists and reports file it by the day the draft was created. The cash is not lost, but today's sales look ₱305 too low and the closed 30 Sep ₱305 too high.

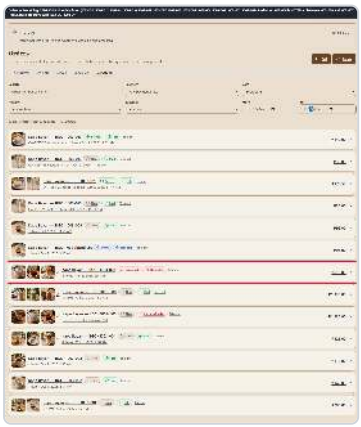

Steps to reproduce:

1. Orders → Everything; set From = To = 3 Oct; look between 1003-009 and 1003-007.
2. Search "1003-008" and open it: Served · Paid, paid 3 Oct 9:22 AM.
3. Set From = To = 30 Sep and search again: the order is listed there.
4. Compare with Cash in / out and My Brew / Money Command for Today.

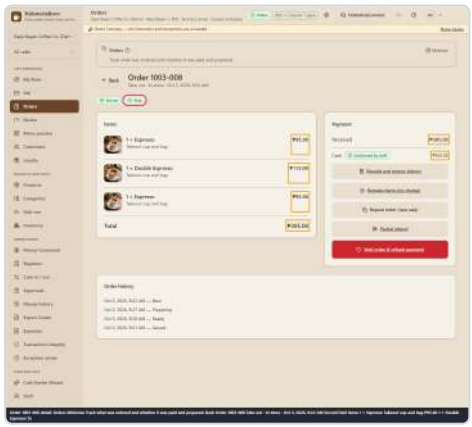

Expected: A sale counts on the day it was paid (or the day it was placed), the same way in Orders, My Brew, Money Command and the cash ledger.

Actual: Orders today: ["1003-013","1003-012","1003-011","1003-010","1003-009","1003-007","1003-006","1003-005","1003-004","1003-003","1003-002","1003-001"] (1003-008 listed: false); Served tab starts ["1003-013","1003-011","1002-002"]. Search row: "Kape Bayan — BGC · 1003-008 Served Paid Take out 3 items · Oct 3, 2026, 9:22 AM ₱305.00". Detail: " Takeout cup and bag ₱95.00 1 × Double Espresso Takeout cup and bag ₱115.00 1 × Espresso Takeout cup and bag ₱95.00 Total ₱305.00 Payment Received ₱305.00 Cash Confirmed by staff ₱305.00 Receipt and money history Remake items (no charge) Repeat order". Money Command 10/3/2026, 11:52:38 AM: 10 orders, before discounts ₱4,095.00 (= the 10 listed orders + ₱19.50 discount), after ₱3,775.50, received ₱4,380.50; Busy hours 9am "1 · ₱95.00" (1003-009 only).

Suggested fix: File orders by the time they were placed and paid (submitted_at), not by when the draft row was created, in the Orders filter and in every sales report; add a daily check that paid orders equal payments received minus refunds.

FUN-80 (1 of 2) · V5, 3 Oct 2026

FUN-80 (2 of 2) · V5, 3 Oct 2026

FUN-17 · Integrity lists unpaid orders but shows 0 open alerts; Money Command still says "Everything looks healthy" MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/integrity`

Re-test (V5): Partially fixed Unchanged since V4: Transaction integrity lists unpaid-order warnings (served_unpaid 28, pipeline_unpaid 1), but OPEN ALERTS still reads 0, and Money Command's "Needs attention" still says "Everything looks healthy" while its Last 30 days summary says "Some sales are not fully paid yet — check unpaid orders before you close."

Description: Transaction integrity (opened from the sidebar; still reachable in the pilot) checks live orders and lists 28 "served but payment is still unpaid" and 1 "submitted with payment still unpaid" warnings. The four counters at the top still read OPEN ALERTS 0 and CRITICAL ALERTS 0. On Money Command (Last 30 days) the summary says "Some sales are not fully paid yet — check unpaid orders before you close.", but the "Needs attention" tab says "Everything looks healthy". An owner who reads the counters or that tab still gets the all-clear.

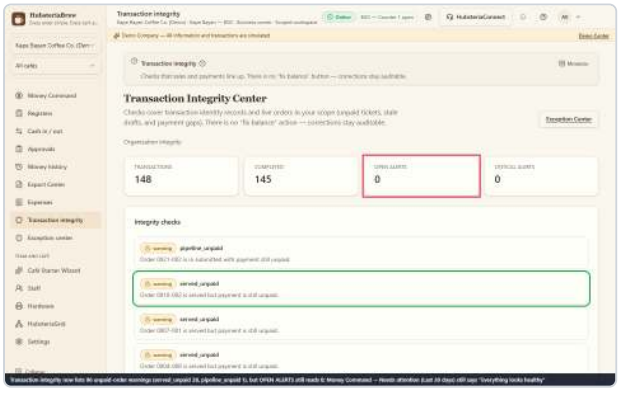

Steps to reproduce:

1. My Brew → sidebar "Transaction integrity" (a typed /integrity link redirects in the pilot).
2. Read the four counters and the "Integrity checks" list.
3. Sidebar → Money Command → Last 30 days; read the summary and the "Needs attention" tab.

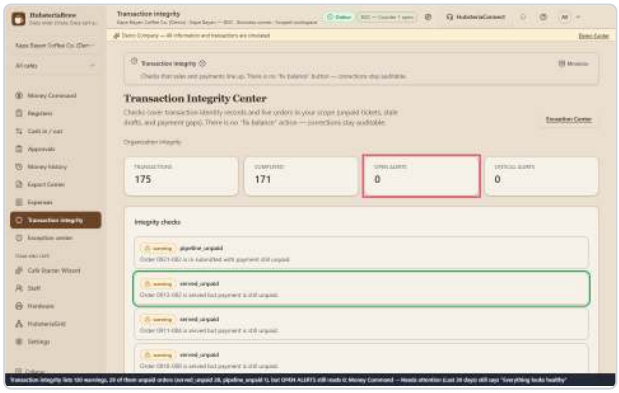

Expected: The alert counters include the unpaid-order warnings, and Money Command's "Needs attention" lists the unpaid orders its summary mentions.

Actual: /integrity counters: {"TRANSACTIONS":"172","COMPLETED":"168","OPEN ALERTS":"0","CRITICAL ALERTS":"0"}; list: 120 "warning" rows (served_unpaid 28, pipeline_unpaid 1). Money Command Last 30 days: "Some sales are not fully paid yet — check unpaid orders before you close."; Needs attention: "Everything looks healthy".

Suggested fix: Count the live-check warnings in OPEN ALERTS (or rename the counter to what it counts), and feed the same unpaid-order check into Money Command's "Needs attention" tab and the "Everything paid" badge.

FUN-17 (1 of 2) · V4

FUN-17 (2 of 2) · V5, 3 Oct 2026

FUN-20 · Money trail ledger still lists each cash sale twice as "Money in" and shows raw status codes MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/money-command`

Re-test (V5): Partially fixed Unchanged since V4: Money trail still lists every cash sale twice as "Money in" (today's QA sale 1003-010 appears as "Cash sale · 1003-010" and "Money in · cash sale", both + ₱35.00) and still shows raw status codes (manually_confirmed, not_required, partially_refunded). Refunds are listed twice the same way.

Description: Money Command (opened from the sidebar) → Money trail shows each cash sale as a "Cash sale · `<order>`" row and a "Money in · cash sale" row with the same time and amount: 170 such pairs in the first 399 rows, including today's QA sale 1003-010 (11:31 AM, +₱35.00 twice). Cash refunds appear as "Refund" plus "Money out · cash refund". The ledger CSV has the same pairs. The Employee column is "—" on sale rows, but the Status column still shows codes such as "manually_confirmed", "not_required" and "partially_refunded".

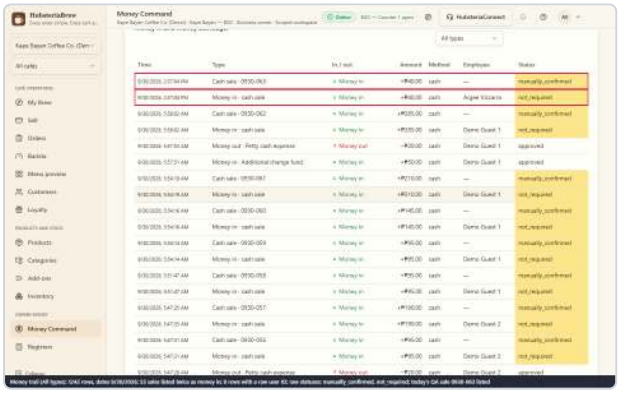

Steps to reproduce:

1. My Brew → sidebar "Money Command" → "Money trail" tab.
2. Compare consecutive rows with the same time and amount.
3. Click "Export ledger CSV".

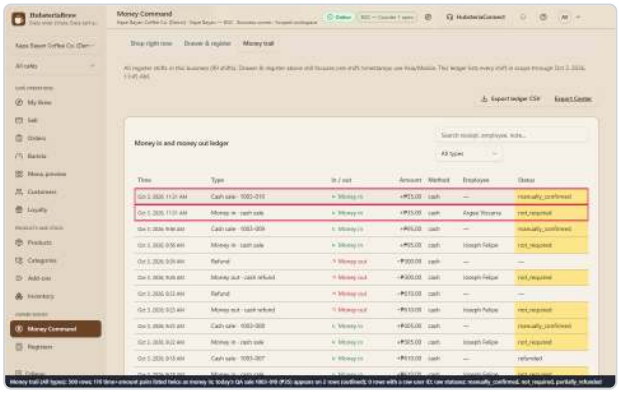

Expected: Each sale appears once as money in; employees shown by name and statuses in plain words.

Actual: Rows read: 399 of 500 shown; time+amount pairs: 170; 1003-010: Oct 3, 2026, 11:31 AM | Cash sale · 1003-010 | Money in | +₱35.00 | cash | — | manually_confirmed / Oct 3, 2026, 11:31 AM | Money in · cash sale | Money in | +₱35.00 | cash | (staff name) | not_required; raw statuses: manually_confirmed, not_required, partially_refunded. CSV data/downloads/admin-ledger-money-ledger-2026-10-03T11_45.csv: 1461 lines; first two data lines are 1003-010 twice ("cafe_order_payments" and "cafe_cash_movements").

Suggested fix: De-duplicate the ledger view (show the payment and its drawer movement as one line, or mark the drawer row as "linked — not counted"), make sure the CSV export and any totals use the de-duplicated set, and resolve user IDs and status codes to display labels.

FUN-20 (1 of 2) · V4

FUN-20 (2 of 2) · V5, 3 Oct 2026

FUN-40 · "Discounts and free drinks" no longer adds up: Sales after discounts is ₱300 lower than the card explains MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/money-command`

Re-test (V5): Regressed Broken again: Today before ₱4,060.00 − after ₱3,740.50 = ₱319.50, but the card shows ₱19.50; Last 30 days ₱1596.50 vs ₱1,296.50. The ₱300 difference matches today's ₱300 cash refund (9:26 AM), which "Sales after discounts" appears to deduct without saying so.

Description: In V4 the card equalled "Sales before discounts" minus "Sales after discounts". Today it does not. Money Command → Today: before ₱4,060.00, "Discounts and free drinks" ₱19.50 ("Manual discounts ₱19.50 · loyalty rewards ₱0.00."), after ₱3,740.50, so ₱300.00 of the reduction is unexplained; Free of charge is 0. Last 30 days shows the same ₱300.00 gap. The gap matches the ₱300 cash refund made at 9:26 AM today (the ledger also shows a "partially_refunded" status): "Sales after discounts" appears to deduct it, while no card says so (Refunds given ₱910 counts it separately). The same refund makes My Brew's Payment methods ("Cash ₱4,485") exceed its Net sales (₱3,880.50), while Money Command's banner still says "Money received matches what you sold".

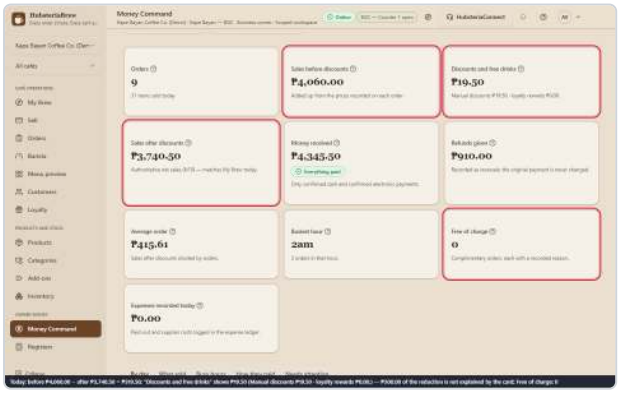

Steps to reproduce:

1. My Brew → sidebar "Money Command" (period Today).
2. Read Sales before discounts, Discounts and free drinks (with its note), Sales after discounts and Free of charge.
3. Repeat for "Last 30 days"; compare with Money trail refunds today.

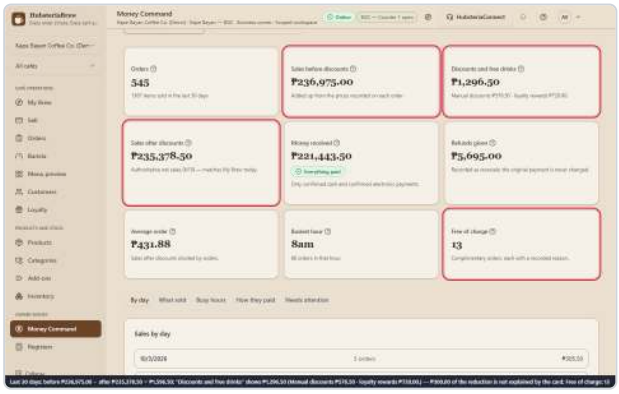

Expected: "Discounts and free drinks" = Sales before − Sales after (₱1,739.50 for Last 30 days), with the loyalty part shown as a subset.

Actual: Today: {"before":"₱4,060.00","disc":"₱19.50","note":"Manual discounts ₱19.50 · loyalty rewards ₱0.00.","after":"₱3,740.50","free":"0","refunds":"₱910.00","gap":319.5}. Last 30 days: {"before":"₱236,975.00","disc":"₱1,296.50","note":"Manual discounts ₱576.50 · loyalty rewards ₱720.00.","after":"₱235,378.50","gap":1596.5}. Money trail today: "Refund −₱300.00" + "Money out · cash refund −₱300.00" at 9:26 AM; status "partially_refunded" in the ledger.

Suggested fix: Make "Sales after discounts" = before − discounts − free drinks, and show partial refunds only under "Refunds given"; or add a "Partial refunds" line so the three cards always reconcile.

FUN-40 (1 of 2) · V5, 3 Oct 2026

FUN-40 (2 of 2) · V5, 3 Oct 2026

FUN-41 · Money Command day boundaries don't follow the café's calendar: "This month" shows an 8/31 row MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/money-command`

Re-test (V5): Still open By day still groups by UTC date: with the period "Today" (3 Oct 2026, Asia/Manila; 8 orders) By day shows "10/3/2026 · 2 orders" and "10/2/2026 · 6 orders · ₱3,735" — every sale made before 8 AM today is filed under yesterday.

Description: Money Command (opened from the sidebar) → Today → By day splits today's 8 orders into "10/3/2026 · 2 orders" (the 9:56 and 11:31 AM sales) and "10/2/2026 · 6 orders · ₱3,735" (the orders taken between midnight and 8 AM today, Manila time; My Brew lists tickets at 2:31–4:50 AM). Last 7 days shows the same pattern: "9/29/2026 · 131 orders" and "9/30/2026 · 2 orders", although the busy early-morning trading of 30 Sep belongs to 30 Sep. Day-by-day figures, including month ends, are still wrong.

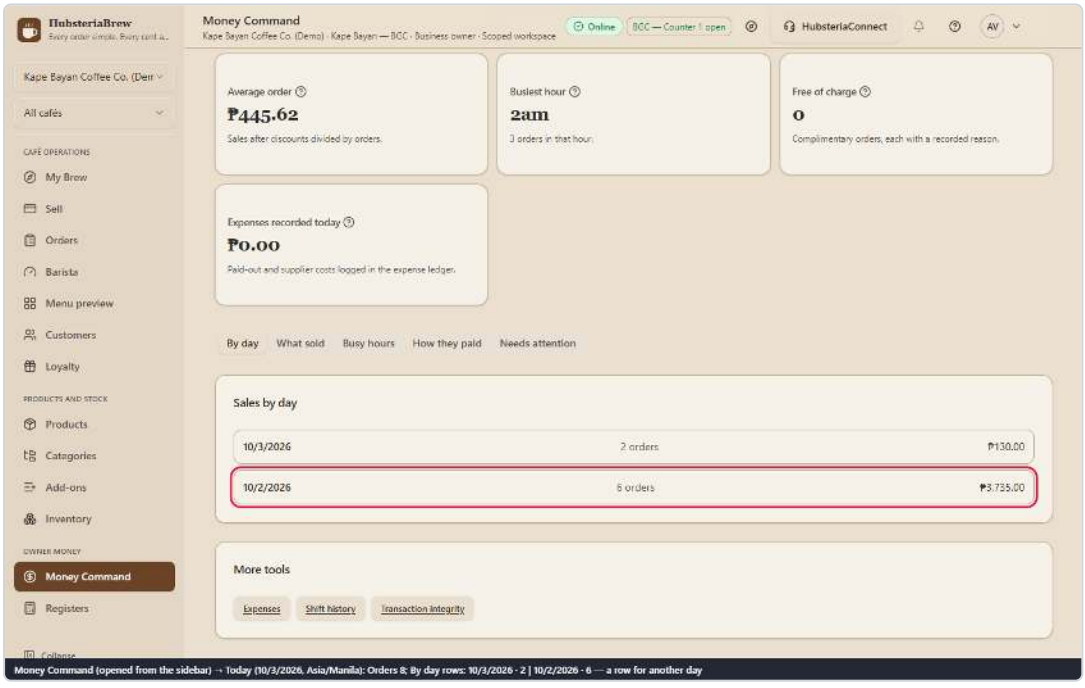

Steps to reproduce:

1. My Brew → sidebar "Money Command" (period "Today") → By day.
2. Compare with the times of today's orders (My Brew ticket list, Money trail).
3. Choose "Last 7 days" → By day.

Expected: By day groups orders by the café's calendar day (Asia/Manila): "Today" shows a single row for today.

Actual: Today → By day: 10/3/2026 · 2 order(s) · ₱130 | 10/2/2026 · 6 order(s) · ₱3735. Last 7 days → By day: 10/3/2026 · 2 | 10/2/2026 · 14 | 10/1/2026 · 3 | 9/30/2026 · 2 | 9/29/2026 · 131 | 9/28/2026 · 1 | 9/27/2026 · 1.

Suggested fix: Compute period boundaries and By day grouping server-side in the café's time zone (date_trunc('month', now() at time zone 'Asia/Manila'), and group on (created_at at time zone 'Asia/Manila')::date).

FUN-41: V5, 3 Oct 2026

FUN-56 · Pricing Setup still says its prices reach Sell only "when Supabase pricing migrations are applied" MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/admin/pricing`

Re-test (V5): Partially fixed Unchanged since V4: Pricing Setup (reached by clicking the sidebar; a typed address still bounces to My Brew) still says overrides use Sell's price resolver "when your Supabase pricing migrations are applied", while Edit product and bulk Preview / Apply preview stay live.

Description: The page still does not tell the owner plainly whether a price changed here is what the register charges. The intro reads "Organization and café overrides use the same price resolver as Sell when your Supabase pricing migrations are applied", which is developer wording an owner cannot check. Meanwhile every product has "Edit product", and the bulk "Adjust by percent" Preview / Apply preview is live. (Read-only: no price was changed.)

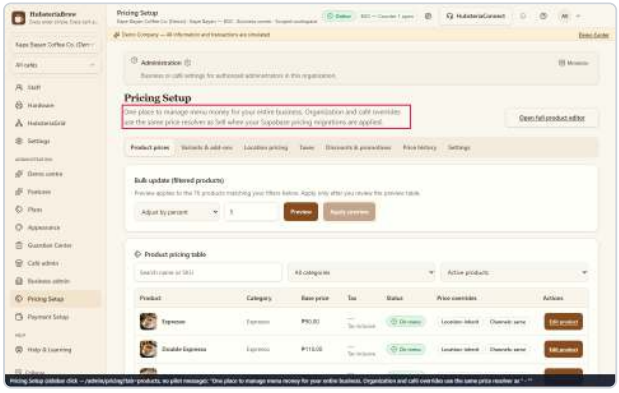

Steps to reproduce:

1. Click Pricing Setup in the sidebar.
2. Read the sentence under the heading.
3. Note "Edit product" and Preview / Apply preview.

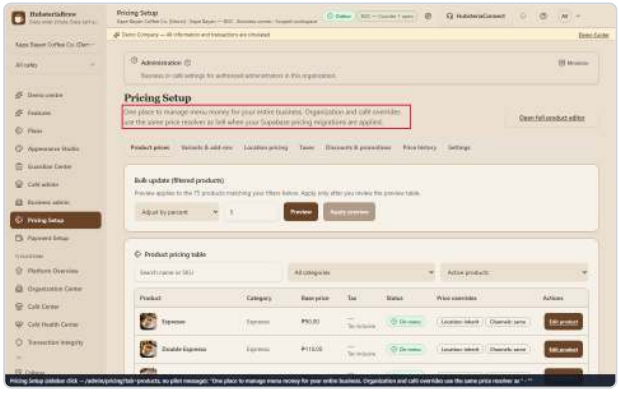

Expected: A plain statement that changes apply at the register, or editing disabled until they do.

Actual: "One place to manage menu money for your entire business. Organization and café overrides use the same price resolver as Sell when your Supabase pricing migrations are applied." · bulk: "Preview applies to the 75 products matching your filters below. Apply only after you review the preview table." · buttons [{"t":"Preview","disabled":false},{"t":"Apply preview","disabled":true},{"t":"Edit product","disabled":false}].

Suggested fix: Replace the conditional with a status the owner can trust ("Prices here are used at the register") or hide editing while not wired.

FUN-56 (1 of 2) · V4

FUN-56 (2 of 2) · V5, 3 Oct 2026

FUN-70 · Café Starter Wizard in the single-café pilot org still offers "Add another café" and shows a permission error MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/starter`

Re-test (V5): Still open Unchanged: in the pilot organisation "HubsteriaBrew" the Café Starter Wizard, step 2 "Your café", still shows "Add another café" with a café-name form and an enabled "Add café" button and no single-café message, while Business admin and Settings → Cafés offer no way to add a café.

Description: In the pilot organisation "HubsteriaBrew", Settings → Cafés and Business admin (sidebar) offer no add-café control. The Café Starter Wizard (sidebar) does not follow the lock: step 2 "Your café" lists "Main branch · Added" and then "Add another café" with Café name, address, city, phone, opening hours, business-day cutoff and an enabled "Add café" button, with no message that the pilot allows only one café. Not verified this round: the V4 permission-error toast, because opening a wizard step saves progress (POST cafe_onboarding_progress) and the QA run blocked that write in the pilot org. "Add café" was not pressed.

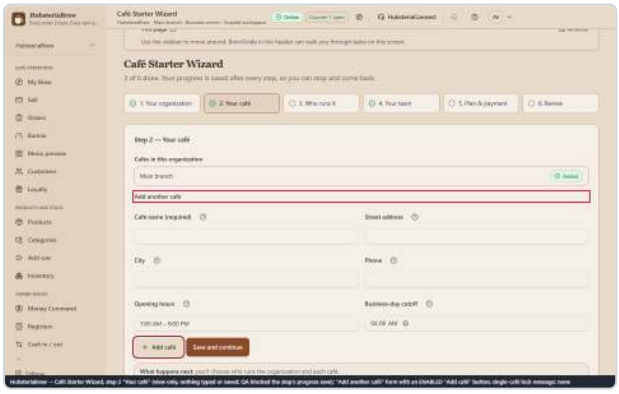

Steps to reproduce:

1. Switch organisation to "HubsteriaBrew" (look only; writes blocked by the QA harness).
2. Open the Café Starter Wizard (/starter; not a pilot-hidden route, the typed address opens it).
3. Click "2. Your café".
4. Look at the form and the "Add café" button (do not press it); compare with Business admin.

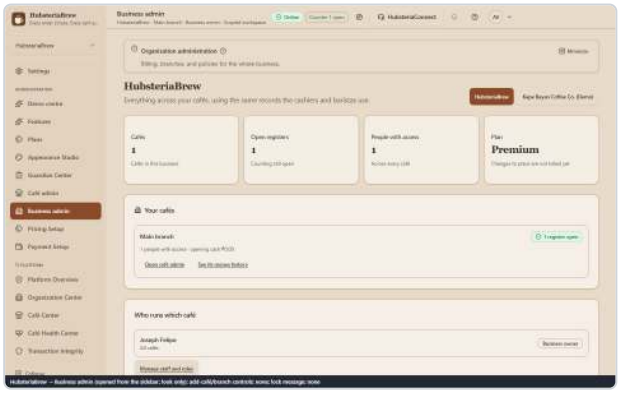

Expected: Under the single-café lock the wizard hides or disables "Add another café" and says why; opening a step never shows a permission error.

Actual: Pilot step 2: "Cafés in this organization | Main branch | Added | Add another café | Café name (required) | Add café"; "Add café" enabled=true; lock text: none. Step-2 click write (blocked): POST /rest/v1/cafe_onboarding_progress. Settings → Cafés add controls: 0; Business admin add controls: 0.

Suggested fix: Apply the single-café policy to the wizard: hide "Add another café" (or show it disabled with "Your pilot plan includes one café"), enforce it in the add-café RPC, and do not write onboarding progress (or fail silently) for a viewer without write access.

FUN-70 (1 of 2) · V5, 3 Oct 2026

FUN-70 (2 of 2) · V5, 3 Oct 2026

FUN-71 · Pilot trim is half-applied: all 14 "hidden" modules stay in the sidebar and open normally when clicked MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): Still open Unchanged since V4: all 14 pilot-hidden modules are still in the sidebar of the demo café, and all 14 in the "HubsteriaBrew" pilot organisation, including "Appearance Studio". A click opens them with no message; a reload of the same address bounces to My Brew.

Description: The pilot note says owners no longer see Money Command, Demo centre, Features, Appearance, Guardian, Pricing Setup, Payment Setup, Transaction integrity, Exception center, Business admin, Café admin, Menu preview, Expenses and Approvals. In both organisations all 14 are still in the sidebar (Appearance as "Appearance Studio"), and clicking one opens the full module with no message. Only a full page load of the same address (bookmark, refresh, typed URL) bounces to My Brew with "This area is hidden during the pilot...". A refresh while on the page throws the owner out.

Steps to reproduce:

1. Sign in as the owner; open My Brew (demo café, then the "HubsteriaBrew" organisation).
2. Look at the sidebar (Owner money, Administration groups).
3. Click "Guardian Center": it opens.
4. Press refresh (or open the same address directly).

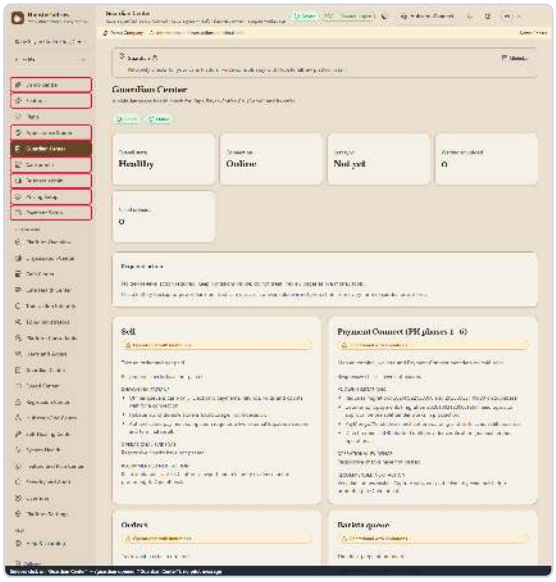

Expected: Hidden modules are removed from the sidebar and blocked on every path; or, if they stay, they open consistently.

Actual: Demo café sidebar: Menu preview, Money Command, Approvals, Expenses, Transaction integrity, Exception center, Demo centre, Features, Appearance Studio, Guardian Center, Café admin, Business admin, Pricing Setup, Payment Setup. Pilot org: 14/14 (missing: []). Click → /guardian ("Guardian Center"), toast: none. Reload → /my-brew, toast "This area is hidden during the pilot.".

Suggested fix: Apply the pilot flag to the sidebar builder and to the client-side router guard (not only the initial page load).

FUN-71 (1 of 2) · V5, 3 Oct 2026

FUN-71 (2 of 2) · V5, 3 Oct 2026

FUN-81 · Money history Daily totals has no card for 1–3 Oct; today's sales and voids change the 30 Sep cards instead MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/money-history`

Re-test (V5): New First found in this V5 audit.

Description: On 3 Oct 2026 Money history → Daily totals shows no card for 1, 2 or 3 October: the newest cards are dated Wed, 30 Sep, although Money Command counts 10 orders today. The demo registers were opened on 29–30 Sep and are still open, and Daily totals seems to file a whole shift under the day it was opened. So today's activity silently changes the 30 Sep BGC card: its "Cash sales" went from ₱13,628 (11:52 AM) to ₱13,768 three minutes later after today's ₱140 cash sale 1003-013, then to ₱13,733.00 after a ₱35 void at 12:00 PM. An owner closing the books by day sees a past day keep changing and cannot find today's totals.

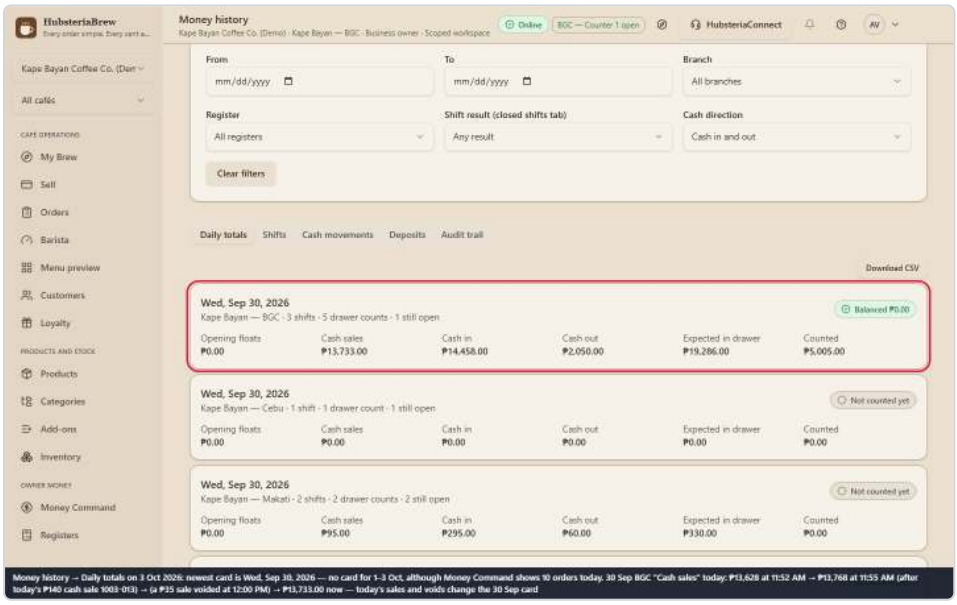

Steps to reproduce:

1. Money history → Daily totals (no filters).
2. Read the date of the newest card.
3. Sell one cash item (here: our test sale 1003-013, ₱140) and reload Daily totals.
4. Compare the 30 Sep BGC "Cash sales" before and after.

Expected: Each café day (Asia/Manila) gets its own card, including today; sales, refunds and voids land on the day they happened, and closed days do not change.

Actual: Newest cards: Wed, Sep 30, 2026, Tue, Sep 29, 2026, Sun, Sep 20, 2026; no card dated after 30 Sep. BGC 30 Sep "Cash sales": ₱13,628.00 (probe at 11:52:31 AM) → ₱13,768.00 (11:55 AM, after 1003-013 at 11:52:33 AM) → ₱13,733.00 (12:29 PM, after the 12:00 PM void of a ₱35 sale). Money Command → Today: 10 orders, money received ₱4,485.50.

Suggested fix: Group Daily totals by the café business day of each sale / cash movement (Asia/Manila, with the business-day cutoff), not by the opening day of the shift; show multi-day shifts on every day they cover and warn about shifts left open across days.

FUN-81: V5, 3 Oct 2026

FUN-82 · My Brew's "Sales by hour" drops sales made before 6 AM, so "Busiest hour" is wrong MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): New First found in this V5 audit.

Description: The redesigned My Brew chart "Sales by hour" only has columns from 6a to 10p. Today's sales between 2 AM and 5 AM (orders 1003-001 to 1003-006, ₱3,435 of the day's ₱3,775.50 net sales) do not appear anywhere on it, and the card's headline reads "Busiest hour: 11a, ₱245". Money Command's Busy hours tab, for the same day, lists 2am "3 · ₱545.00" and 4am "3 · ₱3,190.00" as the biggest hours. Recent orders on the same page show tickets at 4:40 and 4:50 AM. Cafés with early or late shifts get a wrong busiest hour. Related: FUN-41 (day boundaries in Money Command).

Steps to reproduce:

1. Open My Brew (Today); read "Busiest hour" and the hour columns.
2. Scroll to Recent orders (tickets at 4:40–4:50 AM).
3. Click Money Command → Busy hours.

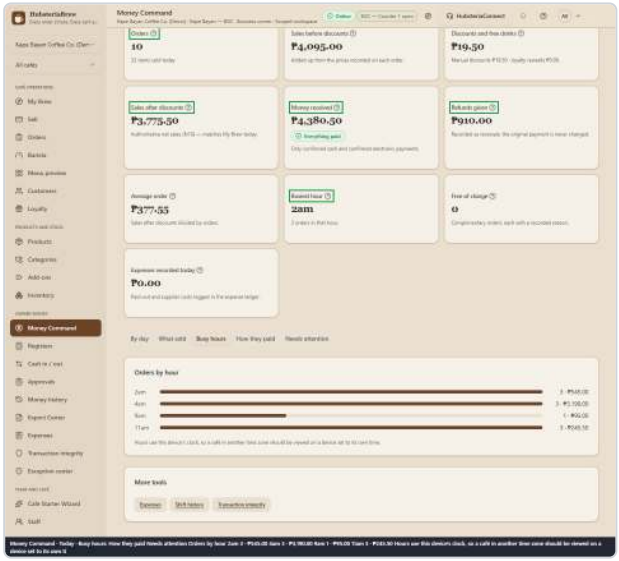

Expected: The hourly chart covers every hour with sales (or the café's opening hours), and "Busiest hour" uses all of today's sales.

Actual: My Brew 2026-10-03T03:52:53.713Z: "Busiest hour: 11a, ₱245"; hour axis ["6a","10p"]; Recent orders ["Ticket 6 | 4:50 AM | ₱1,335.00 | Cash","Ticket 5 | 4:40 AM | ₱1,030.00 | Cash"]. Money Command Busy hours: "2am 3 · ₱545.00 4am 3 · ₱3,190.00 9am 1 · ₱95.00 11am 3 · ₱245.50"; Busiest hour card "2am | 3 orders in that hour.".

Suggested fix: Build the hour axis from the hours that have sales (or the café's trading hours) and compute "Busiest hour" from all of today's settled sales.

FUN-82 (1 of 2) · V5, 3 Oct 2026

FUN-82 (2 of 2) · V5, 3 Oct 2026

FUN-83 · The new full-screen Sell, Checkout and Customers pages no longer show which organisation you are in (no "Demo" label) MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): New First found in this V5 audit.

Description: Sell is now a full-screen register with no sidebar (Orders, Barista and Customers use the same layout). The organisation switcher, the "(Demo)" label and the "All information and transactions are simulated" banner shown on workspace pages are gone. The Sell header reads only "Kape Bayan — BGC · BGC — Counter 1 · Online", and Checkout shows only "Kape Bayan — BGC — BGC — Counter 1 open". This account belongs to two organisations (the pilot "HubsteriaBrew" and the demo café), so a cashier at the till, or staff adding a customer, cannot see whether a sale goes into the real pilot books or the simulated demo (the testing guide says to stop on "data that looks like another business").

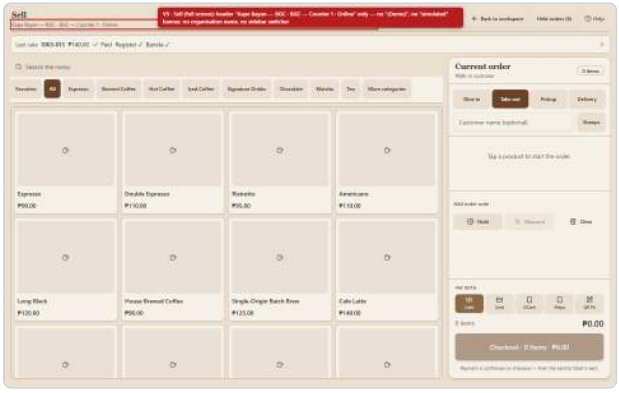

Steps to reproduce:

1. On My Brew, note "Kape Bayan Coffee Co. (Demo)" in the switcher and the "simulated" banner.
2. Tap Open Sell.
3. Read the Sell header; add an item and open Checkout.

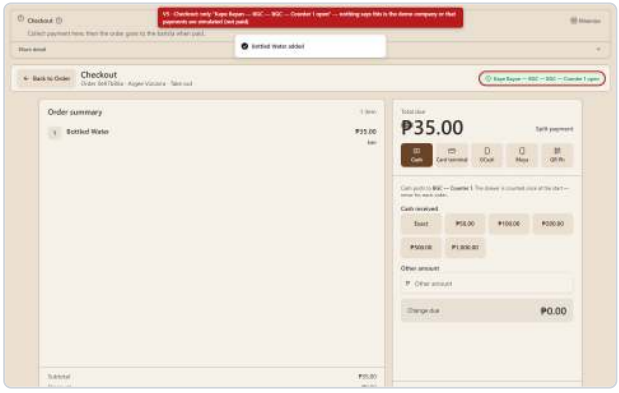

Expected: Sell and Checkout show the organisation name, and in the demo a clear "Demo — simulated" badge, so the cashier always knows which books a sale goes into.

Actual: My Brew: "(Demo)" true, simulated banner true. Sell: header "Kape Bayan — BGC · BGC — Counter 1 · Online", "(Demo)" false, "simulated" false, word "demo" anywhere false, sidebar false. Checkout: "Kape Bayan — BGC — BGC — Counter 1 open", "(Demo)" false, "simulated" false.

Suggested fix: Add the organisation name to the Sell and Checkout headers, and keep a compact "Demo · simulated" badge on both when the organisation is a demo.

FUN-83 (1 of 2) · V5, 3 Oct 2026

FUN-83 (2 of 2) · V5, 3 Oct 2026

FUN-21 · "Back to why HubsteriaBrew" still opens My Brew for logged-in users

LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/pricing`

Re-test (V5): Partially fixed Unchanged since V4: logged out, "Back to why HubsteriaBrew" scrolls to the "why" section; logged in, the same link still lands on My Brew.

Description: The link on public sub-pages (Pricing, Offline POS, product pages) works for visitors: it opens the homepage scrolled to "Why HubsteriaBrew is different". For a logged-in owner, who often browses the public pages from the app, the same link opens the My Brew dashboard instead, so it still does not do what it says for them.

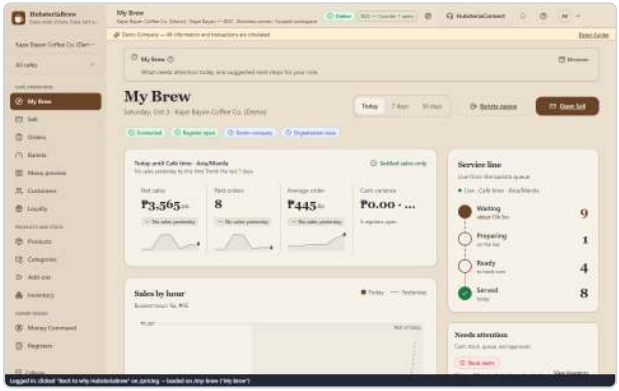

Steps to reproduce:

1. Logged out: open /pricing, click "Back to why HubsteriaBrew".
2. Logged in: repeat.

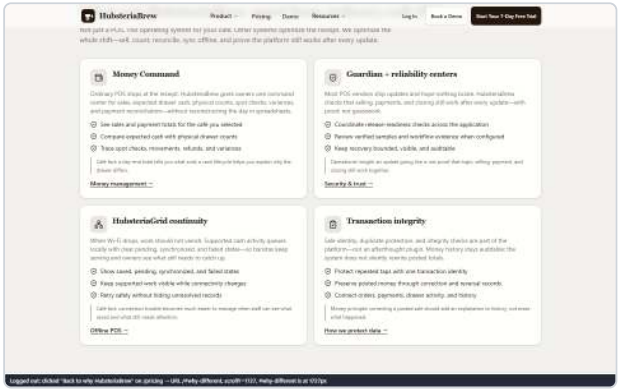

Expected: Both open the "why" section of the homepage.

Actual: Logged out: /#why-different, scrollY 1727, section at 1727px. Logged in: /my-brew ("My Brew").

Suggested fix: Let the homepage anchor load for logged-in users too (or point the link to a "why" page that is not redirected).

FUN-21 (1 of 2) · V5, 3 Oct 2026

FUN-21 (2 of 2) · V5, 3 Oct 2026

FUN-23 · Help & Learning promises "support links" but offers no way to contact support LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/help`

Re-test (V5): Partially fixed Unchanged since V4: Help & Learning still promises "support links", but none of its 14 links is a support contact. (The header's "HubsteriaConnect — talk to support" button exists, but the help page does not point to it.)

Description: The page header reads "How-to articles and support links for HubsteriaBrew", yet none of its 14 links is a support contact (no email, phone, chat, HubsteriaConnect or contact page). The only support entry is the "HubsteriaConnect" button in the top bar, which the help page never mentions. Two cards also point to modules the pilot hides ("Open Money", "Open Demo Center"; see FUN-74).

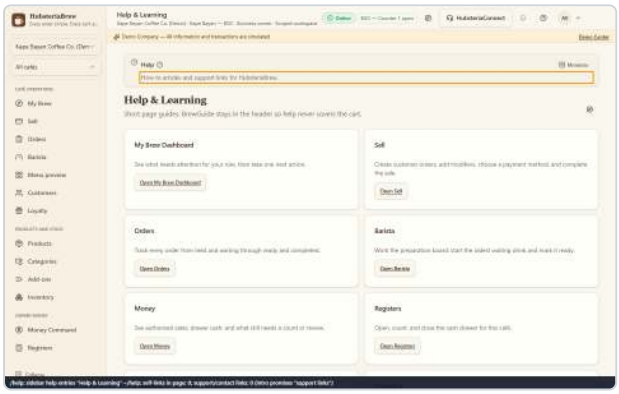

Steps to reproduce:

1. Open Help & Learning from the sidebar.
2. Look for any way to contact support on the page.

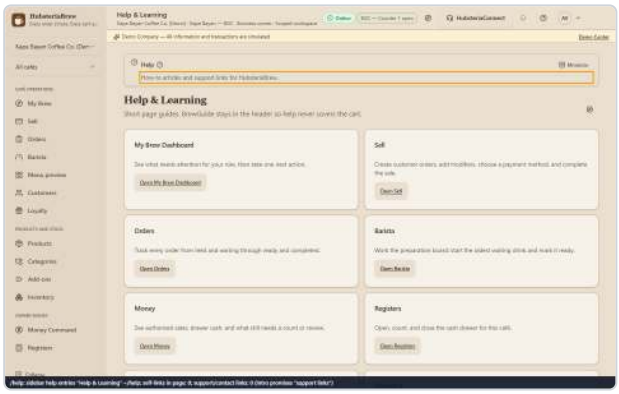

Expected: A visible support contact on the page (e.g. HubsteriaConnect, email or /contact), or drop "support links" from the header.

Actual: Header text "How-to articles and support links for HubsteriaBrew."; page links 14, support/contact links 0; top bar: ["HubsteriaConnect — talk to support"].

Suggested fix: Add a "Contact support" card linking to HubsteriaConnect (or email), or reword the header.

FUN-23 (1 of 2) · V4

FUN-23 (2 of 2) · V5, 3 Oct 2026

FUN-25 · Notifications bell is a disabled placeholder whose explanation can never be seen LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): Still open Unchanged since V4: the bell is still disabled with pointer-events: none, so its hint ("Notifications are not available yet...") can never show; hover and click do nothing.

Description: The bell in the top bar is greyed out (opacity 50 %) and ignores the mouse (pointer-events: none). A helpful explanation exists in its title attribute, but because the button ignores the pointer, the tooltip never appears. Owners see a control that silently does nothing.

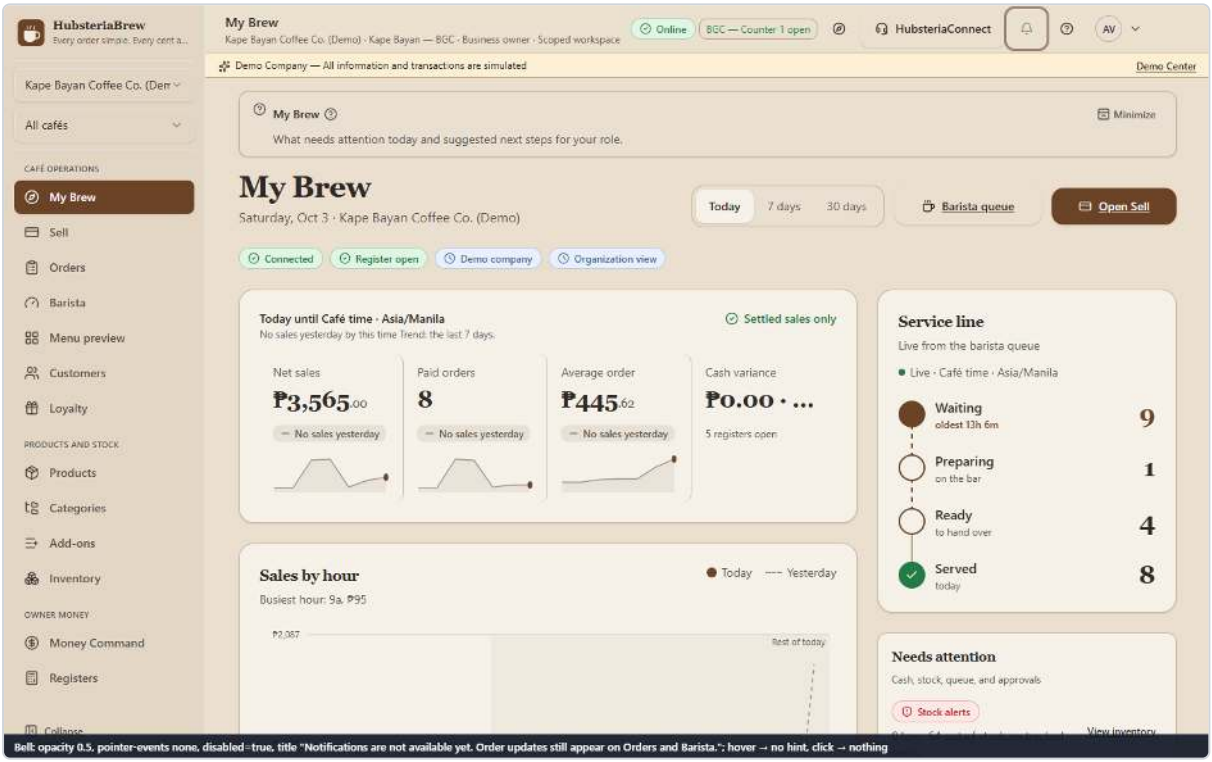

Steps to reproduce:

1. Open My Brew.
2. Hover the bell for 2 s, then click it.

Expected: No bell until notifications exist, or a visible "coming soon" hint.

Actual: opacity 0.5, pointer-events none, disabled true, title "Notifications are not available yet. Order updates still appear on Orders and Barista.", aria-label "Notifications — coming in a later release"; hover: nothing, click: nothing.

Suggested fix: Hide the bell, or keep it hoverable/focusable (aria-disabled instead of pointer-events: none) so the hint shows.

FUN-25: V5, 3 Oct 2026

FUN-28 · Order slip and Cash in / out still show the payment time in the device's time zone (detail page is fixed) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/receipt/8dafbeb4-fc9e-4503-832b-a90c7ae22dda`

Re-test (V5): Partially fixed Better: on a device set to Los Angeles, the order detail header, order history and Orders list for 1003-011 now show café time ("Oct 3, 2026, 11:47 AM"). But the "Money history" line on the order slip and the Cash in / out list still use the device clock: "10/2/2026, 8:47:04 PM", a different day.

Description: Order 1003-011 was paid at 11:47 AM Manila time on 3 Oct. With the device time zone set to America/Los_Angeles, the order detail, its history and the Orders list now all say "Oct 3, 2026, 11:47 AM", and the slip header does too. The payment line under "Money history" on the same slip says "10/2/2026, 8:47:04 PM · Ref 1003-011", and Cash in / out lists "Cash sale for order 1003-011 | 10/2/2026, 8:47:04 PM". One page shows two different dates for the same payment.

Steps to reproduce:

1. Set the device time zone to America/Los_Angeles.
2. Open /orders/8dafbeb4-fc9e-4503-832b-a90c7ae22dda and /receipt/8dafbeb4-fc9e-4503-832b-a90c7ae22dda.
3. Open Cash in / out.

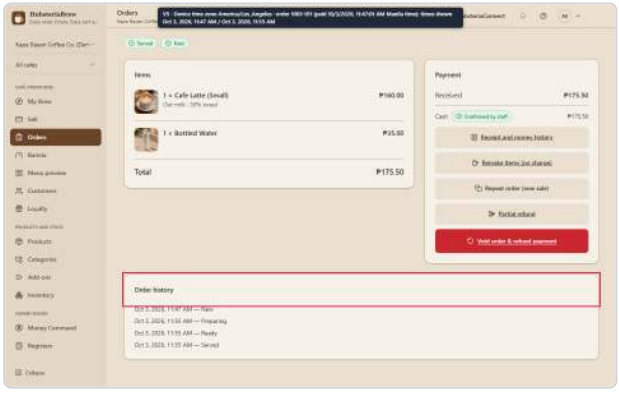

Expected: Times are shown in the café's time zone (Asia/Manila), optionally labelled PHT.

Actual: Los Angeles device: detail Oct 3, 2026, 11:47 AM / Oct 3, 2026, 11:55 AM; slip Oct 3, 2026, 11:47 AM / 10/2/2026, 8:47:04 PM; Cash in / out "Cash sale for order 1003-011 | 10/2/2026, 8:47:04 PM · `<cashier>` ". Manila device: slip Oct 3, 2026, 11:47 AM / 10/3/2026, 11:47:04 AM.

Suggested fix: Format the payment lines on the slip, Cash in / out and Money history with the café time zone (Asia/Manila), as the slip header and order detail now do.

FUN-28 (1 of 2) · V5, 3 Oct 2026

FUN-28 (2 of 2) · V5, 3 Oct 2026

FUN-30 · Registers give no warning for a shift open for three days, so today's sales are filed under 30 September LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/registers`

Re-test (V5): Partially fixed Ticket ages stay readable, but the register half is unchanged and now matters more: BGC — Counter 1 has been open since 30 Sep 12:36 PM (three days) with no warning, our 3 Oct sales posted into it, and Money history files them under "Wed, Sep 30, 2026" (there is no row for 1–3 Oct). Raised to Medium.

Description: On 3 October all five registers are still open from 29–30 September (BGC — Counter 1 since 9/30/2026, 12:36:34 PM). Registers shows no warning or "close the previous day first" prompt, and Sell accepts sales into that shift. Because sales follow the shift, Money history → Daily totals has no row for 1, 2 or 3 October: today's BGC sales, including our 1003-011, 1003-013 and the refund of 1003-012, are added to the "Wed, Sep 30, 2026" row. My Brew's Registers card says only "open since 12:36 PM", without the date. Barista ticket ages are fine ("42 min", "13h 18m").

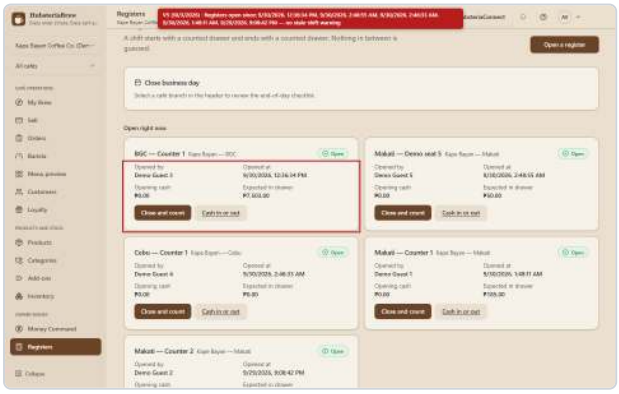

Steps to reproduce:

1. Open Registers and read "Open right now".
2. Make a cash sale on Sell.
3. Open Money history → Daily totals and find today's BGC row.

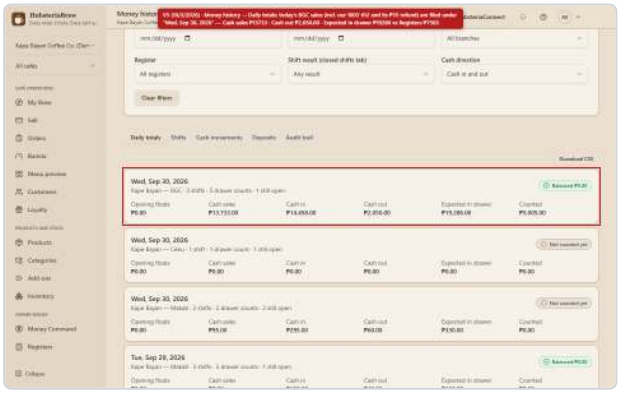

Expected: Human-readable durations and a warning for tickets or shifts older than a business day. Sales made on a new day are reported under that day.

Actual: Registers opened at: 9/30/2026, 12:36:34 PM, 9/30/2026, 2:48:55 AM, 9/30/2026, 2:46:33 AM, 9/30/2026, 1:48:11 AM, 9/29/2026, 9:08:42 PM; warning shown: false. Money history first BGC row "Wed, Sep 30, 2026": Kape Bayan — BGC · 3 shifts · 5 drawer counts · 1 still open | Balanced ₱0.00 | Opening floats | ₱0.00 | Cash sales | ₱13,733.00 | Cash in | ₱14,458.00 | Cash out | ₱2,050.00 | Expected in drawer | ₱19,286.00 | Counted | ₱5,005.00. My Brew: "Registers | 5 open | BGC — Counter 1 | open since 12:36 PM ".

Suggested fix: Flag any shift that spans a business-day boundary (and prompt to close it before new sales post into it). Until a shift is closed, show a banner on Sell and Registers ("BGC — Counter 1 has been open since 30 Sep — close and count it"), and report sales by the business day they happened.

FUN-30 (1 of 2) · V5, 3 Oct 2026

FUN-30 (2 of 2) · V5, 3 Oct 2026

FUN-34 · Loyalty rule still describes the reward two different ways ("Free Cafe Latte" vs "a free drink up to PHP 180") LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/loyalty`

Re-test (V5): Partially fixed Unchanged since V4: the running rule still describes the reward twice, differently ("Free Cafe Latte after 10 qualifying visits" and "a free drink worth up to PHP 180"). The visit-counting text stays consistent.

Description: The running rule "Free drink after 10 visits" says both "Free Cafe Latte after 10 qualifying visits — the reward is given on the next visit" and "Every tenth qualifying visit earns a free drink worth up to PHP 180". Staff cannot tell whether the customer gets a Cafe Latte or any drink up to ₱180.

Steps to reproduce:

1. Open Loyalty.
2. Read the "Free drink after 10 visits" card.

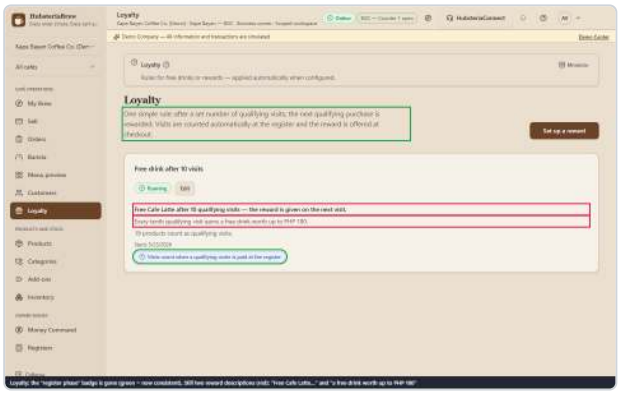

Expected: One reward description.

Actual: Reward A: "Free Cafe Latte after 10 qualifying visits — the reward is given on the next visit."; reward B: "Every tenth qualifying visit earns a free drink worth up to PHP 180."; note: "Visits count when a qualifying order is paid at the register".

Suggested fix: Generate one sentence from the rule (e.g. "Free drink up to ₱180, such as a Cafe Latte, on the visit after the 10th").

FUN-34 (1 of 2) · V4

FUN-34 (2 of 2) · V5, 3 Oct 2026

FUN-36 · New products are inserted in the middle of the menu, regardless of their category LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): Still open A new Snacks product still lands inside another category's block: "QA-TEST V5 Snack" appears after "Bottled Cold Brew" and before "Canned Soda" (both Bottled Drinks) in Products and in Sell → All, instead of after the other Snacks.

Description: After adding "QA-TEST V5 Snack" (category Snacks), Products (All categories) lists it between "Bottled Cold Brew" and "Canned Soda", both Bottled Drinks, while the last Snacks item "Banana Chips" sits three places earlier. Sell → All shows the same order. There is still no way to order products within a category.

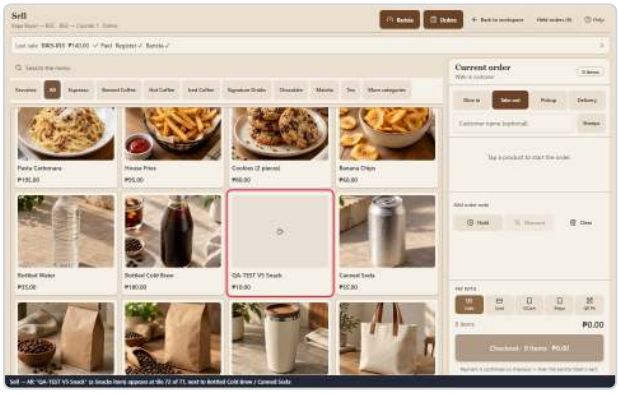

Steps to reproduce:

1. Add a product "QA-TEST V5 Snack" in Snacks.
2. Open Products (All categories) and Sell → All.

Expected: New products appear at the end of their category (or in an order the owner can set).

Actual: Products: Banana Chips — Snacks · KB-BANANACHIPS — ₱60.00 → Bottled Water — Bottled Drinks · KB-BOTTLEDWATER — ₱35.00 → Bottled Cold Brew — Bottled Drinks · KB-BOTTLEDCOLDBREW — ₱180.00 → QA-TEST V5 Snack — Snacks — ₱10.00 → Canned Soda — Bottled Drinks · KB-CANNEDSODA — ₱55.00 → Kape Bayan Beans 250g — Merchandise · KB-BEANS250G — ₱450.00 → Kape Bayan Beans 1kg — Merchandise · KB-BEANS1KG — ₱1,600.00. Sell → All: Banana Chips ₱60.00 → Bottled Water ₱35.00 → Bottled Cold Brew ₱180.00 → QA-TEST V5 Snack ₱10.00 → Canned Soda ₱55.00 → Kape Bayan Beans 250g ₱450.00 → Kape Bayan Beans 1kg ₱1,600.00.

Suggested fix: Assign sort_order = max(sort_order in category) + 1 on create, sort All by category order then product order, and add up/down (like categories) for products.

FUN-36 (1 of 2) · V5, 3 Oct 2026

FUN-36 (2 of 2) · V5, 3 Oct 2026

FUN-44 · Audit trail still shows internal field names, IDs and "Role not recorded"; category edits omit the name LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/money-history`

Re-test (V5): Partially fixed Unchanged since V4: product entries read well ("Product price changed: QA-TEST V5 Snack — Base Price Minor: ₱13.00 → ₱14.00", with person and role), but hiding a category still shows only "Category updated — Is Active: true → false", reorders show "Neighbor Id: `<uuid>`", category creation shows "Updated By: `<uuid>`", and sales still read "Role not recorded".

Description: After today's QA-TEST V5 changes, Money history → Audit trail names the person and the item for product edits. Still hard to read: hiding QA-TEST V5 Category shows only "Category updated — Is Active: true → false" (no category name); the moves show "Category Reordered — Direction: up · Neighbor Id: da440455-..." with "Role not recorded"; category creation shows "Updated By: d502ffb9-..."; attaching a choice group shows only "Product updated: QA-TEST V5 Snack — Name: QA-TEST V5 Snack" (not what changed); payments show "State: manually_confirmed · Amount Minor · Order Number: null · Role not recorded".

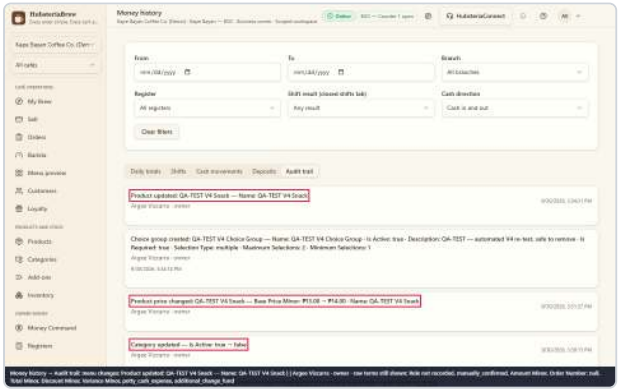

Steps to reproduce:

1. Change a product price, hide a category and move a category (QA-TEST V5 items).
2. Money history → Audit trail.
3. Read the newest entries and a sale entry.

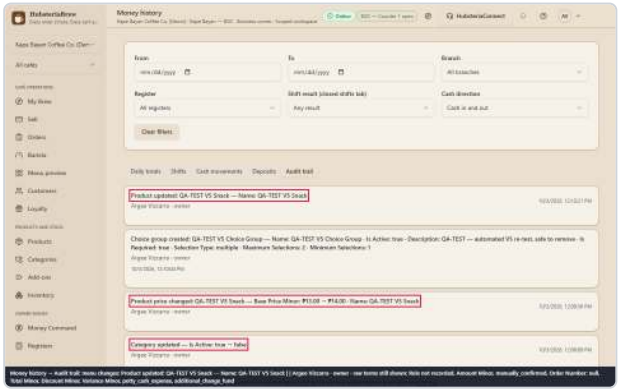

Expected: Each entry names the person, the item (e.g. "QA-TEST V3 Snack") and the change (₱13.00 → ₱14.00), in plain words.

Actual: Raw terms still shown: Role not recorded, Amount Minor, manually_confirmed, Order Number: null, Total Minor, Discount Minor, Variance Minor, petty_cash_expense, additional_change_fund. Entries: Product updated: QA-TEST V5 Snack — Name: QA-TEST V5 Snack || Category updated — Is Active: true → false || Category Reordered — Direction: down · Neighbor Id: da440455-3cc3-4dd9-9432-b1cb1e2f6141 || Category Reordered — Direction: up · Neighbor Id: da440455-3cc3-4dd9-9432-b1cb1e2f6141

Suggested fix: Add the entity name to every entry (category, choice group, register), translate field names ("Base Price Minor" → "Price", "Is Active" → "On the menu"), resolve IDs to names, drop "Order Number: null", and record the role for sale events.

FUN-44 (1 of 2) · V4

FUN-44 (2 of 2) · V5, 3 Oct 2026

FUN-46 · Ready to open counts hidden menu sections ("24 section(s)" with 20 on the menu) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/demo`

Re-test (V5): Partially fixed Unchanged since V4: product counts match (Demo centre PRODUCTS 75, Ready to open "75 on-menu item(s)", Products → On the menu 75), but Ready to open still says "24 section(s)" while only 20 categories are on the menu (4 hidden QA-TEST ones are counted).

Description: Settings → Ready to open → "Menu sections" reads "24 section(s)". Categories shows 20 sections on the menu plus 4 hidden QA-TEST categories at the time of reading, so hidden sections are still counted. The product side stays fixed: Demo centre (sidebar) PRODUCTS 75 and Ready to open "75 on-menu item(s)" both equal Products → On the menu (75; 14 archived not counted). The Demo centre counters showed "—" for the first 5 seconds before loading.

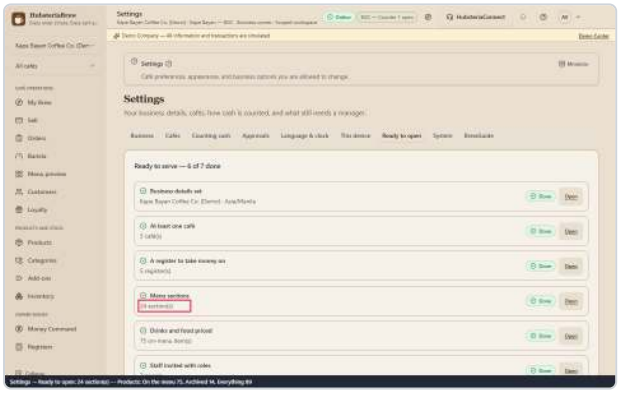

Steps to reproduce:

1. Sidebar → Demo centre; read PRODUCTS.
2. Products: count "On the menu", "Archived", "Everything".
3. Settings → Ready to open (view only); compare with Categories.

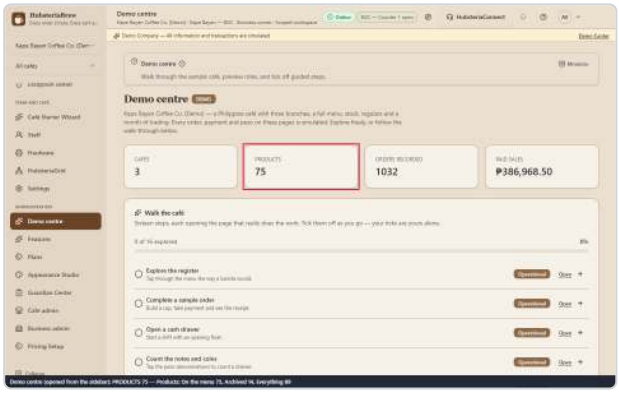

Expected: Counts exclude archived products and hidden sections (or say "including archived").

Actual: Demo centre PRODUCTS 75; Products On the menu 75, Archived 14, Everything 89; Ready to open: 24 section(s), "75 on-menu item(s)"; Categories: 20 on the menu + 4 hidden.

Suggested fix: Count only visible (on-the-menu) categories in "Menu sections", or say "20 on the menu, 4 hidden".

FUN-46 (1 of 2) · V5, 3 Oct 2026

FUN-46 (2 of 2) · V5, 3 Oct 2026

FUN-48 · Features and Plans still promise "Compare cafés" / "branch comparison", which does not exist LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/features`

Re-test (V5): Partially fixed Unchanged since V4: Features ("Several cafés … Compare cafés") and Plans ("Advanced reports … branch comparison") still promise a comparison that Money Command does not have; the Demo centre step still says "Business admin" but opens Café admin.

Description: The Demo centre's "Compare the three cafés" step describes switching cafés one at a time and opens Café admin (All cafés / BGC / Cebu / Makati buttons). Two sales promises remain: the Features card "Several cafés — Available now — Compare cafés, share the menu…" and the Plans line "Advanced reports — Exports, owner morning brief and branch comparison". Money Command still has one café picker and no comparison tab. Minor: the step says "Business admin" but opens Café admin.

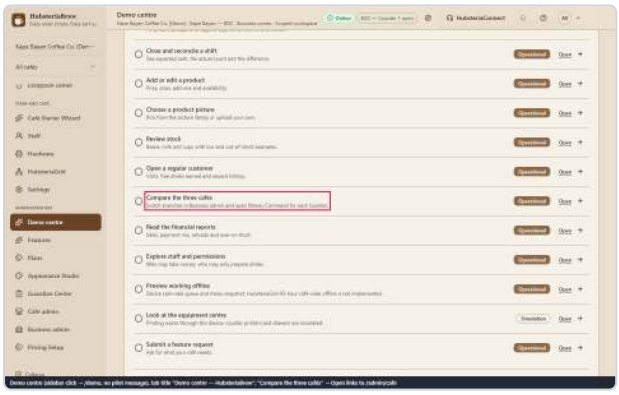

Steps to reproduce:

1. Click Demo centre → "Compare the three cafés" → Open.
2. Click Features; read "Several cafés".
3. Click Plans; read "Advanced reports". Click Money Command; look through all tabs.

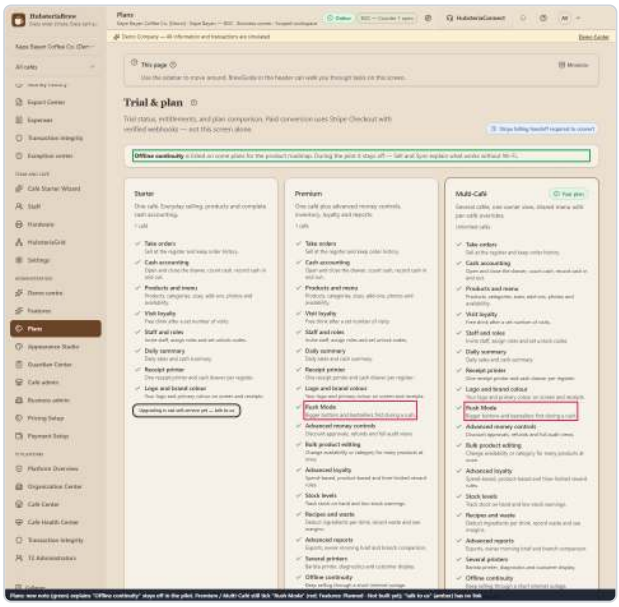

Expected: No feature is promised that does not exist.

Actual: Step: "Compare the three cafés | Switch branches in Business admin and open Money Command for each location. | Operat" → /admin/cafe. Features: "Compare cafés, share the menu and allow local overrides.". Plans: "Advanced reports | Exports, owner morning brief and branch comparison.". Money Command tabs ["Shop right now","Drawer & register","Money trail","By day","What sold","Busy hours","How they paid","Needs attention"], compare wording: [].

Suggested fix: Mark "Compare cafés" / "branch comparison" as planned, or add a per-café comparison view; say "Café admin" in the step.

FUN-48 (1 of 2) · V5, 3 Oct 2026

FUN-48 (2 of 2) · V5, 3 Oct 2026

FUN-57 · Plans still sells Rush Mode, which Features says is not built, and "talk to us" has no link LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/plans`

Re-test (V5): Partially fixed Better: a new note on Plans says "Offline continuity is listed … for the product roadmap. During the pilot it stays off". Still open: Premium and Multi-Café tick Rush Mode (Features: "Planned · Not built yet"), and "talk to us" still has no link.

Description: Plans now explains that "Offline continuity" stays off during the pilot. Two problems remain. Premium and Multi-Café ("Your plan") both tick "Rush Mode — Bigger buttons and bestsellers first during a rush", while Features says "Rush Mode · Planned · Not built yet". The two "Upgrading is not self-service yet — talk to us" pills are plain text with no contact link.

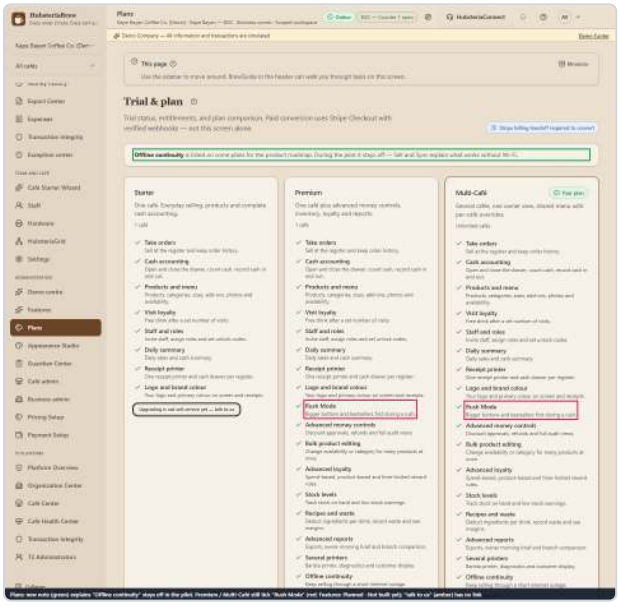

Steps to reproduce:

1. Click Plans in the sidebar.
2. Read the note at the top and the Premium / Multi-Café lists.
3. Compare with Features → Rush Mode; try "talk to us".

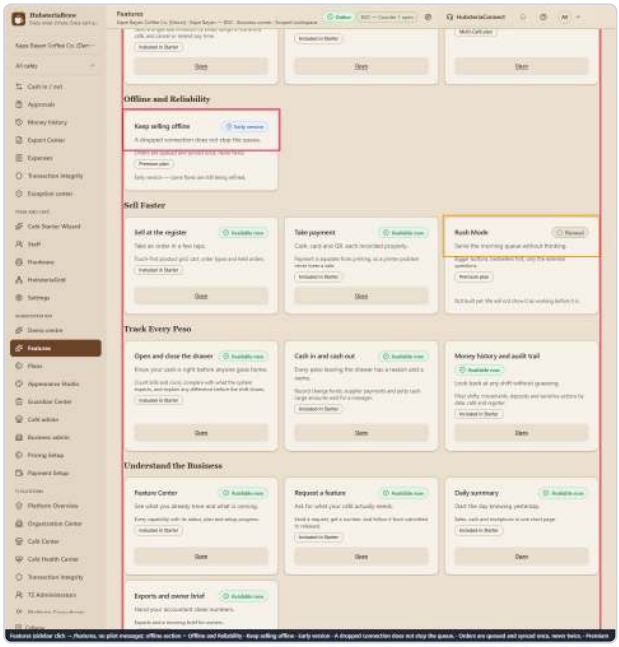

Expected: Plans list only live features (or mark "Coming soon"); "talk to us" links to contact.

Actual: Note: "Offline continuity is listed on some plans for the product roadmap. During the pilot it stays off — Sell and Sync explain what works without Wi-Fi."; Rush Mode rows: 2; "talk to us" ×2, linked: 0.

Suggested fix: Mark Rush Mode "Coming soon" (like the offline note); link "talk to us" to HubsteriaConnect or /contact.

FUN-57 (1 of 2) · V5, 3 Oct 2026

FUN-57 (2 of 2) · V5, 3 Oct 2026

FUN-62 · Café admin says terminal names and order are "managed here" but has no controls for them LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/admin/cafe`

Re-test (V5): Partially fixed Unchanged since V4: Café admin still says "Terminal names and display order are managed here" but offers only five read-only "Enabled" chips; Payment Setup still sends owners there.

Description: Payment Setup sends owners to Café admin for terminal names and payment-button order ("Café-level terminals and payment button order: Café admin and Hardware centre"). Café admin's "Hardware & payments (this café)" card says "Terminal names and display order are managed here", but it only shows five read-only "Enabled" chips (Cash, Card terminal, GCash, Maya, QR Ph): no names, no ordering, no edit button.

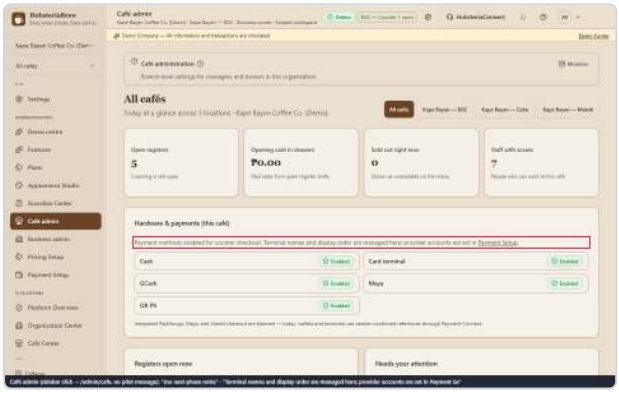

Steps to reproduce:

1. Click Café admin; read "Hardware & payments (this café)".
2. Click Payment Setup; read the last line.

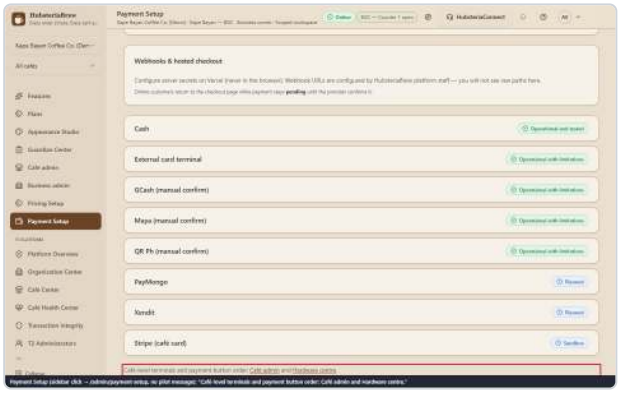

Expected: The page that claims the setting offers it, or the text says it is coming.

Actual: Café admin: "Terminal names and display order are managed here; provider accounts are set in Payment Setup." (chips only). Payment Setup: "Café-level terminals and payment button order: Café admin and Hardware centre.".

Suggested fix: Add terminal name/order controls to Café admin (or Hardware), or change both texts to "coming soon".

FUN-62 (1 of 2) · V5, 3 Oct 2026

FUN-62 (2 of 2) · V5, 3 Oct 2026

FUN-66 · "Takeout cup and bag" (+₱5) is no longer pre-ticked, but still cannot be removed once tapped, even on Dine in LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): Partially fixed (V4: Critical) The overcharge is gone: the ₱5 packaging is no longer pre-ticked. Dine in Bottled Water is ₱35.00 on the tile, sheet, cart and checkout, and our sales 1003-011 (Dine in), 1003-012 and 1003-013 (Take out, Cafe Latte with options) were charged no packaging. What remains: the packaging choice is a single radio button, so after one tap it cannot be unticked.

Description: The "Takeout packaging" group (+₱5.00) is now unticked by default, so the menu price is what the customer pays. But it is shown as a one-option radio button: if the cashier taps "Takeout cup and bag" by mistake, tapping it again (or pressing Space) does not remove it, and "Add to order" stays at ₱40.00 for a ₱35.00 Bottled Water. The only way out is "Back" and starting the item again. The choice is also offered on Dine in orders. Optional add-ons like Vanilla and Extra espresso shot toggle on and off correctly.

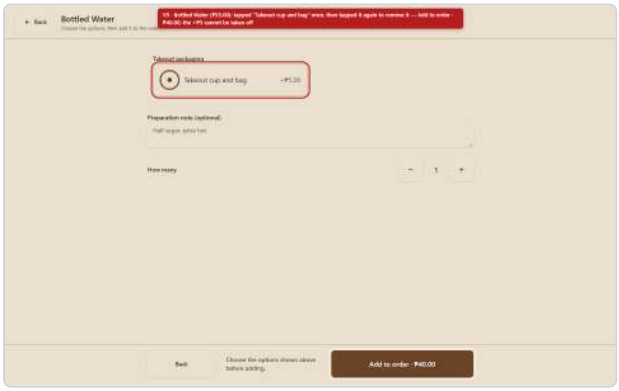

Steps to reproduce:

1. Open Sell, choose Dine in and tap Bottled Water (₱35.00).
2. Tap "Takeout cup and bag" (+₱5.00).
3. Tap it again to remove it and read "Add to order".

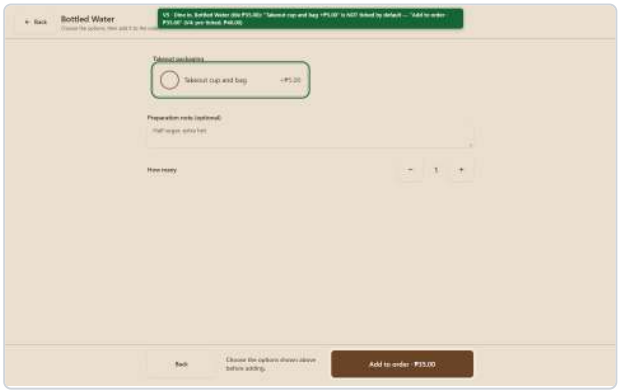

Expected: A second tap removes the packaging (a checkbox, or a "No packaging" choice), and packaging is offered only for take-away order types.

Actual: Bottled Water/Takeout cup and bag start: Add to order · ₱35.00 · aria-checked=false; Bottled Water/Takeout cup and bag tap 1 (label): Add to order · ₱40.00 · aria-checked=true; Bottled Water/Takeout cup and bag tap 2 (label): Add to order · ₱40.00 · aria-checked=true; Bottled Water/Takeout cup and bag Space: Add to order · ₱40.00 · aria-checked=true. Sales: 1003-011 Dine in ₱175.5 (Small + Oat milk + 50% sweet ₱160 + water ₱35 − 10%); 1003-013 Take out latte ₱140 = tile.

Suggested fix: Render optional single-choice groups so a second tap clears them (or add a "None" choice), and hide take-away packaging on Dine in.

FUN-66 (2 of 2) · V5, 3 Oct 2026

FUN-74 · My Brew and Help still link to pilot-"hidden" Money Command and Demo centre LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): Partially fixed Better: a direct load of /money now bounces to My Brew with the pilot message, and My Brew no longer links to Approvals. Still: My Brew's Net sales card opens Money Command, the demo banner links "Demo Center", and Help's "Open Money" / "Open Demo Center" open the hidden modules when clicked.

Description: The pilot home and help pages still send owners to modules the pilot hides. On My Brew, the Net sales card opens Money Command, and the yellow demo banner links "Demo Center". On Help & Learning, "Open Money" and "Open Demo Center" open those modules when clicked. Improvements since V4: typing or bookmarking /money now bounces to My Brew with the pilot message, and the Approvals link is gone from My Brew.

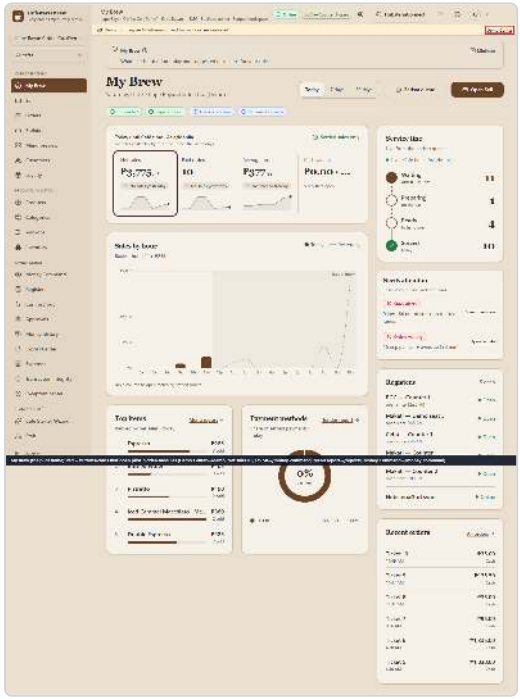

Steps to reproduce:

1. Open My Brew; note the outlined links.
2. Open Help & Learning → click "Open Money", then "Open Demo Center".
3. Type https://hubsteriabrew.com/money in the address bar.

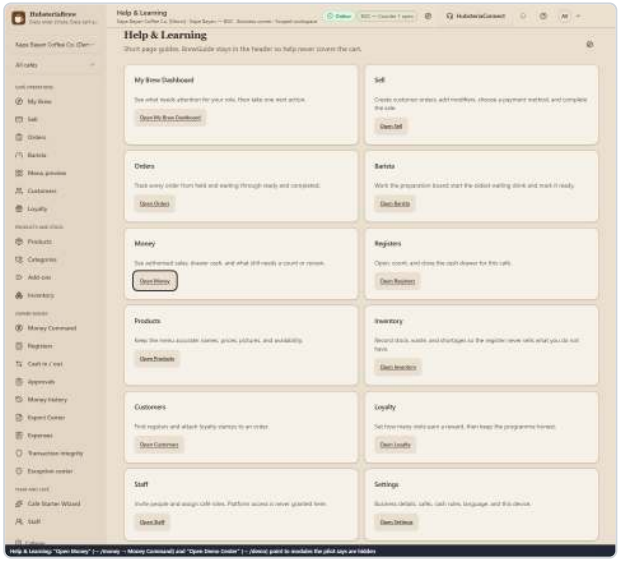

Expected: No in-app link points to a hidden module, and every address of a hidden module is guarded.

Actual: My Brew links: ["Demo Center→/demo","Net sales ₱3,775.50 No→/money-command","Menu report→/reports","Money Command→/money-command"]. Help "Open Money" → /money-command (toast: none); "Open Demo Center" → /demo; direct /money → /my-brew (toast: yes).

Suggested fix: When the pilot flag is on, point these cards to allowed pages (Money history, Registers) or hide them; apply the same guard to client-side navigation.

FUN-74 (1 of 2) · V5, 3 Oct 2026

FUN-74 (2 of 2) · V5, 3 Oct 2026

FUN-75 · Automated test entries "[sim:...] cash-in test / cash-out test" sit in the demo café's cash ledger LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/cash-movements`

Re-test (V5): Still open Unchanged since V4: Cash in / out in the demo café still lists "[sim:...] cash-in test / cash-out test" movements (2 still in the visible list), each with a live "Reverse" button.

Description: Cash in / out in the shared demo café still shows movements such as "[sim:sim-20260929T214751-l0tb5i] cash-out test" (−₱20, Petty cash expense) and "... cash-in test" (+₱50, Additional change fund), dated 30 Sep early morning, each with a live "Reverse" button. They come from an automated shift simulation run against the public demo, not from a café. Prospects see developer test data, and the entries change the demo drawers' expected cash.

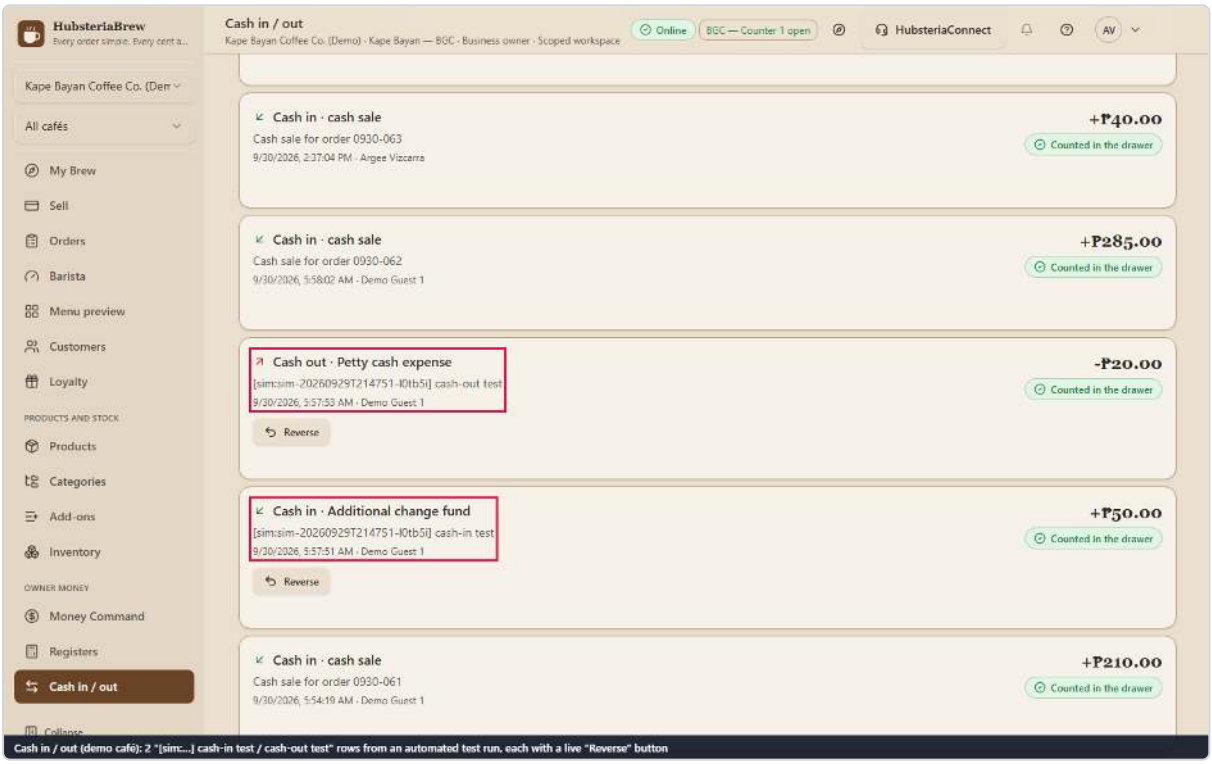

Steps to reproduce:

1. Click Cash in / out.
2. Scroll to the entries of 30 Sep early morning.

Expected: Automated tests run in a separate test tenant; the demo ledger holds only realistic demo entries.

Actual: ["Cash out · Petty cash expense | [sim:sim-20260929T214751-l0tb5i] cash-out test | 9/30/2026, 5:57:53 AM | -₱20.00","Cash in · Additional change fund | [sim:sim-20260929T214751-l0tb5i] cash-in test | 9/30/2026, 5:57:51 AM | +₱50.00"]; Reverse buttons on page: 2.

Suggested fix: Run the shift simulation in a dedicated tenant, or clean up after it.

FUN-75: V5, 3 Oct 2026

FUN-76 · Public Offline POS page shows an internal note: "operators use the repo doc docs/PILOT_TRUTH_SHEET.md" LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/offline-pos`

Re-test (V5): Still open Unchanged since V4: the public /offline-pos "Pilot honesty" box still says "For Loyverse comparison expectations, operators use the repo doc docs/PILOT_TRUTH_SHEET.md."

Description: The public HubsteriaGrid page (/offline-pos) has a "Pilot honesty" box. Next to a reasonable disclaimer it says "For Loyverse comparison expectations, operators use the repo doc docs/PILOT_TRUTH_SHEET.md." A prospective customer sees a competitor name and a file path from the developer's code repository that they cannot open.

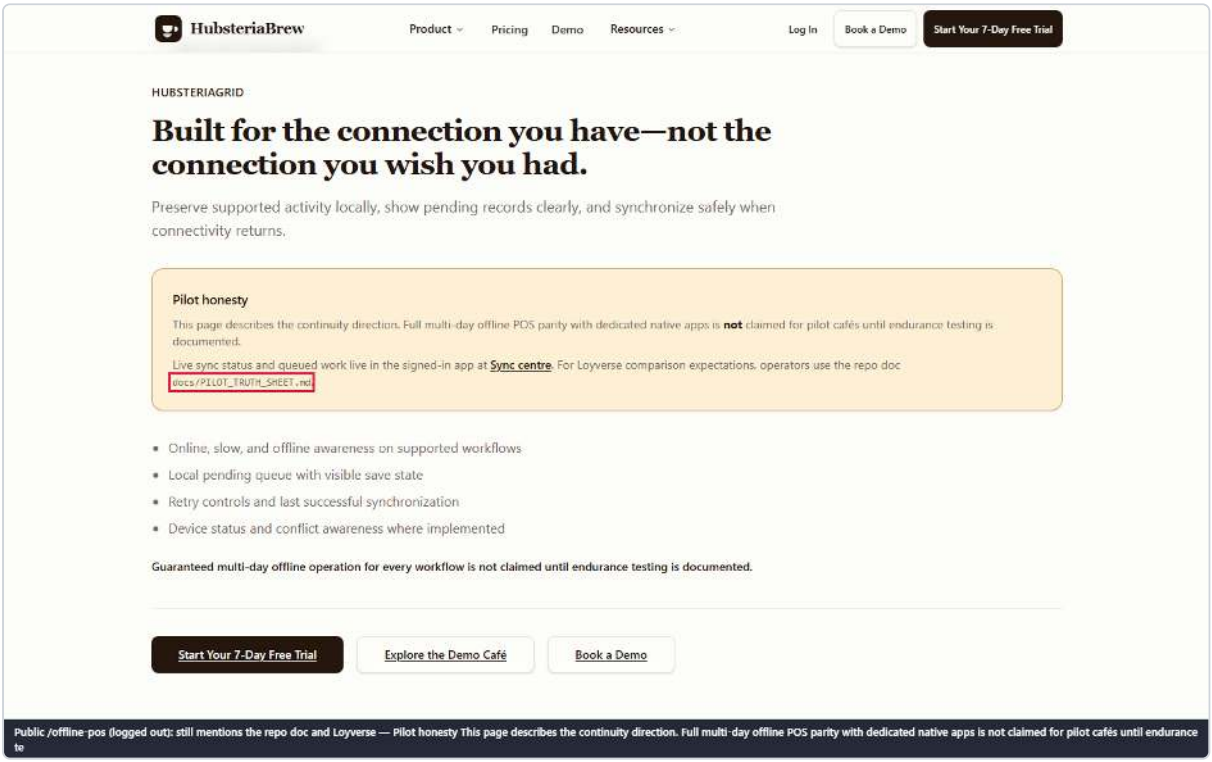

Steps to reproduce:

1. Logged out, open /offline-pos.
2. Read the "Pilot honesty" box.

Expected: Customer-facing wording only; no repository paths or internal comparisons.

Actual: Box: [" Pilot honesty "," Live sync status and queued work live in the signed-in app at Sync centre. For Loyverse comparison expectations, operators use the repo doc docs/PILOT_TRUTH_SHEET.md. "]; repo path: true; Loyverse: true.

Suggested fix: Remove the repo reference and competitor note from the public page.

FUN-76: V5, 3 Oct 2026

FUN-77 · Account menu and organisation switcher list the demo organisation as "Kape Bayan Coffee Co. (Demo) (Demo)" LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): Still open Unchanged since V4: the account menu's "Switch organization" list, and the sidebar organisation switcher's list, show "Kape Bayan Coffee Co. (Demo) (Demo)".

Description: The account belongs to two organisations. In the account menu ("Switch organization") and in the sidebar organisation switcher, the demo café appears as "Kape Bayan Coffee Co. (Demo) (Demo)": the "(Demo)" tag is added to a name that already contains it. Cosmetic, but it is on menus every owner opens.

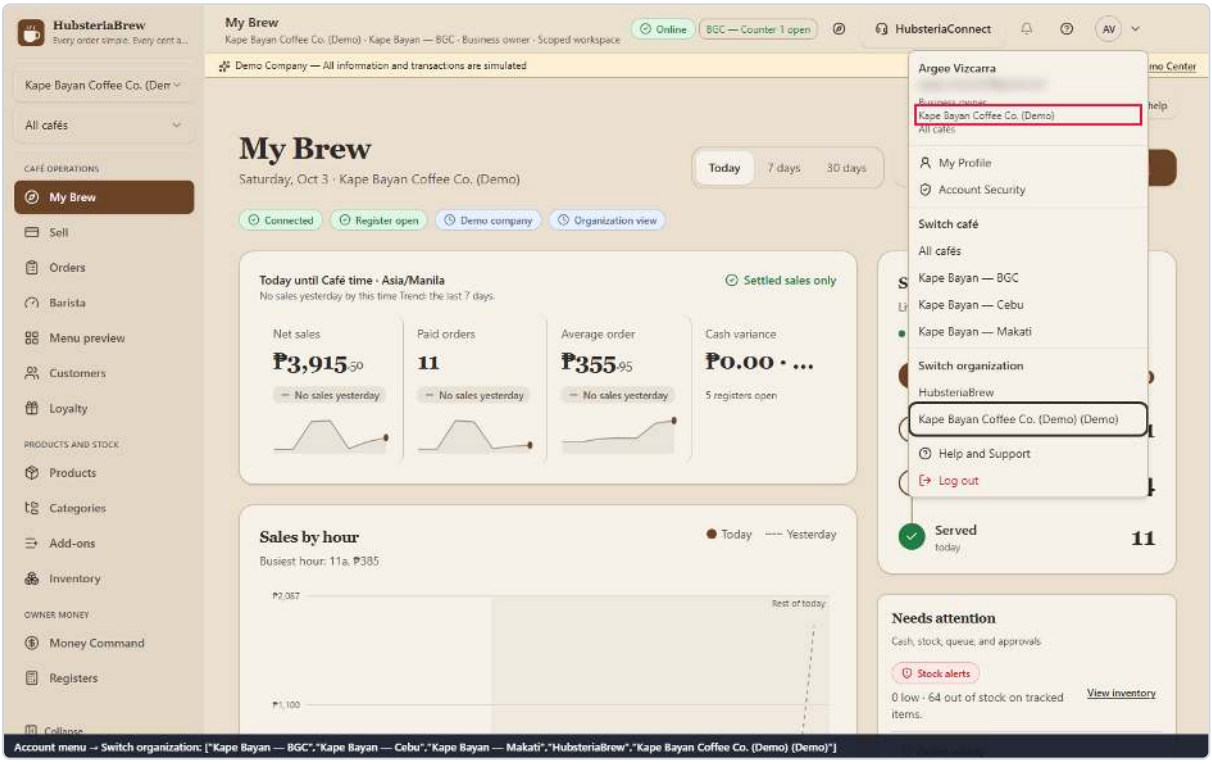

Steps to reproduce:

1. Open the account menu (avatar, top right) and read "Switch organization".
2. Open the organisation switcher at the top of the sidebar.

Expected: "Kape Bayan Coffee Co. (Demo)".

Actual: Account menu: ["HubsteriaBrew","Kape Bayan Coffee Co. (Demo) (Demo)"]; sidebar options: ["HubsteriaBrew","Kape Bayan Coffee Co. (Demo) (Demo)"].

Suggested fix: Only append the demo tag when the name does not already contain it.

FUN-77: V5, 3 Oct 2026

FUN-78 · My Brew labels recent sales "Ticket 10" by position, so after a void the numbers point at the wrong order LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): Still open Unchanged. My Brew "Recent orders" labels sales "Ticket N" by position: our 1003-013 (₱140.00, 11:52 AM) was "Ticket 11" before we voided 1003-012, and "Ticket 10" afterwards — the label the voided order had.

Description: "Recent orders" on My Brew lists "Ticket N · time · amount", where N is a running count of today's paid orders, not the order number. Before our void it read "Ticket 11 · 11:52 AM · ₱140.00, Ticket 10 · 11:49 AM · ₱35.00". After voiding 1003-012 (the ₱35.00 sale), the ₱140.00 sale (1003-013) became "Ticket 10". Orders and the Barista board use 1003-0NN, so staff comparing them will look up the wrong order.

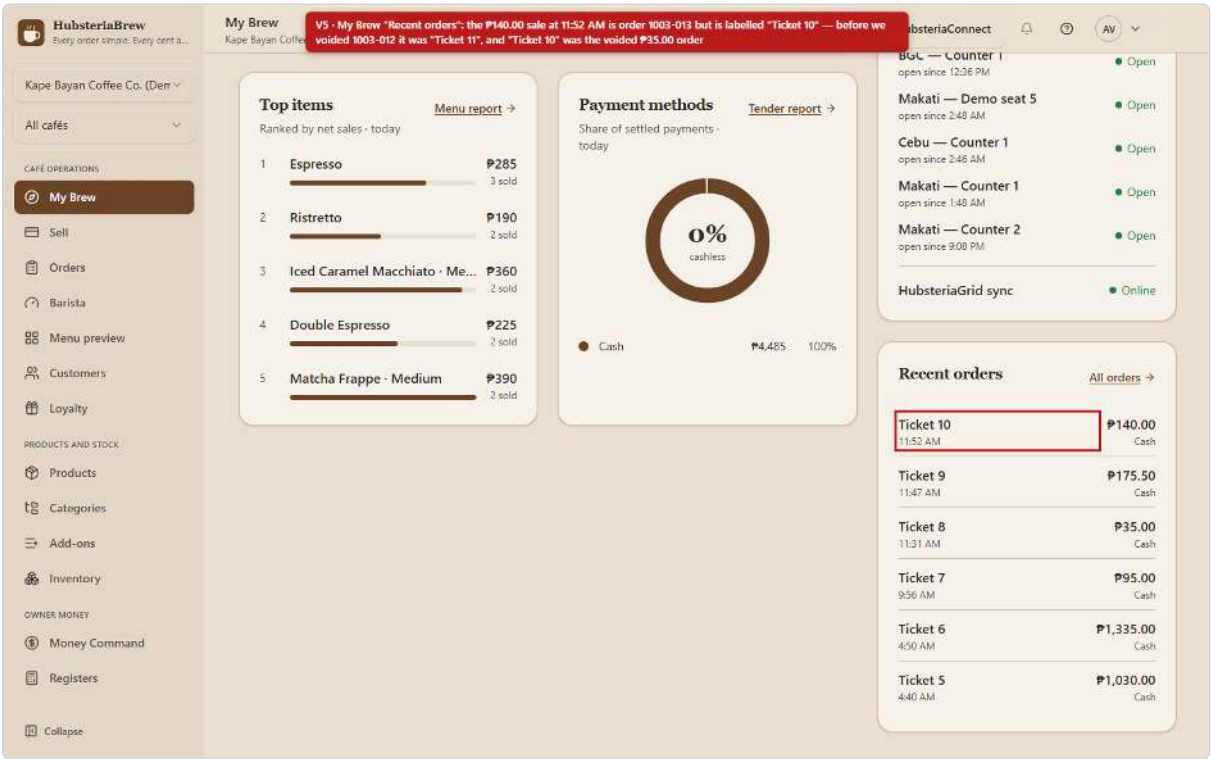

Steps to reproduce:

1. Note My Brew → Recent orders.
2. Void an order (we voided 1003-012).
3. Reload My Brew and compare the "Ticket" labels with the order numbers in Orders.

Expected: Each row shows the order number (e.g. "1003-013"), which never changes.

Actual: Before void: "Ticket 11 | 11:52 AM | ₱140.00 | Cash | Ticket 10 | 11:49 AM | ₱35.00 | Cash | Ticket 9 | 11:47 AM | ₱175.50 |"; after: "Ticket 10 | 11:52 AM | ₱140.00 | Cash | Ticket 9 | 11:47 AM | ₱175.50 | Cash | Ticket 8 | 11:31 AM | ₱35.00 | ".

Suggested fix: Label rows with the order number and link each to its order.

FUN-78: V5, 3 Oct 2026

FUN-79 · Discount reason example "Senior citizen" steers cashiers to a manual senior discount while Senior/PWD is off LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): Still open Unchanged. The Discount dialog still has no Senior/PWD option, and its "Reason (saved in the records)" box still shows the example text "Senior citizen".

Description: The Senior/PWD discount module is switched off until the tax workflow is ready (claim C06, confirmed). But the generic Discount dialog's reason box shows the example text "Senior citizen". A cashier following that hint will key senior discounts as an ordinary peso or percent discount, without the 20% + VAT-exemption treatment or the ID details a senior/PWD discount must record.

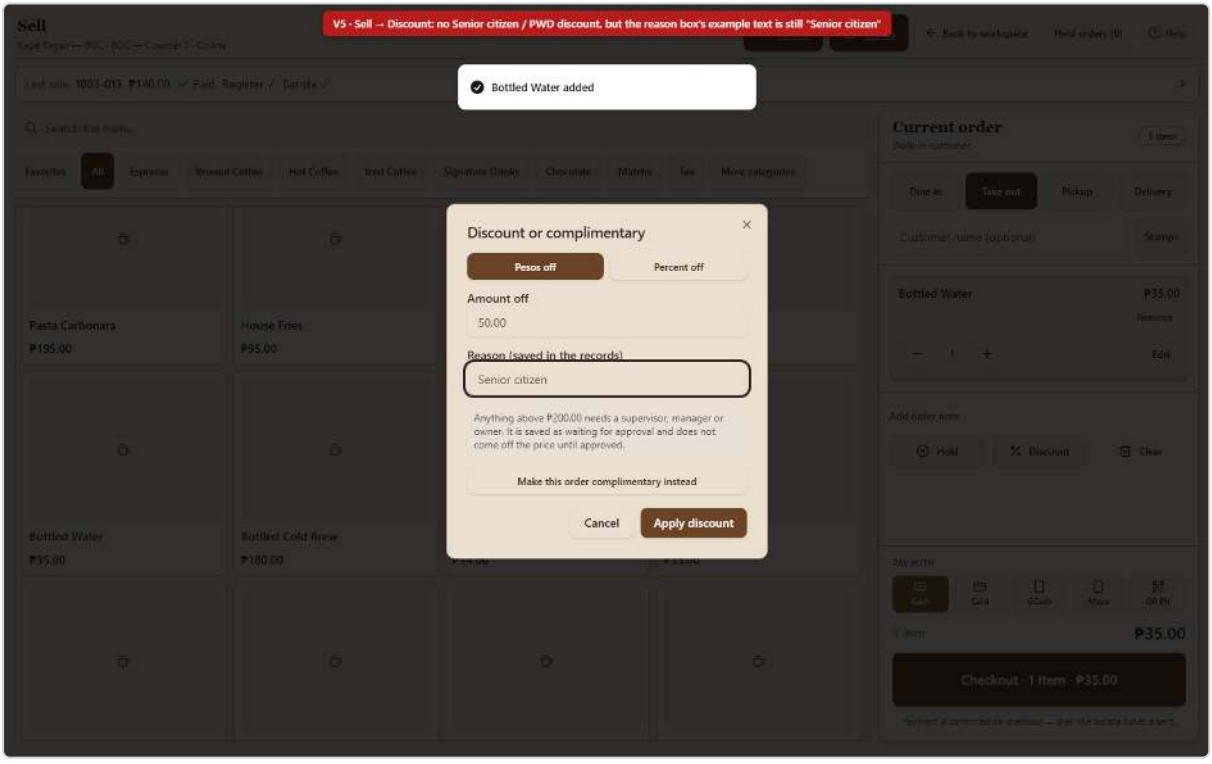

Steps to reproduce:

1. Open /sell, add an item, tap Discount.
2. Read the example text in "Reason (saved in the records)".

Expected: A neutral example ("Loyal customer", "Damaged item"), or a note that senior/PWD discounts are not yet supported.

Actual: Dialog options: Pesos off / Percent off / Make this order complimentary instead; reason placeholder "Senior citizen".

Suggested fix: Change the example text, and until the compliance module ships, add a short note that senior/PWD discounts need the dedicated flow.

FUN-79: V5, 3 Oct 2026

FUN-84 · My Brew cards say "No sales yesterday" although yesterday had 8 paid orders (₱2,585) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): New First found in this V5 audit.

Description: Under Net sales, Paid orders and Average order, My Brew shows the chip "No sales yesterday". Money Command → Yesterday shows 8 orders and ₱2,585.00, and Orders lists 1002-001 to 1002-008 (1:07 PM to 10:37 PM). The comparison is really "yesterday up to this time of day", which only the small grey line "No sales yesterday by this time" says. Before 1 PM an owner reads that yesterday had no sales at all.

Steps to reproduce:

1. Before 1 PM, open My Brew (Today); read the chips under the three cards.
2. Click Money Command → Yesterday.

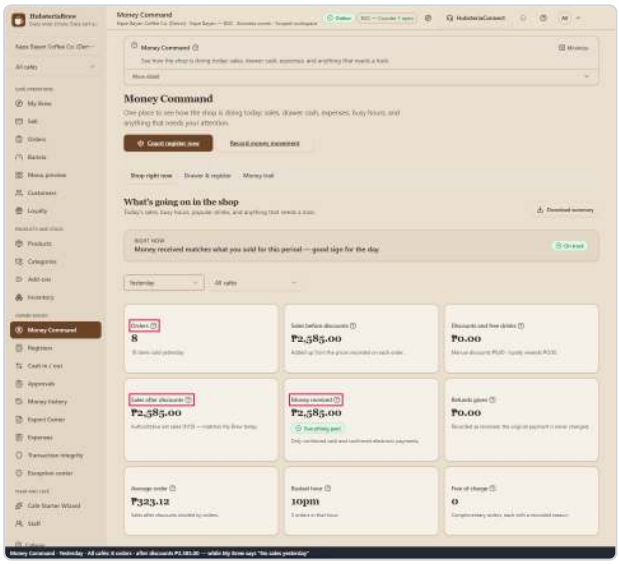

Expected: A chip that says what it compares, e.g. "Yesterday by 12:00 PM: ₱0" or "— vs same time yesterday".

Actual: My Brew 2026-10-03T03:52:53.713Z: ["No sales yesterday by this time Trend: the last 7 days. ","No sales yesterday "]. Money Command Yesterday · All cafés: 8 orders, ₱2,585.00; Orders yesterday: 8 rows, first at 1:07 PM.

Suggested fix: Word the chip as a same-time comparison ("vs. this time yesterday") or compare with the whole of yesterday.

FUN-84 (1 of 2) · V5, 3 Oct 2026

FUN-84 (2 of 2) · V5, 3 Oct 2026

FUN-85 · My Brew's Registers card shows "open since 12:36 PM" with no date for shifts opened 3–4 days ago LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): New First found in this V5 audit.

Description: The new Registers card on My Brew lists all five open shifts with a time only: "BGC — Counter 1 · open since 12:36 PM", "Makati — Counter 2 · open since 9:08 PM", and so on. Registers shows they were opened on 29 and 30 Sep (BGC — Counter 1: 9/30/2026, 12:36:34 PM). On 3 Oct an owner reads "open since 12:36 PM" as today's shift and cannot see that a drawer has been open for three days. Related to FUN-30 (no warning for shifts left open from a previous day).

Steps to reproduce:

1. Open My Brew; read the Registers card.
2. Open Registers; read "Opened at" for the same counters.

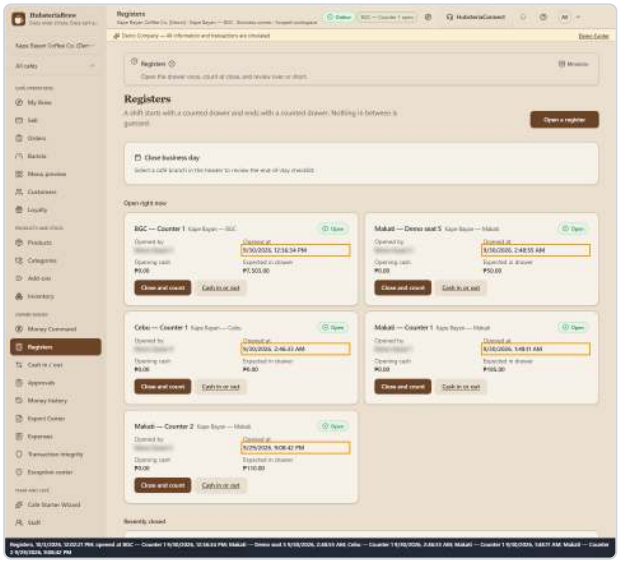

Expected: Show the date (or "3 days") for shifts not opened today, and flag them.

Actual: My Brew: ["BGC — Counter 1 | open since 12:36 PM","Makati — Demo seat 5 | open since 2:48 AM","Cebu — Counter 1 | open since 2:46 AM","Makati — Counter 1 | open since 1:48 AM","Makati — Counter 2 | open since 9:08 PM"]. Registers: ["BGC — Counter 1 | 9/30/2026, 12:36:34 PM","Makati — Demo seat 5 | 9/30/2026, 2:48:55 AM","Cebu — Counter 1 | 9/30/2026, 2:46:33 AM","Makati — Counter 1 | 9/30/2026, 1:48:11 AM","Makati — Counter 2 | 9/29/2026, 9:08:42 PM"].

Suggested fix: Format "open since" with the date when it is not today (e.g. "since 30 Sep, 12:36 PM · 3 days") and add the stale-shift warning from FUN-30.

FUN-85 (1 of 2) · V5, 3 Oct 2026

FUN-85 (2 of 2) · V5, 3 Oct 2026

FUN-86 · After an over-tendered cash sale, the confirmation never shows the change to hand back (only a short toast) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/checkout`

Re-test (V5): New First found in this V5 audit.

Description: When the customer pays more than the total, Checkout shows "Change due" before payment, but the confirmation screen afterwards shows only "Payment confirmed — ₱35.00", the payment method, total, cashier, register and time. The amount received and the change to give back appear only in a toast ("₱100.00 received · ₱65.00 change …") that disappears after a few seconds. A cashier who looks away while the sale completes has to count the change from memory or open the order slip.

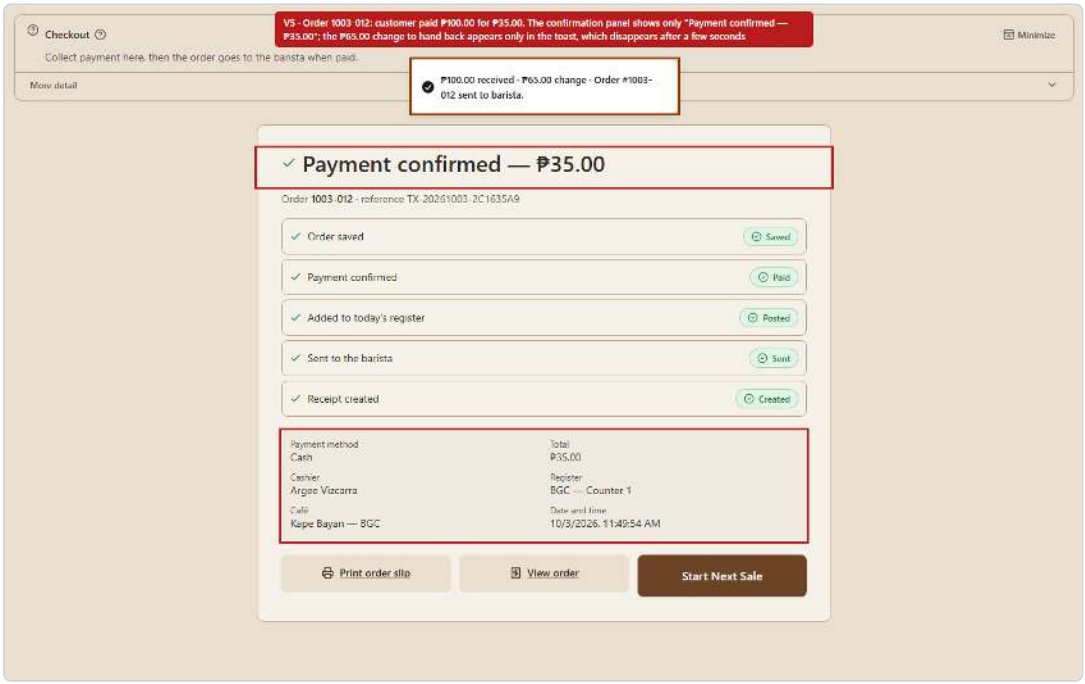

Steps to reproduce:

1. Sell 1 × Bottled Water (₱35.00).
2. On Checkout type 100 in "Other amount" (Change due ₱65.00) and tap "Accept ₱100.00 & Send Order".
3. Read the confirmation screen after the toast has gone.

Expected: The confirmation repeats "Cash received ₱100.00 · Change to give ₱65.00" in large type until "Start Next Sale" is tapped.

Actual: 1003-012: confirmation "Payment confirmed — ₱35.00 | … | Payment method | Cash | Total | ₱35.00 | …" — no received or change line; toast "₱100.00 received · ₱65.00 change · Order #1003-012 sent to barista.". Same for 1003-013 (₱200 for ₱140, toast "₱200.00 received · ₱60.00 change · Order #1003-013 sent to barista.").

Suggested fix: Add "Cash received" and "Change to give" to the confirmation panel for cash sales (the order slip already prints both since FUN-27 was fixed).

FUN-86: V5, 3 Oct 2026

Forms

FRM-04 · Auth email quota: two emails go through, but the sender and higher limit still can't be confirmed from outside HIGH

Severity: HIGH **Page:** `https://hubsteriabrew.com/forgot-password`

Re-test (V5): Not verifiable As in V4, one real sign-up (03:48:08Z) and one real password reset 2 min 43 s later (03:50:51Z) to the +qa5v5 alias were both accepted (200) and the pages said "Check your email". The replies don't name the mail provider, so the user will confirm the From address of the two +qa5v5 emails.

Description: Two auth emails were triggered for the same inbox alias: a sign-up confirmation, then a password reset 2 min 43 s later. Both were accepted. The sign-up page said "We sent a verification link to … Open it to continue setting up your café workspace." and the reset page said "Check your email. If an account exists, a secure reset link is on its way." Supabase's built-in mailer would also accept two emails an hour, so this does not prove the promised own-sender set-up. The deciding evidence is the From address of those two emails.

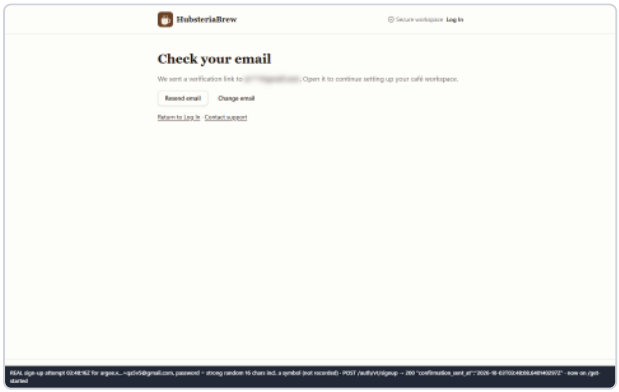

Steps to reproduce:

1. Real sign-up at /get-started for the +qa5v5 alias of the QA inbox (03:48:08Z)
2. Wait more than 2 minutes and open /forgot-password
3. Enter the same address and click "Send reset link" (03:50:51Z)
4. (To finish) the user checks the sender of both emails in the +qa5v5 mailbox

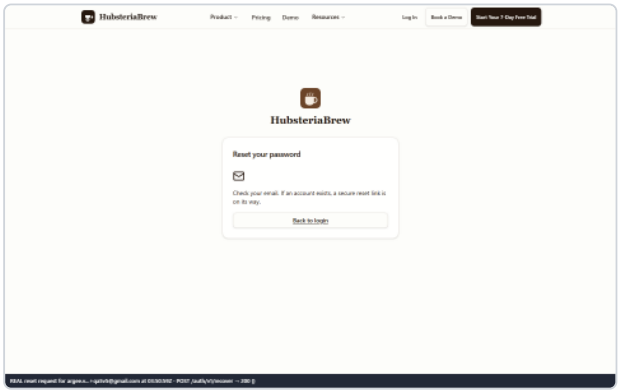

Expected: Auth emails come from the café's own sender, with a limit that covers normal sign-up and reset traffic.

Actual: POST /auth/v1/signup → 200 (confirmation_sent_at 2026-10-03T03:48:08Z); POST /auth/v1/recover?redirect_to=https://hubsteriabrew.com/reset-password → 200 {} at 03:50:51Z. Response headers show only Supabase/Cloudflare gateway headers (sb-project-ref, cf-ray); no mail provider.

Suggested fix: Configure custom SMTP (own sender domain) in Supabase Auth and raise the email rate limit; confirm with the From header of a real email.

FRM-04 (1 of 2) · V5, 3 Oct 2026

FRM-04 (2 of 2) · V5, 3 Oct 2026

FRM-07 · "Book a Demo" silently refuses a junk phone number: the button does nothing and no message explains why MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/contact`

Re-test (V5): Partially fixed Unchanged from V4: a name of only spaces gets "Enter your name.", but a junk phone ("abcdefghij", "123", 22 digits) is still blocked silently. "Book a Demo" does nothing and no message points at the phone.

Description: Fill the Book a Demo form correctly, then type letters, a 3-digit number or a 22-digit number in the optional Phone field. Clicking "Book a Demo" does nothing: no message appears, the phone field is not marked invalid, and no request is sent. A visitor cannot tell why the form will not send and may give up. Empty or space-only Name and Café fields now get clear messages.

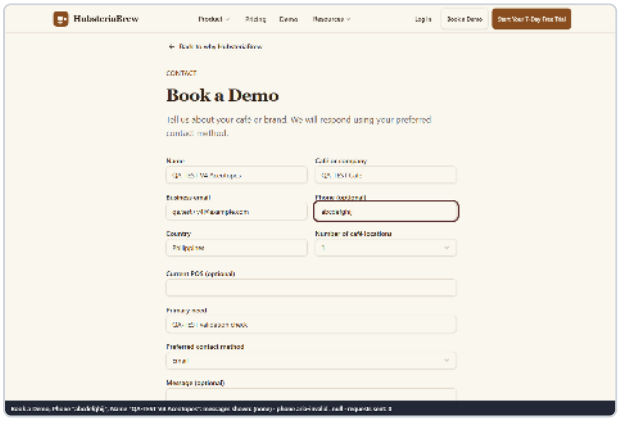

Steps to reproduce:

1. Open /contact and fill it validly
2. Change Phone to "abcdefghij" (also "123", "0917123456789012345678")
3. Click "Book a Demo" (writes intercepted)

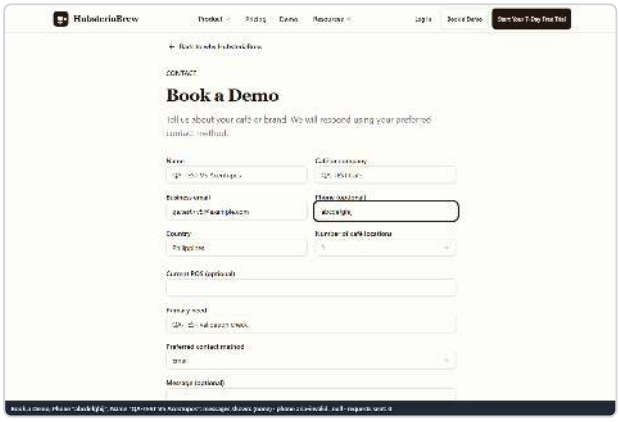

Expected: A message under Phone, e.g. "Enter a phone number using digits only, like 0917 123 4567."

Actual: Phone abcdefghij / 123 / 22 digits → 0 requests, no message, phone aria-invalid null, no native validation message (type=tel, no pattern). Name " " → "Enter your name.", 0 requests.

Suggested fix: Show the phone rule as an inline message and set aria-invalid on the phone field.

FRM-07 (1 of 2) · V4

FRM-07 (2 of 2) · V5, 3 Oct 2026

FRM-06 · Some forms still disable Save with no explanation (category name, T2 name, cash in/out ₱0) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/categories`, `/consultant/invitations`, `/cash-movements`

Re-test (V5): Partially fixed Unchanged from V4. Record an expense still explains itself ("Choose what kind of cost this is."), but a category or T2 name of only spaces still greys the button out with no message, and Cash in / out does the same for an amount of 0.

Description: In Add category, a name of three spaces leaves "Save category" greyed out with no message. The T2 invitation form does the same for a name of spaces. In Cash in / out, with the register, reason type and reason filled, an amount of 0 greys out "Review" with no message. The owner cannot tell which field is the problem. Record an expense, in contrast, now names the missing field.

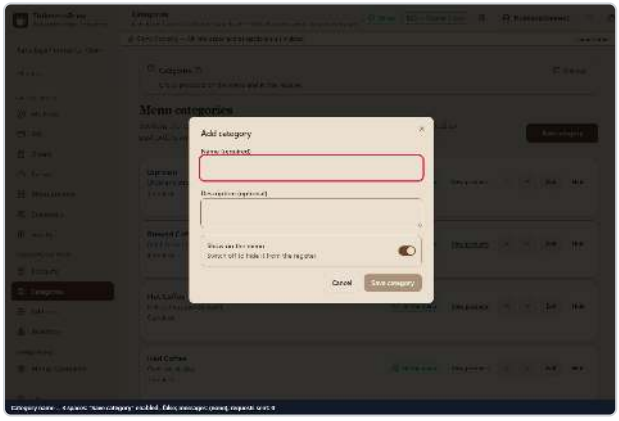

Steps to reproduce:

1. Categories → Add category, name = 3 spaces, Tab
2. Consultant Control Center → T2 invitations, Name = 3 spaces, valid email
3. Cash in / out → pick register and reason type, Amount 0, Reason filled (typed only, never submitted)
4. Look at the button and for any message

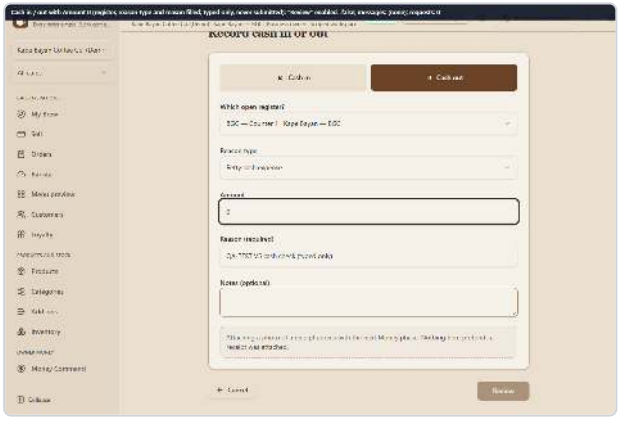

Expected: A short message next to the field ("Enter a name", "Enter an amount greater than zero").

Actual: Category: "Save category" disabled, no message, 0 requests. T2: "Create T2 invitation" disabled, no message, 0 requests. Cash: "Review" disabled, no message, 0 requests. Expenses: "Choose what kind of cost this is."

Suggested fix: Show the reason inline (the expense form already does), and mark the field aria-invalid.

FRM-06 (1 of 2) · V5, 3 Oct 2026

FRM-06 (2 of 2) · V5, 3 Oct 2026

FRM-09 · The T2 invitation form still accepts clearly invalid email addresses ("a b@c.com", "a@b") LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/consultant/invitations`

Re-test (V5): Partially fixed (V4: Medium) Better than V4: sign-up, log-in and password reset now refuse all five bad emails with "Enter a valid email address." and send nothing. The T2 invitation form is unchanged and still sends "a b@c.com" with no message. Severity lowered because only that one consultant-only form is left.

Description: Every public form (sign-up, log-in, reset, Book a Demo) and Add customer now reject malformed emails. The one exception is Consultant Control Center → T2 invitations: with Name filled and Email "a b@c.com", "Create T2 invitation" stays enabled, no message appears, and the invitation request is sent with that address (intercepted by the test). An invitation to a broken address would never arrive.

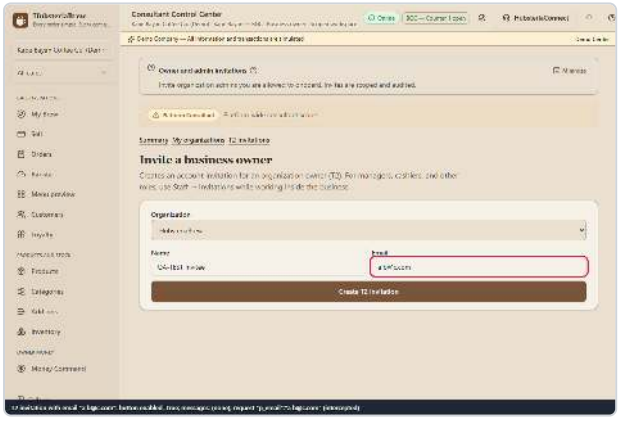

Steps to reproduce:

1. Consultant Control Center → T2 invitations
2. Choose an organization, Name "QA-TEST Invitee", Email "a b@c.com"
3. Click "Create T2 invitation" (request intercepted, nothing saved)
4. Compare: /get-started with "a@b..com", /auth with "a@b"

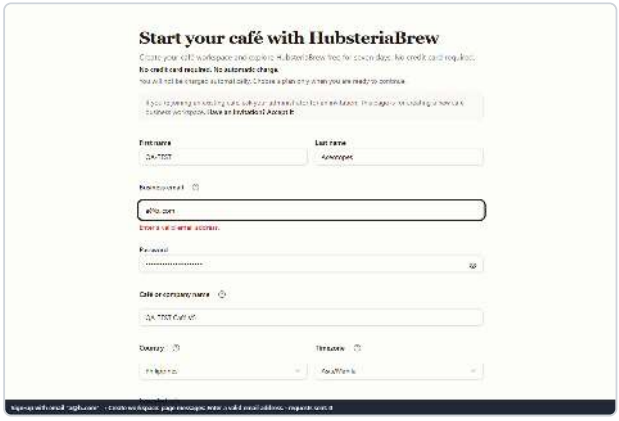

Expected: The same email rule as the other forms: "Enter a valid email address." and nothing sent.

Actual: T2: button enabled, no message, POST rpc/cafe_consultant_invite_t2 {"p_email":"a b@c.com",...} (aborted). Sign-up a@b..com and log-in/reset a@b → "Enter a valid email address.", 0 requests.

Suggested fix: Reuse the shared email validator on the T2 invitation form (and server-side in cafe_consultant_invite_t2).

FRM-09 (1 of 2) · V5, 3 Oct 2026

FRM-09 (2 of 2) · V5, 3 Oct 2026

FRM-10 · Sign-up blocks weak passwords on the page; server-side enforcement could not be confirmed LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/get-started`

Re-test (V5): Partially fixed Unchanged from V4: the page refuses "password", "abc12345", "12345678" and 8 spaces ("Password must be at least 12 characters.") and "Password1234" ("Choose a stronger password..."), sending nothing. Whether the server itself rejects weak passwords still cannot be seen; the real sign-up had to use a strong one.

Description: The sign-up page checks passwords before sending: short ones and common ones like "Password1234" get a clear message and no request. This round's one real sign-up first tried "password" and "abc12345"; both were stopped on the page, so the only request sent used a strong random password. Whether the auth server would also refuse a weak password (if the page check were bypassed) cannot be tested from outside without bypassing the page.

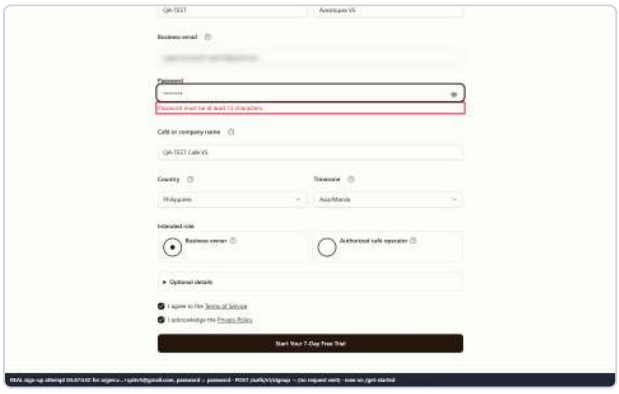

Steps to reproduce:

1. Open /get-started, fill validly for the +qa5v5 alias
2. Password "password" → submit; then "abc12345" → submit
3. Strong random password → submit (1 real sign-up, 03:48:08Z)
4. Dry run: "Password1234" → submit

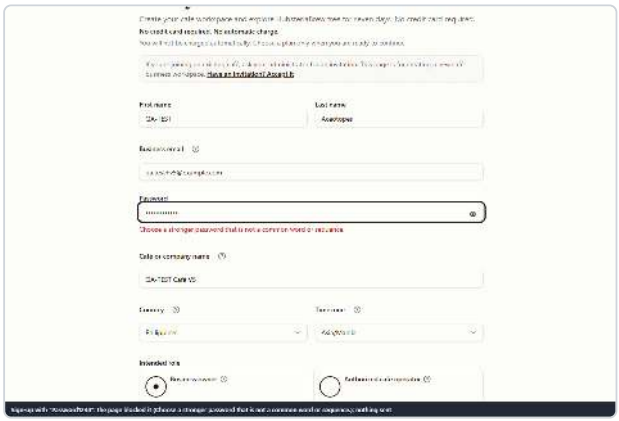

Expected: Weak passwords are refused by both the page and the auth server (Supabase minimum length / leaked-password check).

Actual: "password", "abc12345", "12345678", 8 spaces → "Password must be at least 12 characters.", 0 requests; "Password1234" → "Choose a stronger password that is not a common word or sequence.", 0 requests; strong → POST /auth/v1/signup 200.

Suggested fix: Set the same minimum length and leaked-password protection in Supabase Auth settings.

FRM-10 (1 of 2) · V5, 3 Oct 2026

FRM-10 (2 of 2) · V5, 3 Oct 2026

FRM-11 · Future-dated expenses are blocked on the page only; the database check is still to come LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/expenses (Record an expense, opened from the sidebar)`

Re-test (V5): Partially fixed Unchanged: Expenses still opens from the sidebar (typed URL redirects); a future date gets "Expenses can't be dated in the future." and Save stays disabled. The database-side check still cannot be tested without bypassing the page.

Description: Expenses is hidden from typed URLs in the pilot but still opens from the sidebar. In Record an expense, the date box allows today at most (max = today), and typing 01/01/2030 shows "Expenses can't be dated in the future." with Save disabled. That protects the normal path. A database rule that refuses future dates could not be checked without bypassing the page.

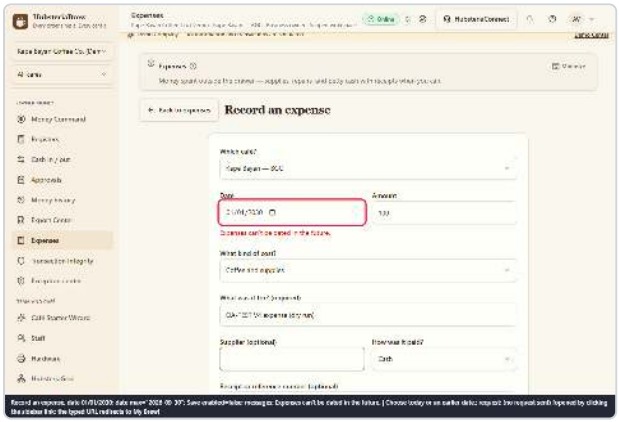

Steps to reproduce:

1. Products → sidebar Expenses → Record an expense
2. Choose a cost type, Date 01/01/2030, Amount 100, description "QA-TEST V5 expense (dry run)"
3. Press Tab and look at "Save expense" (not pressed)

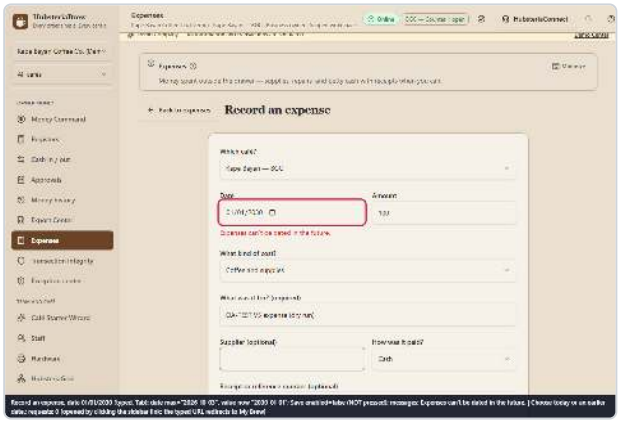

Expected: Future dates refused by the page and by the database.

Actual: max="2026-10-03"; "Expenses can't be dated in the future." and "Value must be 10/03/2026 or earlier."; date aria-invalid=true; Save disabled; 0 requests.

Suggested fix: Add a CHECK (spent_on <= current_date in café time) or the same check in the save function.

FRM-11 (1 of 2) · V4

FRM-11 (2 of 2) · V5, 3 Oct 2026

FRM-12 · "Book a Demo" still prints a server error page as raw HTML ("`<html>``<body>` Service Unavailable...") LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/contact`

Re-test (V5): Partially fixed Unchanged from V4: a dropped connection shows "No connection to the server... nothing was saved.", but a server error page (503, mocked) is still printed as raw HTML: "`<html>``<body>` Service Unavailable `</body>``</html>` You can also email admin@hubsteriabrew.com directly."

Description: If the server answers Book a Demo with an error page (for example during an outage), the form shows the page's raw HTML to the visitor, followed by "You can also email admin@hubsteriabrew.com directly." It looks broken and unprofessional. The offline case is handled well.

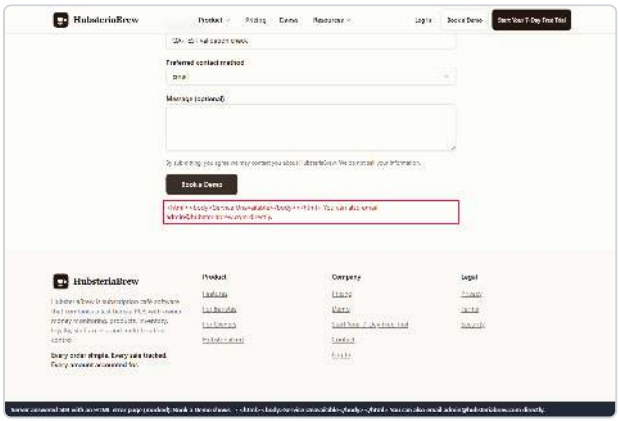

Steps to reproduce:

1. Open /contact and fill it validly
2. Click "Book a Demo" while the server answers 503 with an HTML page (mocked)

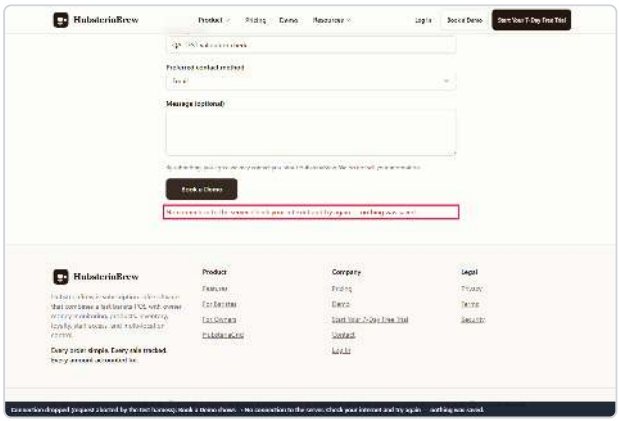

Expected: A friendly message such as "We couldn't send your request right now. Please try again or email ...".

Actual: Offline → "No connection to the server. Check your internet and try again — nothing was saved." 503 → "`<html>``<body>` Service Unavailable `</body>``</html>` You can also email admin@hubsteriabrew.com directly."

Suggested fix: Map any non-JSON or 5xx reply to the friendly message; never print the response body.

FRM-12 (1 of 2) · V5, 3 Oct 2026

FRM-12 (2 of 2) · V5, 3 Oct 2026

FRM-14 · Add-ons "Smallest number of choices" still silently turns -1 into 1 LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/modifiers (Add a choice group)`

Re-test (V5): Still open Unchanged: in Add-ons → Add a choice group, typing -1 in "Smallest number of choices" silently becomes 1 and is sent as minimum_selections 1, with no message.

Description: When an owner types -1 in "Smallest number of choices", the box quietly changes it to 1 and the group would be saved with a minimum of one choice. That makes the choice group effectively required without the owner asking for it. No message explains the change.

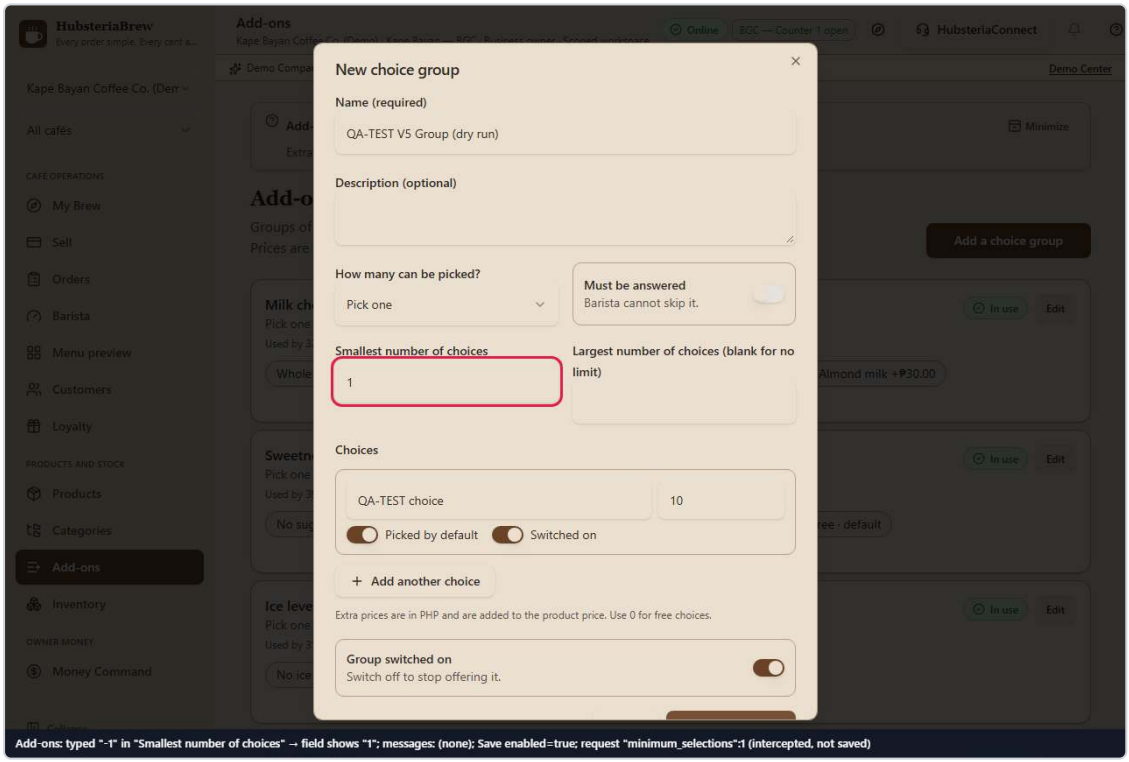

Steps to reproduce:

1. Add-ons → Add a choice group
2. Name "QA-TEST V5 Group (dry run)", one choice at ₱10
3. Type -1 in "Smallest number of choices"
4. Click "Save choice group" (request intercepted, nothing saved)

Expected: "Enter 0 or more." and nothing saved, or the value kept as typed and refused.

Actual: Field shows "1"; no message; Save enabled; request "minimum_selections":1 (aborted).

Suggested fix: Validate instead of clamping: show "Enter 0 or more" and keep the typed value until corrected.

FRM-14: V5, 3 Oct 2026

FRM-18 · Validation errors aren't consistently linked to their fields for screen readers

LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/contact`, `/auth`, `/forgot-password`, `/appearance`

Re-test (V5): Still open Unchanged on Book a Demo: an empty submit shows 7 messages, but only Name, Café/company and Number of locations are aria-invalid and only Name is linked to its message. /auth and /forgot-password still rely on browser bubbles. The redesigned Appearance Studio colour error is now not linked at all (V4 had aria-invalid and described-by).

Description: Screen-reader users hear a field's error only if the field is marked invalid and points to its message. On Book a Demo, after an empty submit, 7 red messages appear, but only 3 fields are marked invalid and only Name is linked to its message. Log-in and Forgot password show only the browser's own bubble. In Appearance Studio, the accent colour box with "#12" is neither marked invalid nor linked to "Accent colour must be a six-digit hex code."

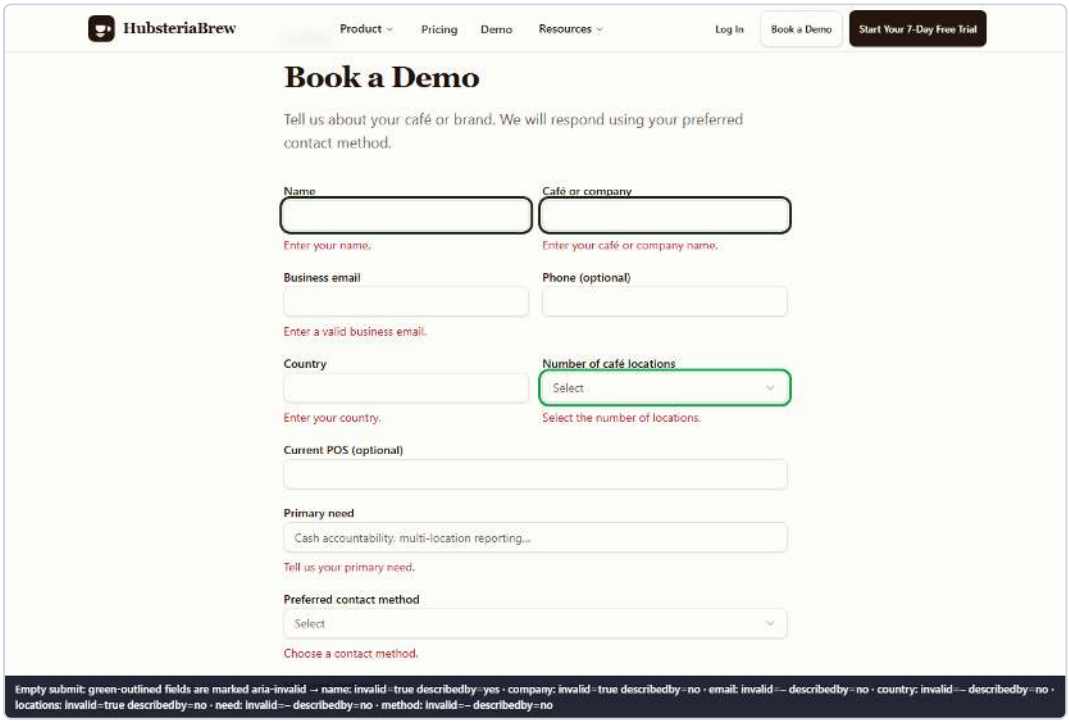

Steps to reproduce:

1. Open /contact and click "Book a Demo" with the form empty
2. Inspect aria-invalid and aria-describedby on each field
3. Repeat on /auth and /forgot-password; Appearance Studio → Colours, accent "#12"

Expected: Every field with an error has aria-invalid="true" and aria-describedby pointing at its message.

Actual: Contact: name invalid+describedby; company, locations invalid only; email, country, need, method neither. /auth, /forgot-password: required, native bubble only, no aria-invalid. Appearance accent hex: aria-invalid null, no describedby.

Suggested fix: Use one field-error component that sets aria-invalid and aria-describedby for every field.

FRM-18: V5, 3 Oct 2026

FRM-19 · Money history still accepts a date range with "From" after "To" and blames the range size LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/money-history`

Re-test (V5): Partially fixed Unchanged from V4: Export Center refuses a reversed range ("The start date must be on or before the end date.", nothing sent), but Money history still takes From 09/30 and To 09/01 with no warning and says "No shifts in this period — Pick a wider date range or another café".

Description: In Money history, setting From to 30 Sep and To to 1 Sep gives an empty list that says "No shifts in this period. Pick a wider date range or another café." The owner may think there were no shifts, when the dates are simply the wrong way round. Export Center already explains the same mistake.

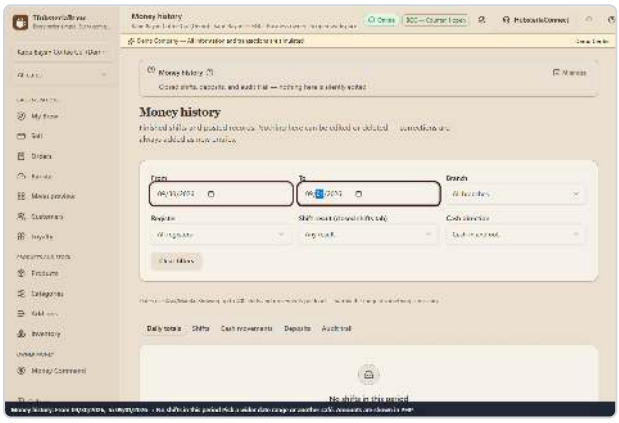

Steps to reproduce:

1. Money history: set From 09/30/2026 and To 09/01/2026
2. Read the list and any message
3. Compare: Export Center with the same dates → Download CSV

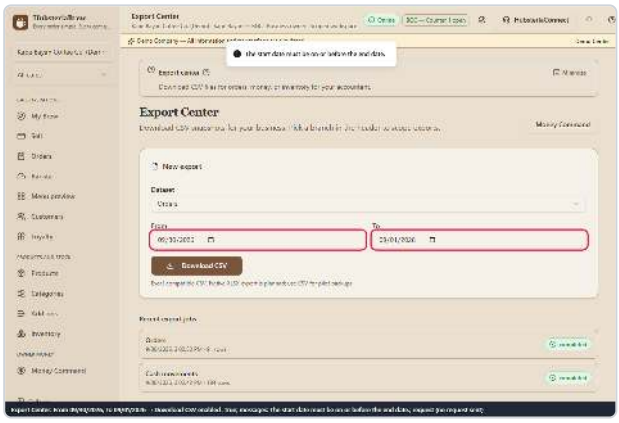

Expected: "From must be on or before To" (or swap the dates), as Export Center does.

Actual: Money history: no message, empty list "No shifts in this period · Pick a wider date range or another café". Export Center: toast "The start date must be on or before the end date.", 0 requests.

Suggested fix: Reuse the Export Center check on Money history (and Orders).

FRM-19 (1 of 2) · V5, 3 Oct 2026

FRM-19 (2 of 2) · V5, 3 Oct 2026

FRM-20 · Pricing Setup override box silently discards what you type; invalid values stay on screen LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/admin/pricing (Location pricing tab, opened from the sidebar)`

Re-test (V5): Partially fixed Unchanged from V4: Pricing Setup still opens from the sidebar. Typing 0 (or a valid 85) in an override box and pressing Tab silently snaps back to 90.00 with no message and no save; "-50" and "abc" get a toast but stay on screen under "Inherits organization".

Description: On Location pricing, an owner types a café price into Espresso's Override box and leaves it. A valid 85 or a 0 quietly turns back into 90.00: no message and no save. 0 + Enter leaves "0" in the box with no save. "-50" gets a toast but stays in the box, still labelled "Inherits organization". The owner cannot tell what, if anything, was saved.

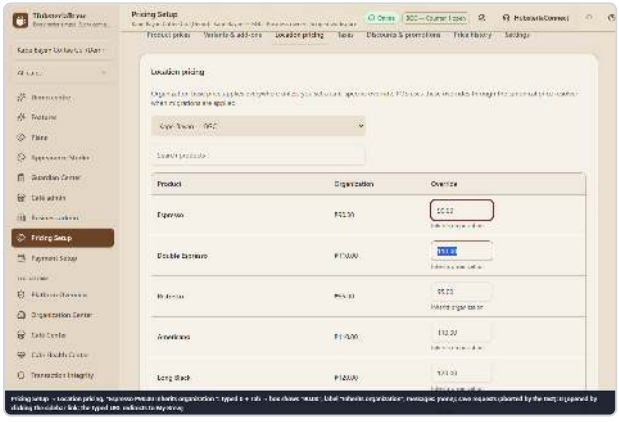

Steps to reproduce:

1. Products → sidebar Pricing Setup → Location pricing, café Kape Bayan — BGC
2. Type 0 in the Espresso Override box and press Tab (writes intercepted)
3. Repeat with -50, abc and 85 on a fresh page

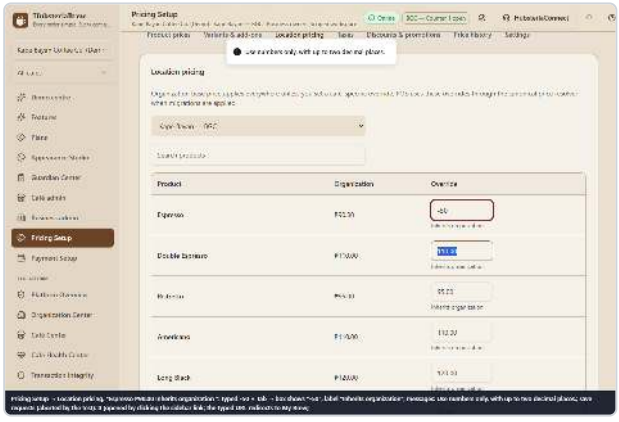

Expected: Either a clear Save button per row or an explicit "Saved"/"Not saved: ..." message; invalid values reverted or marked invalid.

Actual: 0 + Tab → "90.00", no message, 0 requests. 0 + Enter → "0", no message, 0 requests. 85 + Tab (fresh page) → "90.00", no message, 0 requests. -50 / abc + Tab → toast "Use numbers only, with up to two decimal places.", box keeps the text, label "Inherits organization".

Suggested fix: Add an explicit Save per override (or a "Saved" confirmation), and mark invalid values with aria-invalid and an inline message.

FRM-20 (1 of 2) · V5, 3 Oct 2026

FRM-20 (2 of 2) · V5, 3 Oct 2026

FRM-22 · Add stock item accepts a 14-digit low-stock warning level with no message LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/inventory (Add stock item)`

Re-test (V5): Still open Unchanged since V4: Add stock item still accepts a 14-digit "Warn me below" level with no message; the save request carries low_threshold_milli 99999999999999000 (intercepted, nothing saved).

Description: In Add stock item, "Warn me below" accepts 99,999,999,999,999 g. Save stays enabled and no message appears, so the item would be "low" for ever and its low-stock warning would be meaningless. Negative, letter and 4-decimal values are refused with a toast.

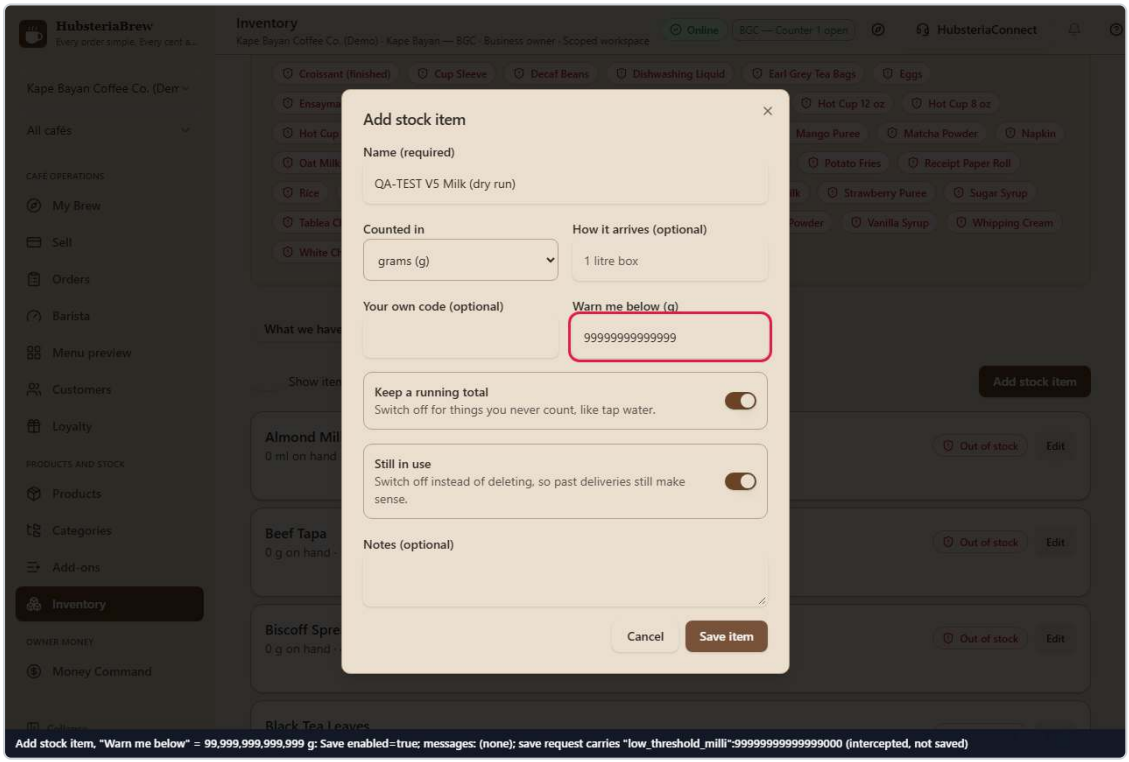

Steps to reproduce:

1. Inventory → Add stock item
2. Name "QA-TEST V5 Milk (dry run)", Counted in grams
3. Warn me below: 99999999999999, Tab
4. Click "Save item" (request intercepted, nothing saved)

Expected: A sensible upper limit with a message, e.g. "Enter a level below 1,000,000".

Actual: Save enabled; no message; POST /rest/v1/cafe_inventory_items {..."low_threshold_milli":99999999999999000...} (aborted by the test).

Suggested fix: Cap the threshold on the page and in the database (CHECK low_threshold_milli < ...).

FRM-22: V5, 3 Oct 2026

UI/Responsive

UI-06 · Internal/developer jargon shown on public marketing pages MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/features`

Re-test (V5): Still open /features still shows "(idempotent operations)", "(in active rollout)" and "Preview — operational with limitations until Guardian verification completes"; /multi-location still says "Platform Control Center (platform administrators)" and /security names "Supabase Auth".

Description: Public pages still use internal and technical wording a café owner will not understand: "idempotent operations", "in active rollout", "until Guardian verification completes" on /features, "Platform Control Center (platform administrators)" on /multi-location and "Supabase Auth" on /security.

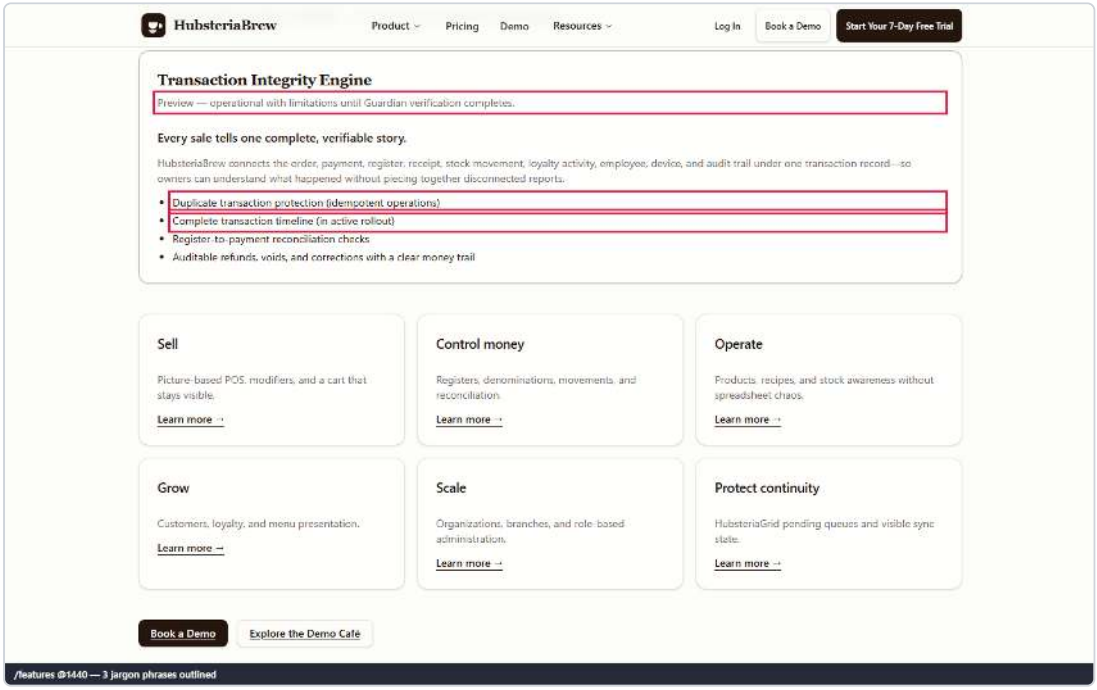

Steps to reproduce:

1. Open /features at 1440×900
2. Read the Transaction Integrity Engine card
3. Open /multi-location and /security

Expected: Marketing pages use plain café language.

Actual: /features: Preview — operational with limitations until Guardian verification completes. | Duplicate transaction protection (idempotent operations) | Complete transaction timeline (in active rollout); /: none; /multi-location: Platform Control Center (platform administrators); /security: Sign-in is handled by Supabase Auth; we never see or store your password.

Suggested fix: Rewrite these lines in plain language (e.g. "Tapping twice never charges twice") and drop internal names.

UI-06: V5, 3 Oct 2026

UI-09 · Tab bars on phones hide tabs off-screen: Settings (6 of 9), Orders ("Everything"), Money Command MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/settings`

Re-test (V5): Partially fixed Unchanged since V4: the Settings tab bar scrolls sideways but 6 of 9 tabs (Approvals cut, then Language & clock … BrewGuide) are off-screen with no scroll hint; Orders hides "Everything"; Money Command (opened from the sidebar) cuts "Money trail" and leaves "How they paid" / "Needs attention" outside their bar.

Description: At 375px the Settings tab bar is one sideways-scrolling row. Only Business, Cafés and Counting cash fit; Approvals is cut and Language & clock, This device, Ready to open, System and BrewGuide are off-screen with no arrow or fade to show there is more. On Orders the fifth tab "Everything" is off-screen the same way, and on Money Command "Money trail" is cut and two sub-tabs sit outside their bar.

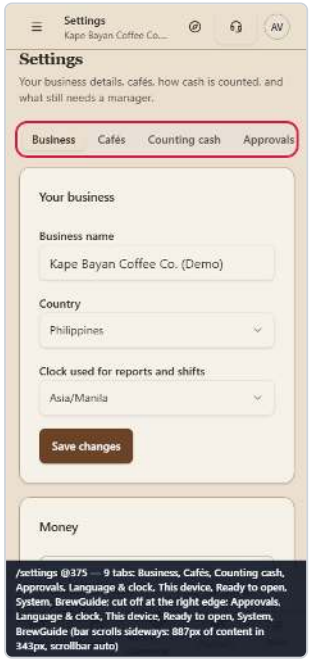

Steps to reproduce:

1. Open /settings at 375×812 and look at the tab bar
2. Open /orders and look at the tab bar
3. From a workspace page, click "Money Command" in the sidebar (a typed URL redirects to My Brew during the pilot) and look at the tab bars

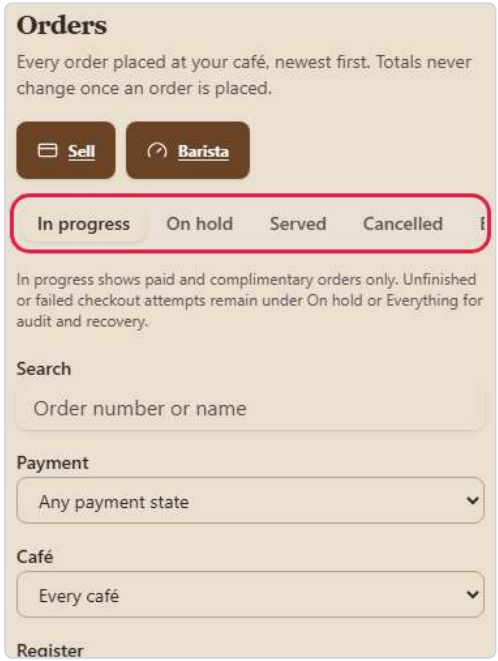

Expected: All tabs are visible (wrapped or as a menu), or the bar clearly shows it scrolls.

Actual: settings: Approvals, Language & clock, This device, Ready to open, System, BrewGuide off-screen (bar 887px in 343px); orders: Everything off-screen; money-command (/money-command): Money trail, How they paid, Needs attention off-screen/outside bar

Suggested fix: Wrap tabs onto a second row, or add a fade + arrow at the scroll edge; for 9 Settings tabs use a select menu on phones.

UI-09 (1 of 2) · V5, 3 Oct 2026

UI-09 (2 of 2) · V5, 3 Oct 2026

UI-10 · Money and count figures use old-style serif numerals: "₱0.00" reads as "₱o.oo" MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/money-command`

Re-test (V5): Still open Unchanged: KPI figures on Money Command (opened from the sidebar), the redesigned My Brew and Guardian Center are still Fraunces with old-style numerals, so "₱0.00" reads as "₱o.oo" and "0" as "o".

Description: The big numbers on Money Command, My Brew and Guardian Center use the Fraunces display font with old-style figures. Zeros look like the letter "o", so "Discounts and free drinks ₱0.00" reads as "₱o.oo", "Free of charge 0" as "o", and My Brew's "Cash variance ₱0.00" and "Paid orders 10" as "₱o.oo" and "1o". On money screens this makes figures harder to trust at a glance.

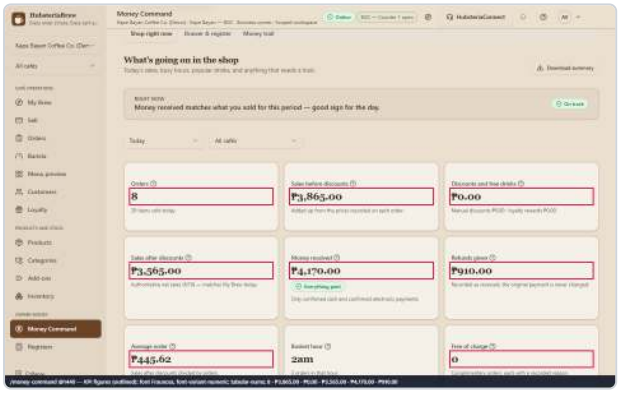

Steps to reproduce:

1. From a workspace page, click "Money Command" in the sidebar (a typed URL redirects to My Brew during the pilot)
2. Look at the KPI cards (Orders, Discounts and free drinks, Free of charge)
3. Open My Brew and look at Net sales, Paid orders and Cash variance

Expected: Money and count figures use lining numerals (font-variant-numeric: lining-nums tabular-nums) or a sans-serif figure font.

Actual: Money Command: 8 (Fraunces, tabular-nums), ₱3,865.00 (Fraunces, tabular-nums), ₱0.00 (Fraunces, tabular-nums), ₱3,565.00 (Fraunces, tabular-nums), ₱4,170.00 (Fraunces, tabular-nums)

Suggested fix: Add font-variant-numeric: lining-nums tabular-nums to the KPI figure style (or use the body font for numbers).

UI-10 (1 of 2) · V5, 3 Oct 2026

UI-10 (2 of 2) · V5, 3 Oct 2026

UI-21 · On phones the category Edit and Hide buttons are pushed off the card and cannot be tapped MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/categories`

Re-test (V5): Still open Unchanged since V4: at 375px the category action row still does not fit; "Edit" shows only 7px of 47px and "Hide" is completely off the card, so a phone user cannot edit or hide a category.

Description: On Categories at 375px each card has one action row: On the menu · View products · ↑ · ↓ · Edit · Hide. The row is wider than the card, so "Edit" is cut to a 7px sliver at the right edge and "Hide" lies outside the card and the screen. There is no other way on a phone to edit or hide a category from this list.

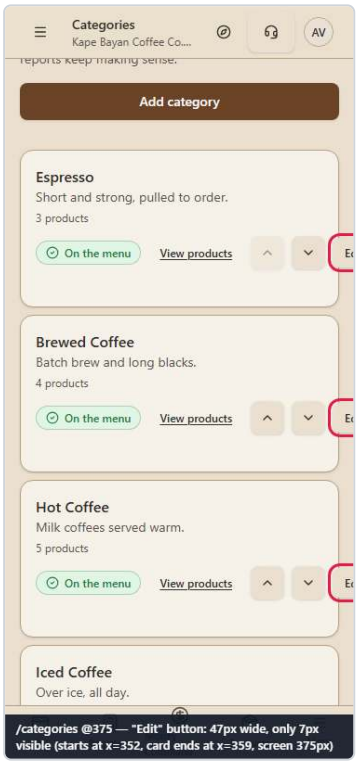

Steps to reproduce:

1. Sign in and open /categories at 375×812
2. Look at the action row of any category card
3. Try to tap "Edit" or "Hide"

Expected: All row actions fit on the card (wrap to a second row on phones).

Actual: Edit: x=352–399px, card ends at 359px, 7 of 47px visible; Hide: x=407–457px, card ends at 359px, 0 of 50px visible

Suggested fix: Let the action row wrap (flex-wrap) or move Edit/Hide into a "⋯" menu on narrow screens.

UI-21: V5, 3 Oct 2026

UI-22 · Signed-in header pushes the account menu off-screen at 1024px and now also at 1280px MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/products`

Re-test (V5): Regressed Sell no longer has the app header, so the check moved to a workspace page (/products). There the register pill now wraps to three lines instead of an 18px sliver, but the account menu (AV) is still off-screen at 1024px and is now also off-screen at 1280px (on screen in V4); at 1024px the bell and HubsteriaConnect are cut too.

Description: On every workspace page the header holds the page title, café line, Online and register pills, BrewGuide, HubsteriaConnect, bell, help and the account menu. At 1024×768 (iPad landscape) the register pill wraps into a 3-line block, Online is hidden, and HubsteriaConnect, the bell and the account menu are pushed past the right edge. At 1180px the account button is half off-screen, and at 1280px (a common laptop) the Online pill reappears and pushes the account menu fully off-screen. The account menu holds sign-out and profile, so it must always be reachable.

Steps to reproduce:

1. Sign in and open /products at 1024×768
2. Look at the right side of the header
3. Try to find the account menu (AV)
4. Repeat at 1180×820 and 1280×800

Expected: The header fits at 1024px and above: pills shorten or move, and the account menu is always reachable.

Actual: 1024px: register pill 61×55px, Online hidden, bell off-screen, account OFF-SCREEN (left 1132px, right 1204px); header content 964px in 784px; 1180px: register pill 61×55px, Online hidden, bell on screen, account OFF-SCREEN (left 1132px, right 1204px); header content 964px in 940px; 1280px: register pill 142×25px, Online shown, bell on screen, account OFF-SCREEN (left 1295px, right 1367px); header content 1127px in 1040px

Suggested fix: Let the header items shrink/wrap (min-width:0), move HubsteriaConnect and the pills into the account menu below ~1366px, and never let the account button leave the viewport.

UI-22 (1 of 2) · V5, 3 Oct 2026

UI-22 (2 of 2) · V5, 3 Oct 2026

UI-39 · On phones the new Sell screen hides which café and register you are selling on, and whether it is online MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): New First found in this V5 audit.

Description: The full-screen Sell header normally reads "Sell · Kape Bayan — BGC · BGC — Counter 1 · Online". At 375px the title and that whole line are squeezed to 0px wide by the Barista / Orders / Back / Held orders / Help buttons, so a phone cashier cannot see the café, the register or the Online status anywhere on the screen. At 768px the line is cut to "Kape Bayan — BGC · BGC — Cou...", hiding the register and Online status. Sell has no app header or sidebar any more, so this line is the only place that tells the cashier where the sale will be recorded.

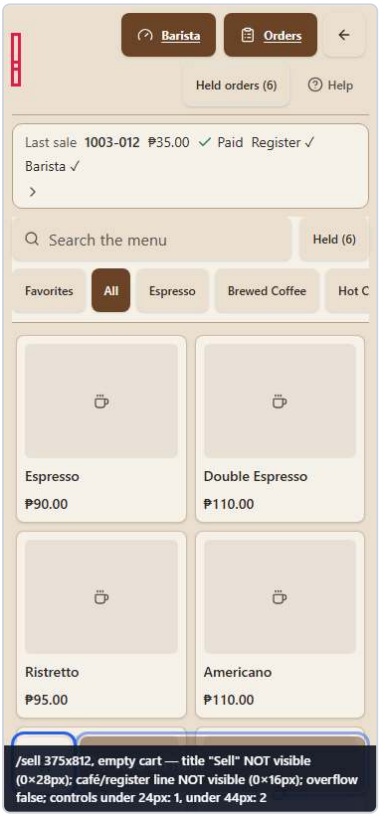

Steps to reproduce:

1. Sign in, switch to the demo café and open /sell at 375×812
2. Look at the top of the screen for the café, register and Online status
3. Repeat at 768×1024

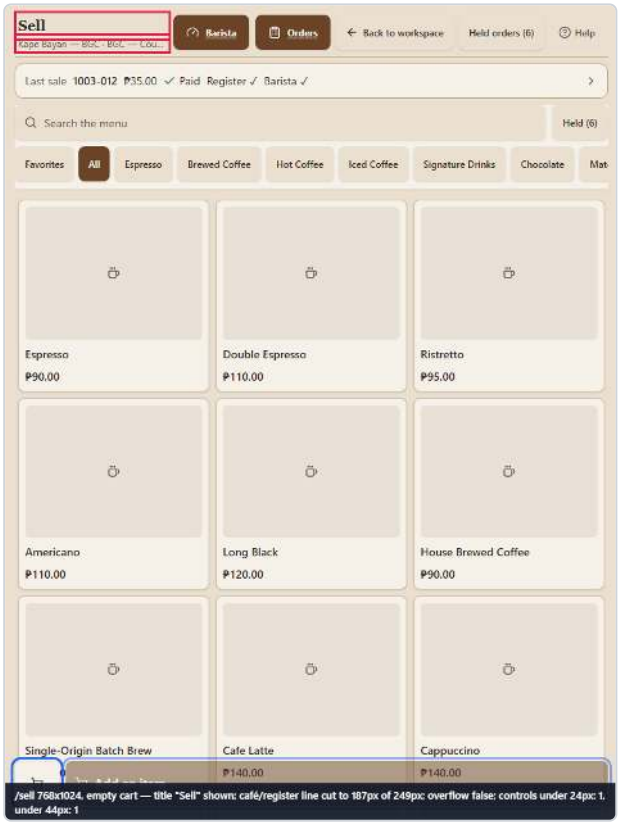

Expected: The café, register and connection status stay visible on every screen size (wrap to two lines or move the buttons into a menu).

Actual: 375px: title "Sell" 0×28px, café line 0×16px (needs 249px); 768px: café line 187 of 249px (cut)

Suggested fix: Give the title block a min-width and let the button row wrap below it on narrow screens (or collapse Barista/Orders/Held/Help into one menu), and never truncate the register/Online part.

UI-39 (1 of 2) · V5, 3 Oct 2026

UI-39 (2 of 2) · V5, 3 Oct 2026

UI-02 · Sell order panel still shows only 2 of 3 order lines on iPad landscape and small laptops LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): Partially fixed (V4: Medium) Better: the redesigned Sell panel shows 2/3 order lines at 1024×768, 2/3 at 1280×800 and 2/3 at 1366×768 (1/3 in V4), and all 3 at 1440×900 and 1920×1080. Each line is now a tall card with its own −/+ row, so the third line still needs scrolling on iPad landscape and small laptops.

Description: On the new full-screen Sell, the order-lines area of the "Current order" panel is 310px tall at 1024×768 and 325px at 1366×768. Each line is a ~130px card (name, add-on, Remove, −/+, Edit), so only two of three lines fit and the cashier scrolls inside the panel to check the third. Hold / Discount / Clear and Checkout are now always visible.

Steps to reproduce:

1. Open /sell at 1366×768 (also 1024×768, 1280×800, 1440×900, 1920×1080)
2. Add Espresso, Double Espresso and Ristretto
3. Look at the Current order panel without scrolling it
4. Count the order lines that are fully visible
5. Clear the order (Clear → Clear order)

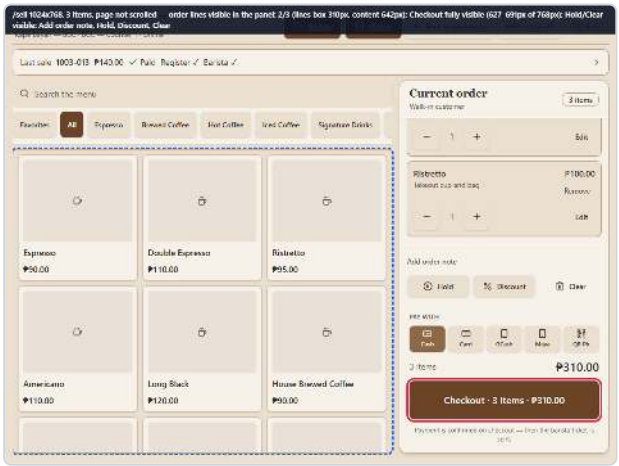

Expected: All lines of a typical 3–5 item order are visible in the order panel at common laptop and tablet sizes.

Actual: 1024×768: lines box 310px (content 642px), lines visible 2/3; 1280×800: lines box 357px (content 642px), lines visible 2/3; 1366×768: lines box 325px (content 642px), lines visible 2/3; 1440×900: lines box 457px (content 642px), lines visible 3/3; 1920×1080: lines box 637px (content 642px), lines visible 3/3

Suggested fix: Use a compact one-row line layout (name · qty stepper · price) on screens under ~900px tall, or let the lines area take the space of the customer/order-type block when the order has items.

UI-02 (1 of 2) · V5, 3 Oct 2026

UI-02 (2 of 2) · V5, 3 Oct 2026

UI-05 · Homepage hero mock-up still shows blank product images and "—" values

LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/`

Re-test (V5): Partially fixed Unchanged since V4: the hero mock-up is captioned as illustrative, but still shows six blank image squares and "—" instead of prices and a sales figure.

Description: The sample register in the homepage hero still has empty squares where product photos should be, and the current order and owner overview show "—" instead of prices and a sales figure. It is labelled "Illustrative interface — not connected to a live café workspace", but the first thing a visitor sees still looks unfinished.

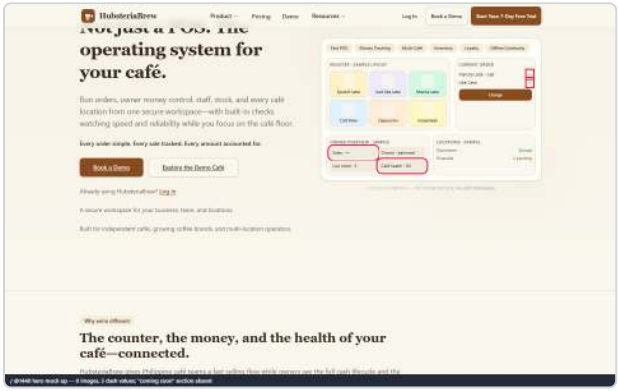

Steps to reproduce:

1. Open / at 1440×900
2. Look at the sample register on the right of the hero

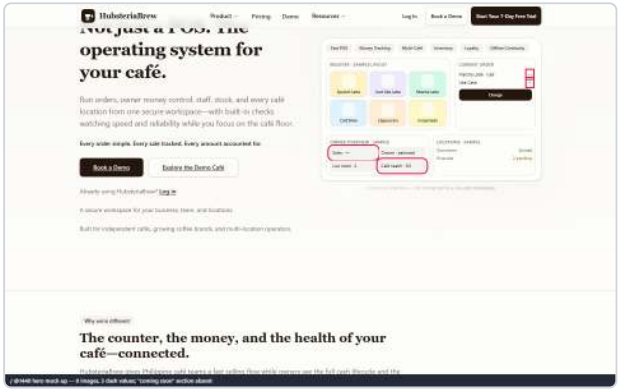

Expected: The hero mock-up shows realistic sample products, prices and totals.

Actual: mock-up: 0 images, 3 "—" values

Suggested fix: Fill the sample tiles with the demo café photos and put sample prices/sales in the mock-up.

UI-05 (1 of 2) · V4

UI-05 (2 of 2) · V5, 3 Oct 2026

UI-08 · Product pages are still very short (40–80 words) with little to explain the feature LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/loyalty`

Re-test (V5): Partially fixed Unchanged since V4: the product pages end with trial/demo buttons but are still very short (/loyalty 40 words, /inventory 68, /multi-location 65, /money-management 71).

Description: The product pages linked from the menu (Loyalty, Inventory, Money management, POS, Multi-location) have call-to-action buttons, but each is still only a heading and one or two sentences. An owner who clicks "Loyalty" learns almost nothing before being asked to start a trial. /security is the only full page and it has no CTA.

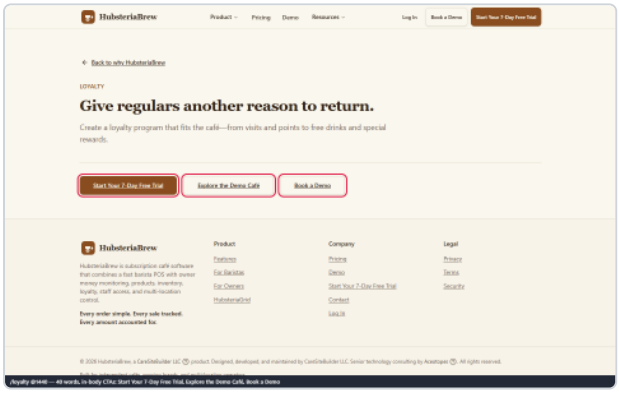

Steps to reproduce:

1. Open /loyalty at 1440×900
2. Count the words above the footer
3. Repeat on /inventory, /multi-location, /money-management, /pos, /offline-pos, /security

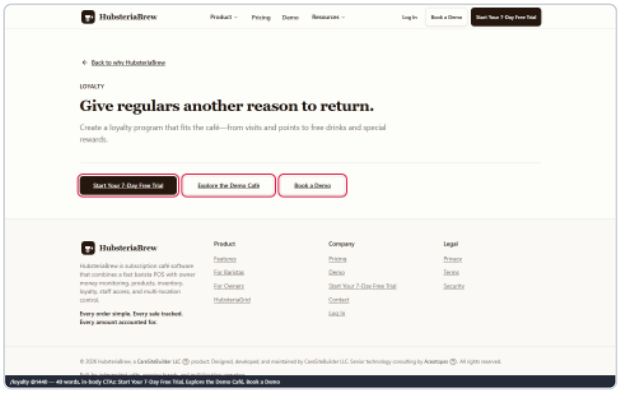

Expected: Each product page explains the feature (what it does, a screenshot, key benefits) and ends with a CTA.

Actual: /loyalty: 40 words, CTAs 3; /security: 326 words, CTAs 0; /money-management: 71 words, CTAs 3; /offline-pos: 138 words, CTAs 3; /pos: 80 words, CTAs 3; /inventory: 68 words, CTAs 3; /multi-location: 65 words, CTAs 3

Suggested fix: Add 2–3 short sections per page (what it does, a screenshot from the demo café, owner benefit) and a CTA on /security too.

UI-08 (1 of 2) · V4

UI-08 (2 of 2) · V5, 3 Oct 2026

UI-11 · On phones the Orders filters still push every order below the fold LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/orders`

Re-test (V5): Partially fixed Unchanged since V4 (slightly worse): the help card is a small "Page help" button, but the 7 stacked filters on /orders end at y=809px and the first order card starts at y=825px (795px in V4), below the 812px screen.

Description: At 375×812 the Orders screen shows the heading, the Sell/Barista buttons, the tab bar, a note and seven filters (search, payment, café, register, taken by, from, to) before the first order. The first order card starts below the bottom of the screen, so the owner sees no orders at all until they scroll.

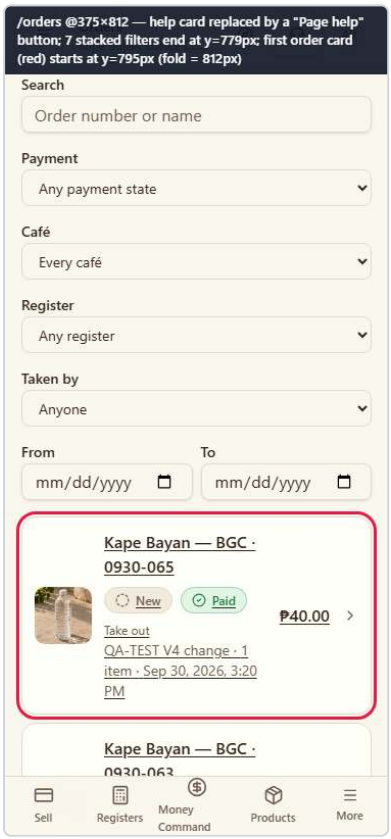

Steps to reproduce:

1. Open /orders at 375×812
2. Without scrolling, look for the first order card

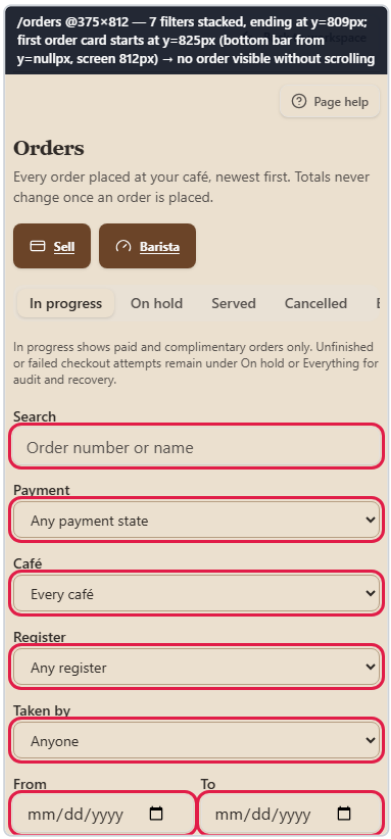

Expected: At least the first orders are visible on first load; filters collapse behind a "Filters" button on phones.

Actual: first order card top 825px (screen 812px); filters end at 809px; "Filters" toggle: false

Suggested fix: Collapse the filters into a "Filters" button/sheet on phones and show the list first.

UI-11 (1 of 2) · V4

UI-11 (2 of 2) · V5, 3 Oct 2026

UI-13 · Homepage still repeats the same blocks (tagline ×3, feature titles ×2) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/`

Re-test (V5): Partially fixed Unchanged since V4: the homepage is 13869px tall at 375px and 7484px at 1440px; the tagline still appears 3 times and the Money Command, Transaction integrity and HubsteriaGrid titles twice each.

Description: The homepage still repeats itself: the tagline "Every order simple. Every sale tracked. Every amount accounted for." appears three times, the hero headline twice, and the Money Command, Transaction integrity and HubsteriaGrid blocks are shown once as small cards and again as large cards further down.

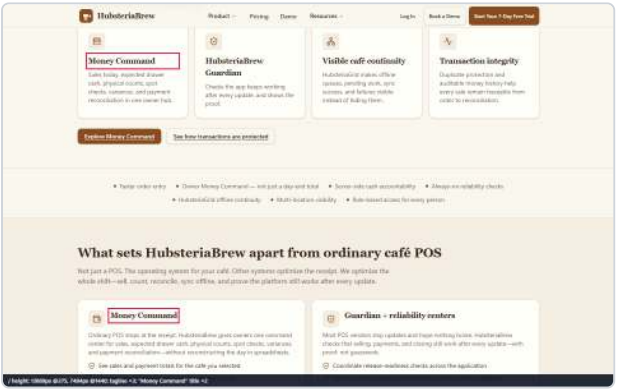

Steps to reproduce:

1. Open / at 1440×900 and 375×812
2. Scroll the whole page and note repeated headings

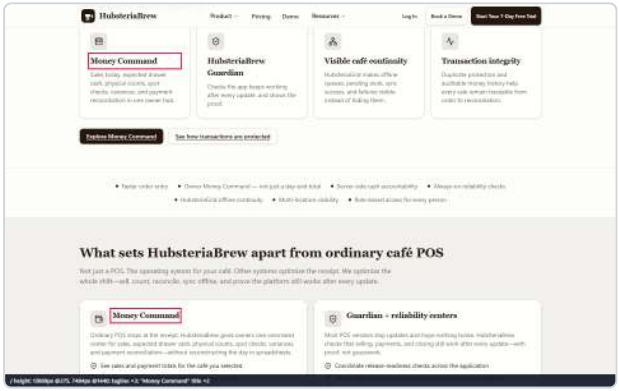

Expected: Each message and feature appears once.

Actual: {"375":{"height":13869,"tagline":3,"heroHeadline":2,"moneyCommandTitle":2,"transactionIntegrityTitle":2,"hubsteriaGridTitle":2,"sections":13},"1440":{"height":7484,"tagline":3,"heroHeadline":2,"moneyCommandTitle":2,"transactionIntegrityTitle":2,"hubsteriaGridTitle":2,"sections":13}}

Suggested fix: Merge the small feature cards and the large "What sets HubsteriaBrew apart" cards, and keep the tagline once.

UI-13 (1 of 2) · V4

UI-13 (2 of 2) · V5, 3 Oct 2026

UI-15 · Placeholder in the "Primary need" field is still slightly cut on phones LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/contact`

Re-test (V5): Partially fixed Unchanged since V4: the "Primary need" placeholder still needs 325px in a 317px field at 375px, so the trailing "..." is cut.

Description: On the Book a Demo form at 375px, the "Primary need" placeholder reads "Cash accountability, multi-location reporting...". All words fit, but the text is still 8px wider than the field, so the final ellipsis is clipped.

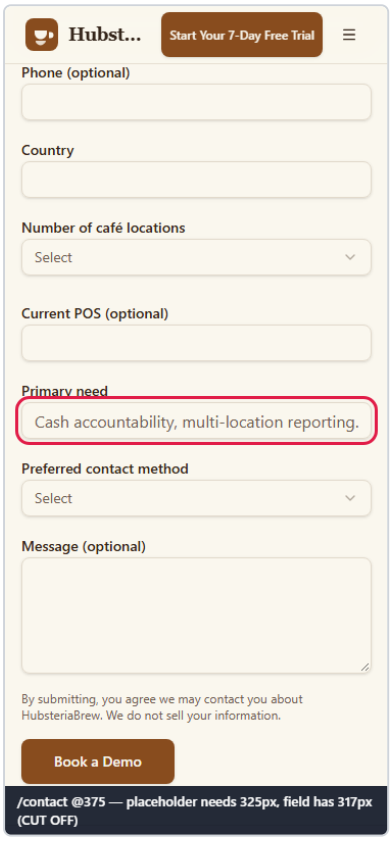

Steps to reproduce:

1. Open /contact at 375×812
2. Look at the "Primary need" field

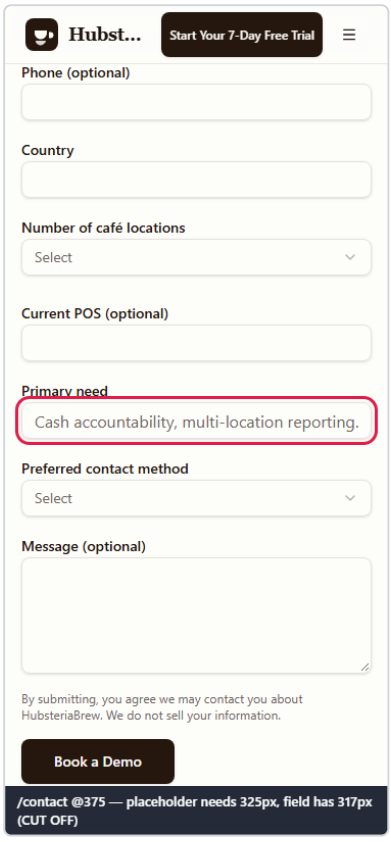

Expected: The placeholder fits the field.

Actual: needs 325px, field has 317px

Suggested fix: Shorten the placeholder (e.g. "Cash control, multi-location reports") or drop the ellipsis.

UI-15 (1 of 2) · V4

UI-15 (2 of 2) · V5, 3 Oct 2026

UI-19 · Half-transparent "Add an item" bar sits over product names and prices on phones and tablets LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): Still open Same problem in the new Sell: with an empty cart the bottom bar is now a disabled "Add an item" button at opacity 0.5, still drawn over the product grid at 375px and 768px; at 768px the prices ₱125.00, ₱140.00, ₱140.00 show through it.

Description: On phones and tablets Sell shows a fixed bottom bar (cart icon + "Add an item", later "Checkout · ₱…"). With an empty cart the button is disabled and drawn at half opacity on a transparent background, so the product tiles underneath show through: at 768px the prices of Single-Origin Batch Brew, Cafe Latte and Cappuccino sit inside the bar, and neither the bar text nor the prices read cleanly. The grid has no bottom padding for the bar.

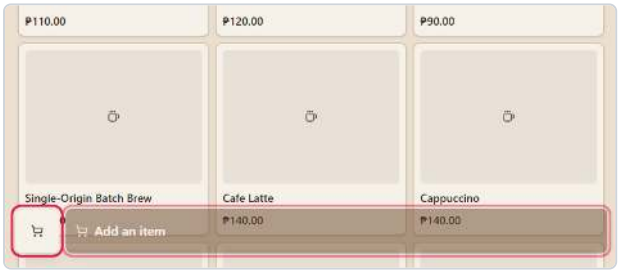

Steps to reproduce:

1. Open /sell at 375×812 and 768×1024 with an empty cart
2. Look at the bar at the bottom of the screen

Expected: The bar is hidden when the cart is empty, or is opaque and the grid has bottom padding.

Actual: {"375":{"text":"Add an item","opacity":"0.5","tilesUnderBar":2},"768":{"text":"Add an item","opacity":"0.5","tilesUnderBar":6,"prices":["₱125.00","₱140.00","₱140.00"],"gridPaddingBottom":"0px"}}

Suggested fix: Give the bar an opaque background strip and add bottom padding to the product grid equal to its height; hide or fully style the empty-cart state.

UI-19 (1 of 2) · V5, 3 Oct 2026

UI-19 (2 of 2) · V5, 3 Oct 2026

UI-23 · Order detail header still truncates the order time on phones LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/orders`

Re-test (V5): Partially fixed Unchanged since V4: order cards wrap the time, but the order detail header is still cut at 375px ("Take out · In-store · Oct 3, 2...", 243 of 257px).

Description: On a phone, the line under "Order 1003-..." in the order detail reads "Take out · In-store · Oct 3, 2026, 11:31...": the minutes/AM-PM are cut with an ellipsis. The order time is one of the main facts an owner checks when a customer disputes an order.

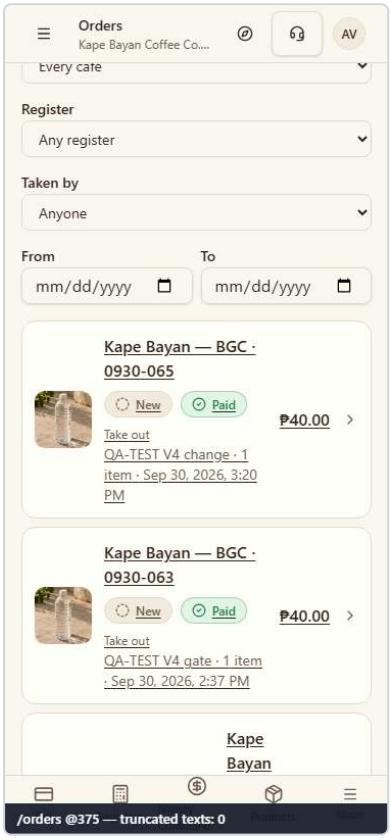

Steps to reproduce:

1. Open /orders at 375×812
2. Tap the first order
3. Read the line under "Order 1003-..."

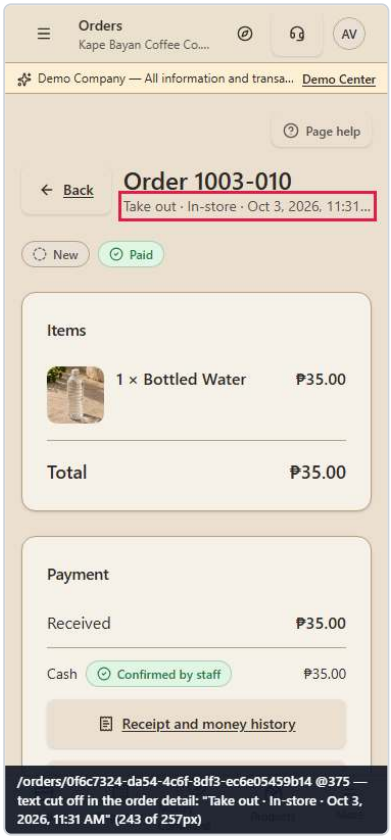

Expected: The full order time is visible (wrap to two lines on phones).

Actual: order detail: "Take out · In-store · Oct 3, 2026, 11:31 AM" 257/243px

Suggested fix: Allow the subtitle to wrap, or put the time on its own line on narrow screens.

UI-23 (1 of 2) · V4

UI-23 (2 of 2) · V5, 3 Oct 2026

UI-24 · Inconsistent action styling: plain-text "Mark sold out"/"Hide" next to bordered buttons LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/products`

Re-test (V5): Partially fixed Unchanged since V4: Products still pairs a plain-text "Mark sold out" with a bordered "Open", and Categories pairs a bordered "Edit" with a plain-text "Hide".

Description: On Products each row has "Mark sold out" as plain text next to a bordered "Open" button, and on Categories "Hide" is plain text next to a bordered "Edit". Actions of the same weight look different, and the plain-text ones are easy to miss. (The zero-count "Review" chips on Transaction integrity are still gone.)

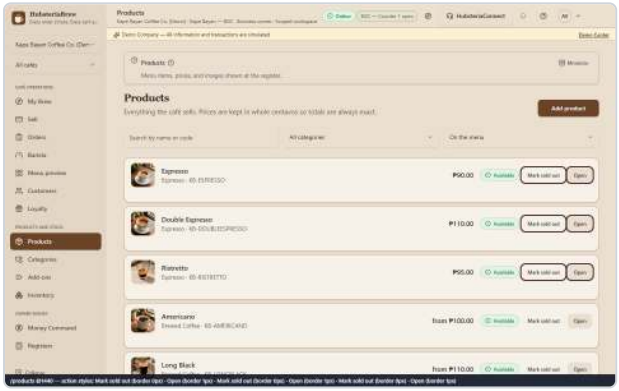

Steps to reproduce:

1. Open /products at 1440×900 and compare "Mark sold out" and "Open"
2. Open /categories and compare "Edit" and "Hide"

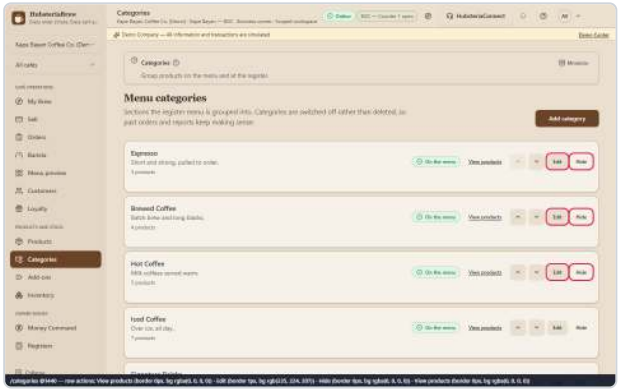

Expected: Row actions share one button style.

Actual: products: Mark sold out (border 0px), Open (border 1px); categories: Edit (border 1px), Hide (border 0px)

Suggested fix: Give "Mark sold out" and "Hide" the same outline button style as "Open"/"Edit".

UI-24 (1 of 2) · V5, 3 Oct 2026

UI-24 (2 of 2) · V5, 3 Oct 2026

UI-25 · Inconsistent naming, spelling and internal jargon in the UI LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/help`

Re-test (V5): Still open Unchanged: Help is "Help" (card) and "Help & Learning" (header, H1); Exception center is titled "Guardian Exception Center"; "centre"/"center" are still mixed (Demo centre vs Export Center); the pilot toast still says "Platform master can re-enable from T1 Master Control" and Money Command still shows "(N10)".

Description: The same screen has different names in the sidebar, help card and page title (Help / Help & Learning; Exception center / Guardian Exception Center; Transaction integrity / Transaction Integrity Center), and British "centre" and American "center" are mixed in one sidebar (Demo centre, Export Center, Exception center, Guardian Center). Internal codes still reach owners: the pilot redirect toast says "Platform master can re-enable from T1 Master Control", and Money Command says "Authoritative net sales (N10)".

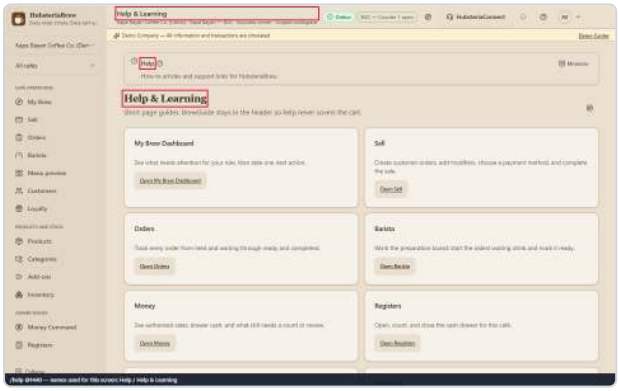

Steps to reproduce:

1. Open /help at 1440×900 and compare header, help card and H1
2. Click Exception center and Transaction integrity in the sidebar and compare names
3. Type /money-command in the address bar and read the toast

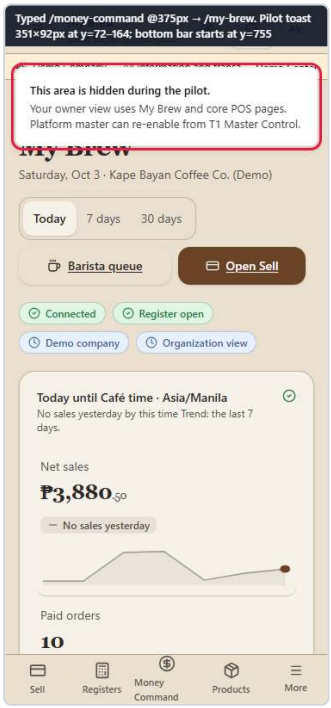

Expected: One name per screen everywhere, one spelling, no internal codes.

Actual: help names: Help / Help & Learning; centre/center on My Brew: Export Center, Exception center, Demo centre, Guardian Center; toast: "This area is hidden during the pilot. Your owner view uses My Brew and core POS pages. Platform master can re-enable from T1 Master Control."

Suggested fix: Pick one name per module and use it in the sidebar, help card, H1 and header; use one spelling; remove T1/N10 codes from owner-facing text.

UI-25 (1 of 2) · V5, 3 Oct 2026

UI-25 (2 of 2) · V5, 3 Oct 2026

UI-28 · Export Center and Transaction integrity still show developer notes: repo file path, a staff name, check codes LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/exports`

Re-test (V5): Partially fixed Better on Exception center (opened from the sidebar): most cards now have plain titles such as "Order marked served without payment", though one still reads "pipeline unpaid". Export Center is unchanged (Supabase, "docs/HUBSTERIABREW_RECOVERY_RUNBOOK.md", a staff member's first name, "use CSV for pilot backups"), and Transaction integrity still titles its checks "pipeline_unpaid" / "served_unpaid".

Description: Export Center's "Backup and recovery" card still says backups are "operated in Supabase" and that operators should follow "docs/HUBSTERIABREW_RECOVERY_RUNBOOK.md" for a named staff member's checklist, and the export hint says "use CSV for pilot backups". Transaction integrity lists every check under its internal code (pipeline_unpaid, served_unpaid). Exception center now uses plain titles for most cards, but "pipeline unpaid" remains.

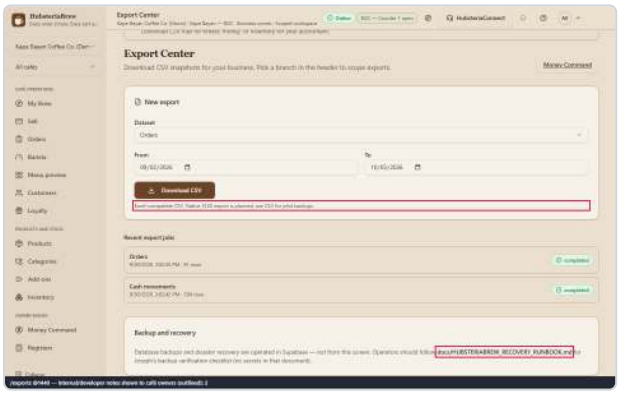

Steps to reproduce:

1. Open /exports at 1440×900 and scroll to "Backup and recovery"
2. From a workspace page, click "Transaction integrity" in the sidebar (a typed URL redirects to My Brew during the pilot) and read the check titles
3. Click "Exception center" in the sidebar and read the card titles

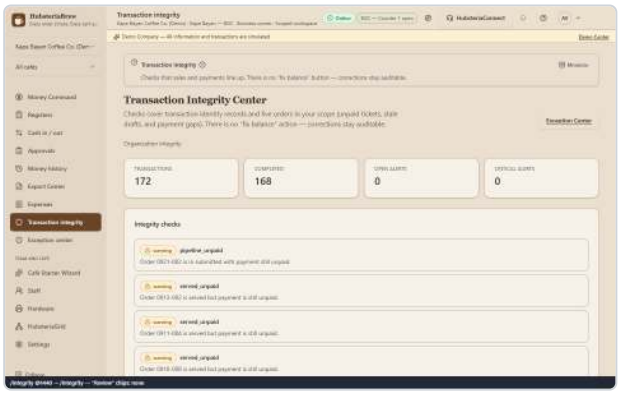

Expected: Owner screens use plain language; no file paths, staff names or internal codes.

Actual: exports: Excel-compatible CSV. Native XLSX export is planned; use CSV for pilot backups. | docs/HUBSTERIABREW_RECOVERY_RUNBOOK.md; integrity: pipeline_unpaid, served_unpaid card titles; exceptions: "pipeline unpaid", "Order marked served without payment"

Suggested fix: Replace the backup note with an owner-facing sentence ("We back up your data daily; contact support to restore"), and give every check a plain title.

UI-28 (1 of 2) · V5, 3 Oct 2026

UI-28 (2 of 2) · V5, 3 Oct 2026

UI-29 · Plans and Café Starter Wizard still show the generic "This page" help card

LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/plans`

Re-test (V5): Partially fixed Unchanged since V4: /plans and /starter still show the generic "This page · Use the sidebar to move around..." help card, and Pricing Setup and Payment Setup still share one generic "Administration" card.

Description: The help card at the top of Plans and of the Café Starter Wizard still says only "This page — Use the sidebar to move around. BrewGuide in the header can walk you through tasks on this screen." instead of explaining the screen. Pricing Setup and Payment Setup share one "Administration — Business or café settings..." card. The other screens have specific help text.

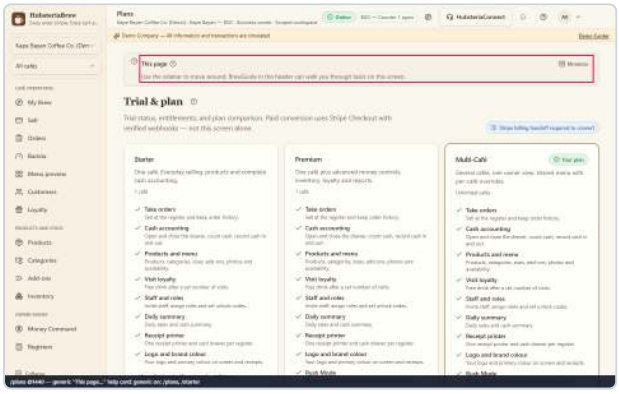

Steps to reproduce:

1. Open /plans at 1440×900 and read the help card
2. Open /starter and read the help card
3. Click Pricing Setup and Payment Setup in the sidebar and compare their help cards

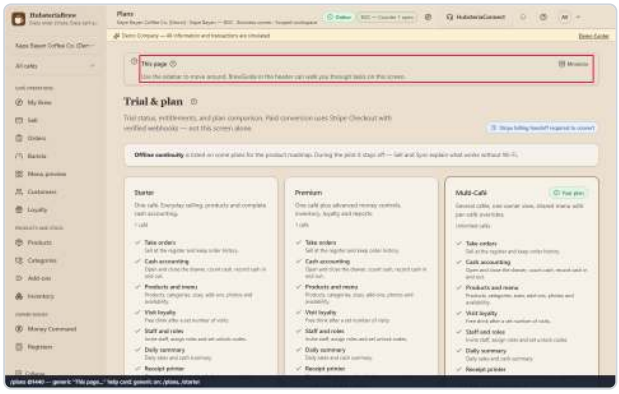

Expected: Each screen has its own short help text.

Actual: /plans: "This page Use the sidebar to move around. BrewGuide in the header can walk you through tasks on this screen."; /starter: "This page Use the sidebar to move around. BrewGuide in the header can walk you through tasks on this screen."; /admin/pricing: "Administration Business or café settings for authorized administrators in this organization."; /admin/payment-setup: "Administration Business or café settings for authorized administrators in this organization."

Suggested fix: Write a one-line help text for Plans, Café Starter Wizard, Pricing Setup and Payment Setup.

UI-29 (1 of 2) · V4

UI-29 (2 of 2) · V5, 3 Oct 2026

UI-30 · Guardian Center still shows migration IDs, "Supabase" and release-process notes to café owners LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/guardian`

Re-test (V5): Partially fixed Unchanged and one line added: Guardian Center (still reachable from the sidebar) shows "Requires migrations 20260922120000 and 20260922140000 on Supabase", "requires a live external Supabase session", "Payment Connect (PH phases 1–6)" and now also "Counter split payments (migration 20261003120000) still need operator approval...".

Description: Guardian Center opens with a plain-language health summary, but the feature cards below still list developer notes: migration numbers, "on Supabase", "live external Supabase session and terminal result", "Payment Connect (PH phases 1–6)", "Responsive checks have not passed" and "Capture viewport and telemetry evidence before promoting to Operational". A new card note names a further migration.

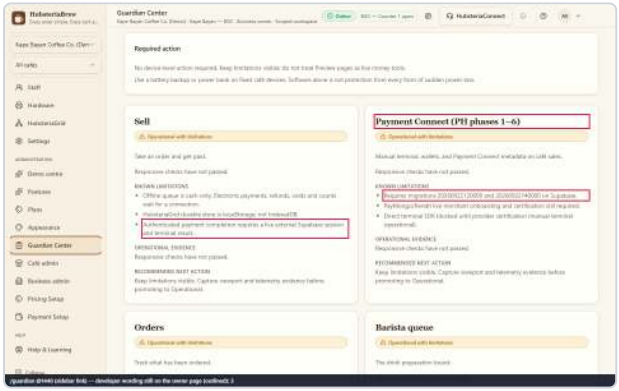

Steps to reproduce:

1. From a workspace page, click "Guardian Center" in the sidebar (a typed URL redirects to My Brew during the pilot)
2. Scroll to the Sell and Payment Connect cards
3. Read "Known limitations" and "Recommended next action"

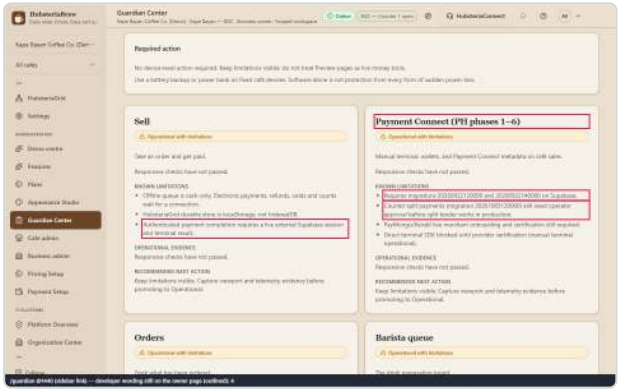

Expected: Owner-facing cards describe limits in café terms, without migration IDs or vendor names.

Actual: Authenticated payment completion requires a live external Supabase session and terminal result. | Payment Connect (PH phases 1–6) | Requires migrations 20260922120000 and 20260922140000 on Supabase. | Counter split payments (migration 20261003120000) still need operator approval before split tender works in production.

Suggested fix: Move migration/vendor/release notes to the platform console; keep one plain sentence per limitation for owners.

UI-30 (1 of 2) · V4

UI-30 (2 of 2) · V5, 3 Oct 2026

UI-31 · Payment Setup still shows webhook and hosting-provider details to café owners LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/admin/payment-setup`

Re-test (V5): Partially fixed (V4: Medium) Better: the per-provider "Provider key: cash / gcash / ..." lines and "provider_verified" are gone from Payment Setup (still reachable from the sidebar). Still shown: a "Webhooks & hosted checkout" card saying "Configure server secrets on Vercel", plus "Stripe (café)", "Cloud terminal (certified)" and "Sandbox" labels.

Description: Payment Setup no longer lists internal provider keys, but it still has a "Webhooks & hosted checkout" card that tells the owner to "Configure server secrets on Vercel (never in the browser)" and explains webhook URLs, and the provider list mentions Stripe and a Sandbox mode. A café owner cannot act on any of this.

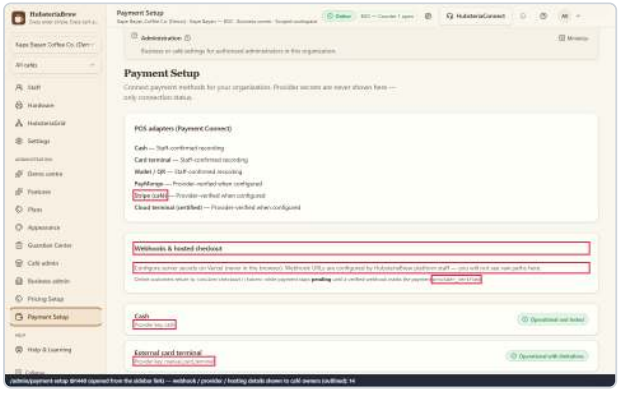

Steps to reproduce:

1. From a workspace page, click "Payment Setup" in the sidebar (a typed URL redirects to My Brew during the pilot)
2. Read the "Webhooks & hosted checkout" card
3. Scroll through the provider cards

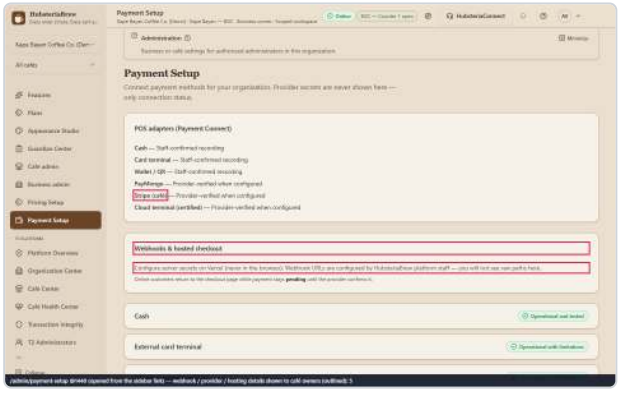

Expected: Owners see which payment methods are on and how to turn them on, without hosting or webhook details.

Actual: Stripe (café) | Webhooks & hosted checkout | Configure server secrets on Vercel (never in the browser). Webhook URLs are configured by HubsteriaBrew platform staff — you will not see raw paths here. | Stripe (café card) | Sandbox

Suggested fix: Remove the webhook/Vercel card from the owner view (keep it in the platform console) and use plain provider names.

UI-31 (1 of 2) · V4

UI-31 (2 of 2) · V5, 3 Oct 2026

UI-36 · Public header: brand name cut to "Hubst…" on phones and the trial button shown twice on tablets LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/`

Re-test (V5): Still open Unchanged: at 375px the public header cuts the brand to "Hubst…" (75 of 136px), and at 768px "Start Your 7-Day Free Trial" is shown twice side by side.

Description: On every public page at 375px the header shows the logo, "Hubst…" and the trial button; the brand name is truncated to make room. At 768px the header shows "Log In" and two identical "Start Your 7-Day Free Trial" buttons next to each other.

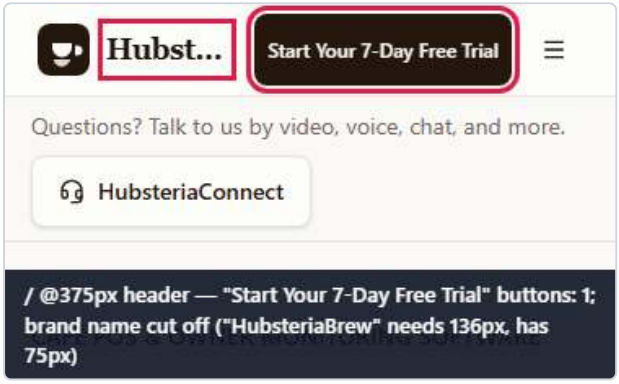

Steps to reproduce:

1. Open / at 375×812 and read the logo text
2. Open / at 768×1024 and look at the header buttons

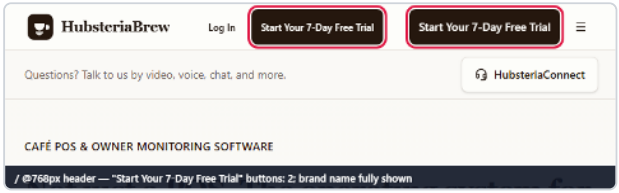

Expected: The brand name is fully visible and each CTA appears once.

Actual: 375px: trial buttons 1, brand cut; 768px: trial buttons 2, brand full; 1024px: trial buttons 1, brand full; 1440px: trial buttons 1, brand full

Suggested fix: Use the logo mark alone (or a shorter CTA "Free trial") on phones, and hide the duplicate trial button at tablet widths.

UI-36 (1 of 2) · V5, 3 Oct 2026

UI-36 (2 of 2) · V5, 3 Oct 2026

UI-37 · Organisation switcher cuts the café name mid-word ("Kape Bayan Coffee Co. (Dem") with no "…" LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): Still open Unchanged: the sidebar organisation switcher shows "Kape Bayan Coffee Co. (Dem" (189px of text in 174px), cut mid-word with no "…" and no tooltip.

Description: In the sidebar the organisation switcher clips the name "Kape Bayan Coffee Co. (Demo)" to "Kape Bayan Coffee Co. (Dem" without an ellipsis or tooltip. The "(Demo)" marker is exactly the part that tells the owner which organisation they are in.

Steps to reproduce:

1. Sign in, switch to "Kape Bayan Coffee Co. (Demo)"
2. Open /my-brew at 1440×900
3. Read the organisation switcher in the sidebar

Expected: The full name fits, or is shortened with "…" and shown in full on hover/focus.

Actual: text "Kape Bayan Coffee Co. (Demo)" 189px in 174px, text-overflow: clip, title attribute: null

Suggested fix: Add text-overflow: ellipsis and a title/tooltip, or let the switcher wrap to two lines.

UI-37: V5, 3 Oct 2026

UI-38 · Phone bottom bar: the "Money Command" label wraps to two lines and sits lower than the other tabs LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): Still open Unchanged: in the phone bottom bar on My Brew (375px) "Money Command" still wraps to two lines and sits lower than Sell, Registers, Products and More.

Description: At 375px the bottom navigation shows Sell, Registers, Money Command, Products and More. "Money Command" is the only label that wraps onto two lines, so its icon and text sit higher/lower than the others and the bar looks misaligned. (The bar still links to Money Command although the pilot hides that module on a typed URL.)

Steps to reproduce:

1. Sign in and open /my-brew at 375×812
2. Look at the bottom navigation bar

Expected: All tab labels fit on one line and line up.

Actual: Money Command label on two lines and lower than the others; Sell, Registers, Products and More on one line (see screenshot; data/ui-probe-app.json › bottomnav.375)

Suggested fix: Use a shorter label ("Money") in the bottom bar or allow two lines for every label with top alignment.

UI-38: V5, 3 Oct 2026

UI-40 · On laptops the Checkout help card pushes the complete-sale button below the screen until it is minimized LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/checkout`

Re-test (V5): New First found in this V5 audit.

Description: On /checkout at 1440×900 the help card ("Checkout · Collect payment here...") and the order header push the payment panel down; its final button ("Choose Cash Received", which becomes "Accept Exact Cash & Send Order" after a tender is picked) sits at 906–970px, below the 900px screen. At 1366×768 it is at 774–838px. Until the help card is minimized the cashier has to scroll to finish each sale. Pressing "Minimize" on the card brings the button up to 691–755px at 1366×768 and the choice is remembered for the next sale, but a new cashier will not know that. Phones and tablets pin this button to the bottom of the screen. (Related: UI-03, fixed.)

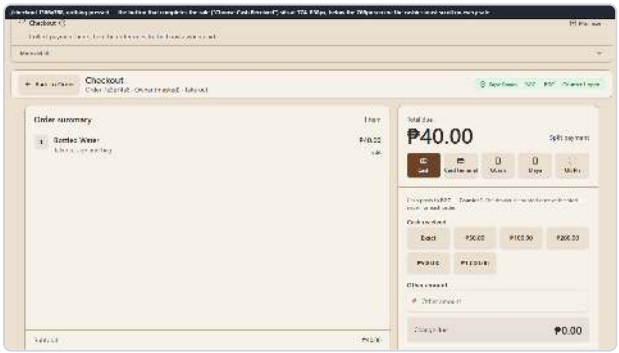

Steps to reproduce:

1. Open /sell at 1440×900 (also 1366×768) and add one item
2. Press Checkout
3. Without scrolling, look for the button that completes the sale (do not press it)
4. Press "Minimize" on the help card and look again
5. Go back to Sell and Clear the order

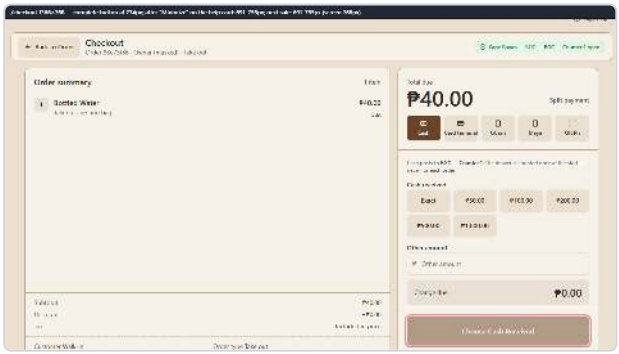

Expected: The complete-sale button is visible without scrolling at common laptop sizes (pinned to the bottom of the payment panel, as on phones).

Actual: 1440×900: "Choose Cash Received" at 906–970px, viewport 900px, page 1031px; 1366×768: "Choose Cash Received" at 774–838px, viewport 768px, page 899px; 1366×768 after Minimize: 691–755px, next sale: 691–755px

Suggested fix: Make the payment panel's action button sticky at the bottom of the viewport on all sizes, and collapse the help card on Checkout by default.

UI-40 (1 of 2) · V5, 3 Oct 2026

UI-40 (2 of 2) · V5, 3 Oct 2026

UI-41 · Phone and tablet order sheet hides Hold, Discount and Clear under the Pay-with footer LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): New First found in this V5 audit.

Description: On phones and tablets the order opens as a full-screen "This order" sheet. Its Pay with / total / Checkout footer is fixed, and Hold, Discount and Clear sit below the order lines, under that footer. With three items they are completely hidden (only "Add order note" peeks out at 768px) and at 375px the third order line is hidden too; the cashier has to discover that the middle of the sheet scrolls. On laptops these buttons are always visible.

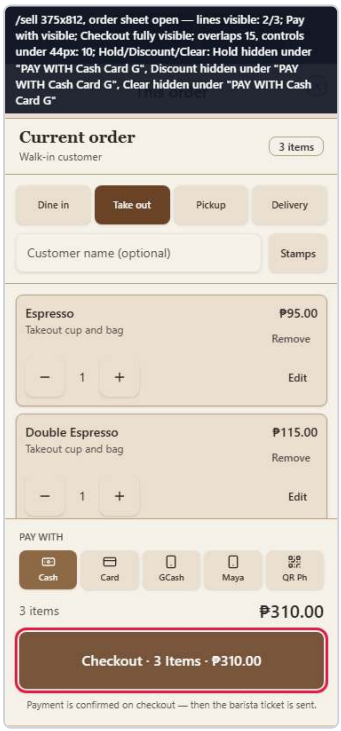

Steps to reproduce:

1. Open /sell at 375×812 (also 768×1024)
2. Add Espresso, Double Espresso and Ristretto
3. Tap the cart button to open the order sheet
4. Look for Hold, Discount and Clear without scrolling
5. Clear the order afterwards

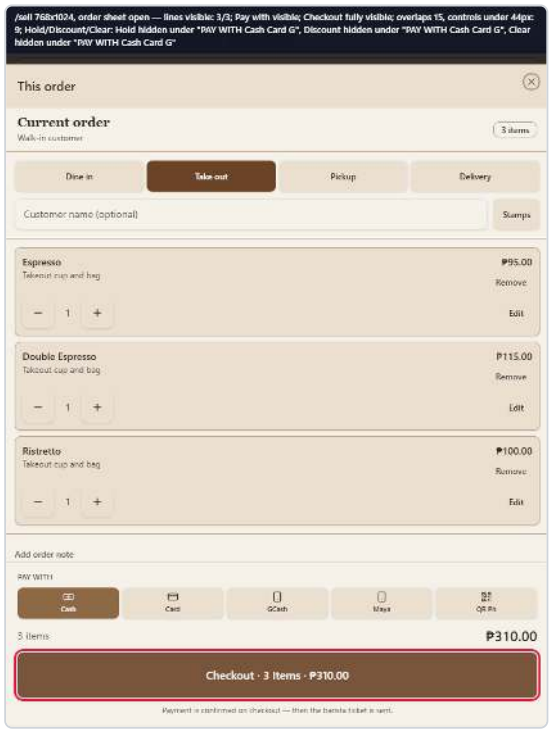

Expected: Hold, Discount and Clear are visible in the sheet (e.g. next to the order header or in the footer).

Actual: 375px sheet: lines visible 2/3; Hold hidden under "PAY WITH Cash Card G", Discount hidden under "PAY WITH Cash Card G", Clear hidden under "PAY WITH Cash Card G"; after scrolling the sheet: Add order note reachable, Hold reachable, Discount reachable, Clear reachable

Suggested fix: Move Hold / Discount / Clear into the sheet header or the fixed footer, or add bottom padding so they are not covered and show a scroll hint.

UI-41 (1 of 2) · V5, 3 Oct 2026

UI-41 (2 of 2) · V5, 3 Oct 2026

UI-42 · Small tap targets on the new Sell order sheet and Checkout (16px close button, 21px "Edit") LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): New First found in this V5 audit.

Description: The phone order sheet's close "×" is 16×16px and each line's "Remove" is 60×28px; on Checkout each line's "Edit" is 21×28px. These are below the 24×24px minimum (close, Edit width) and far below the 44px touch size the rest of the POS uses, on a screen used with fingers at a busy counter. (Related: A11Y-10, small touch targets elsewhere in the app.)

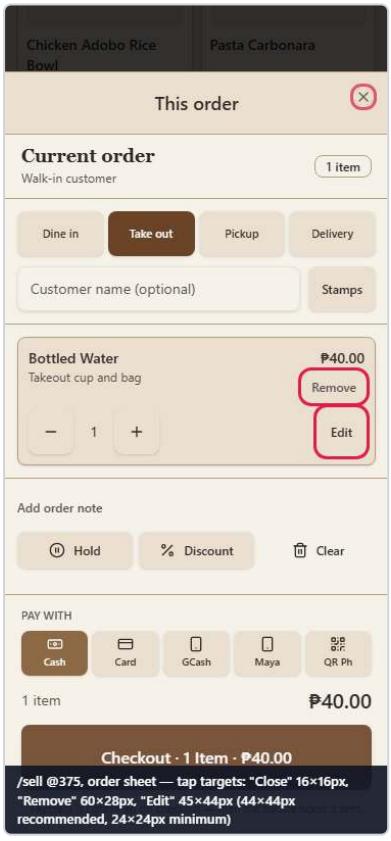

Steps to reproduce:

1. Open /sell at 375×812 and add one item
2. Tap the cart button and look at the close "×" and "Remove"
3. Press Checkout and look at the "Edit" link on the line (press nothing)
4. Go back to Sell and Clear the order

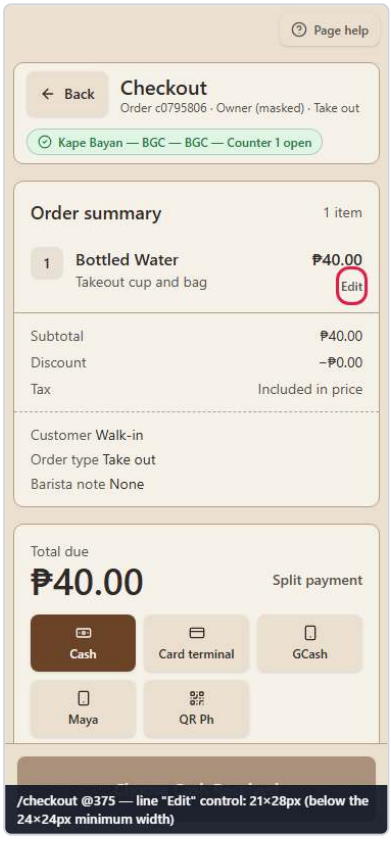

Expected: Touch targets on the POS are at least 44×44px (minimum 24×24px).

Actual: sheet: Close 16×16px, Remove 60×28px, Edit 45×44px; checkout: Back 80×44px, Edit 21×28px, Split payment 88×36px

Suggested fix: Give the close, Remove and Edit controls a 44×44px hit area (padding or min-width/min-height), keeping the visual size if needed.

UI-42 (1 of 2) · V5, 3 Oct 2026

UI-42 (2 of 2) · V5, 3 Oct 2026

UI-43 · My Brew "Cash variance" card cuts its status to "₱0.00 · ...", hiding "Balanced" LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): New First found in this V5 audit.

Description: On the redesigned My Brew, the fourth KPI card "Cash variance" holds the text "₱0.00 · Balanced" in a large serif font on one line. At 1366px and 1440px the card is too narrow, so it shows "₱0.00 · ..." and the status word (Balanced / Over / Short) is never visible. There is no tooltip. This is the owner's main cash-drawer signal on the home screen.

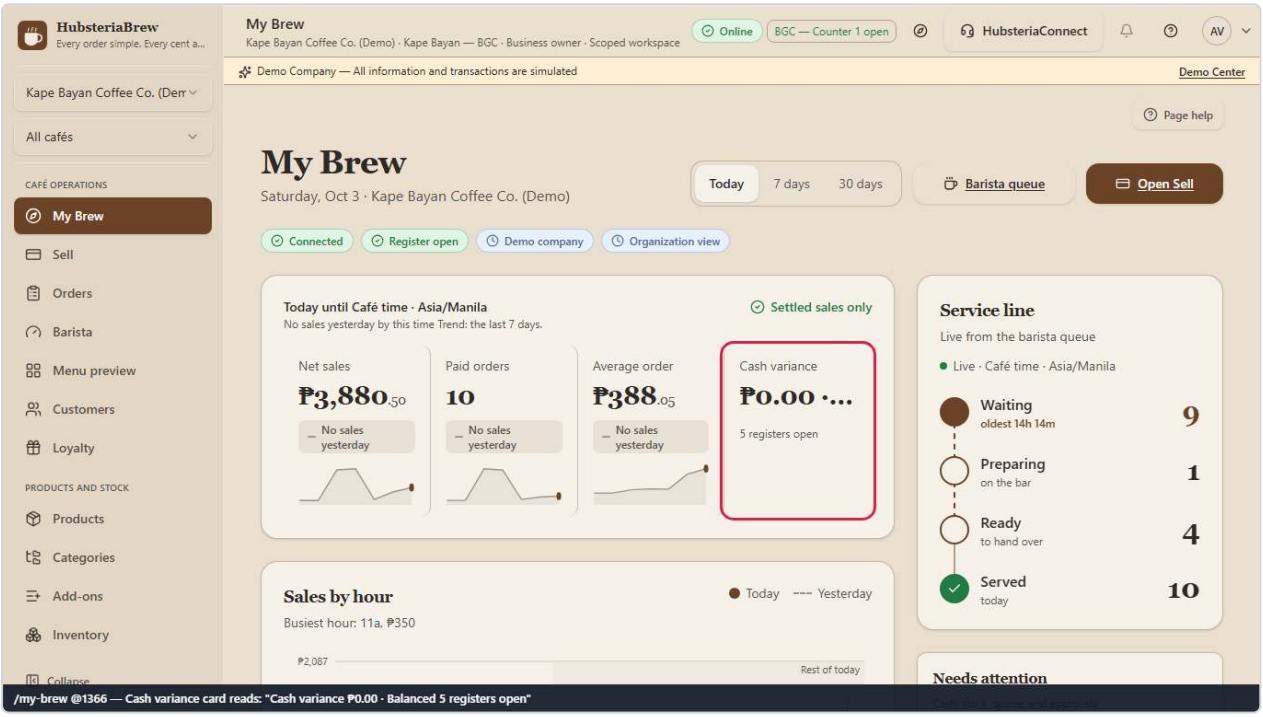

Steps to reproduce:

1. Sign in, switch to the demo café and open /my-brew at 1366×768 (also 1440×900)
2. Read the "Cash variance" card in the "Today" block

Expected: The full value and status are visible (smaller font, status on its own line, or a chip).

Actual: 1366px: card text "Cash variance ₱0.00 · Balanced 5 registers open", shown as "₱0.00 · ..."; 1440px: card text "Cash variance ₱0.00 · Balanced 5 registers open", shown as "₱0.00 · ..."

Suggested fix: Put the status ("Balanced") under the amount as a chip, like "No sales yesterday" on the other cards, and let the amount shrink to fit.

UI-43: V5, 3 Oct 2026

UI-44 · On phones the demo notice is cut to "All information and transa...", hiding the words "are simulated" LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/products`

Re-test (V5): New First found in this V5 audit.

Description: Every signed-in workspace page in the demo café shows a notice under the header: "Demo Company — All information and transactions are simulated". At 375px it is cut with an ellipsis to "Demo Company — All information and transa..." next to the "Demo Center" link, so the part that tells the user nothing here is real ("are simulated") is never visible on a phone, and there is no tooltip.

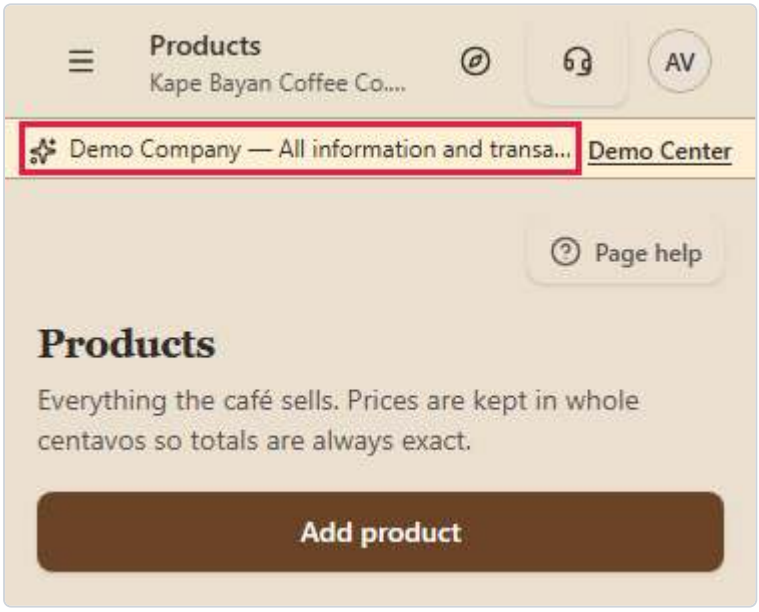

Steps to reproduce:

1. Sign in, switch to the demo café and open /products at 375×812 (any workspace page)
2. Read the notice under the header

Expected: The whole notice is readable on phones (wrap to two lines or use a shorter text such as "Demo café: nothing here is real").

Actual: notice "Demo Company — All information and transactions are simulated" shown in 271px of 368px, text-overflow: ellipsis, title: null; measured cut on 17 of 21 app pages in the 375px sweep (Sell has no notice)

Suggested fix: Let the notice wrap on narrow screens or shorten it so "simulated" always shows.

UI-44: V5, 3 Oct 2026

Console/Network

NET-09 · Sell shows no product photos: all 59 photo thumbnails (/stock/...-300.webp) answer 404 MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): New First found in this V5 audit.

Description: On the redesigned till screen every product tile now shows a grey cup placeholder instead of its photo (75 of 75 tiles). The app asks for small 300-pixel versions of the menu photos, such as /stock/menu-espresso-300.webp, but those files do not exist on the server: all 59 requests answer "404 Not Found" and log 59 console errors on every visit. The large 800-pixel versions still exist. Baristas lose the pictures that help them find items quickly. This looks like the fix for the heavy Sell photos (PERF-05) going live before the thumbnail files were uploaded.

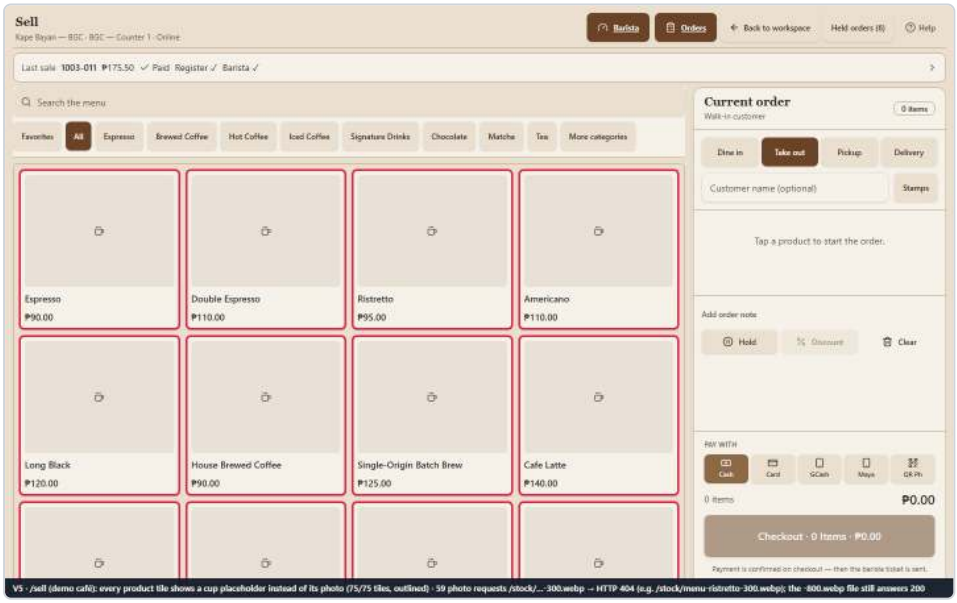

Steps to reproduce:

1. Sign in, switch to Kape Bayan Coffee Co. (Demo) on My Brew, then open /sell.
2. Look at the product tiles.
3. DevTools → Network, filter "stock": each /stock/menu-...-300.webp request returns 404.

Expected: Each tile shows its product photo, loaded as a small thumbnail that exists (HTTP 200).

Actual: 75/75 tiles show the cup placeholder; 59 × GET /stock/menu-`<item>`-300.webp → 404 (text/html), e.g. /stock/menu-espresso-300.webp → 404 while /stock/menu-espresso-800.webp → 200 (image/webp); console: 59 × "Failed to load resource: the server responded with a status of 404". V4: the same tiles loaded ...-800.webp photos (200).

Suggested fix: Upload the -300.webp thumbnails to /stock (or generate them at build time / with an image service), and fall back to the -800 file in srcset if a thumbnail is missing. Related: PERF-05, NET-07.

NET-09: V5, 3 Oct 2026

NET-02 · Consultant Summary now loads, but "Cafés in scope 1" undercounts the cafés of its 2 organizations LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/consultant`

Re-test (V5): Partially fixed The Consultant Summary loads again (no crash) and "Organizations 2" now matches the two organisations in "My organizations". But "Cafés in scope" says 1, although each of the two organisations has at least one café.

Description: The Consultant Control Center Summary no longer crashes. It shows "Organizations 2 · Cafés in scope 1 · Pending T2 invites 1". "My organizations" lists the same two organizations, HubsteriaBrew and Kape Bayan Coffee Co. (Demo), so the organisation count is now right. Each of them has its own café (HubsteriaBrew → "Main branch", Kape Bayan → "Kape Bayan — BGC"), yet the card counts only one café. Either the café count covers only the active workspace without saying so, or it misses a café.

Steps to reproduce:

1. Sign in with the consultant account, switch to Kape Bayan Coffee Co. (Demo) and open https://hubsteriabrew.com/consultant.
2. Read the Summary cards (Organizations, Cafés in scope).
3. Open the "My organizations" tab and count the organizations and their cafés.

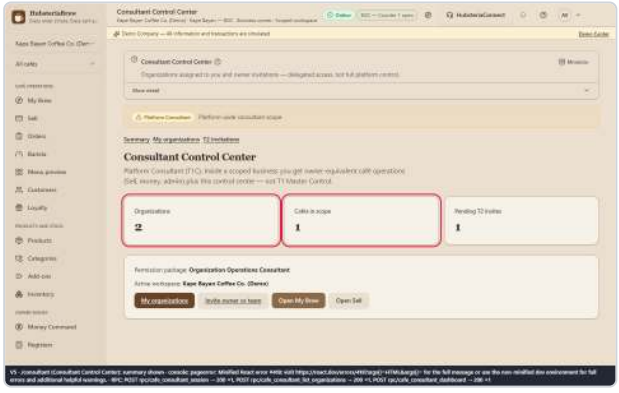

Expected: The Summary counts the same organizations and cafés as "My organizations", or says clearly what it leaves out (e.g. "cafés in the active workspace").

Actual: /consultant: no error screen; cards "Organizations 2", "Cafés in scope 1", "Pending T2 invites 1"; RPCs cafe_consultant_session 200, cafe_consultant_list_organizations 200, cafe_consultant_dashboard 200 (called again; V4 not called). Only console issue: React #418 (NET-08). /consultant/organizations: 2 organizations (HubsteriaBrew, Kape Bayan Coffee Co. (Demo)).

Suggested fix: Count cafés across all organizations in the consultant's scope (the same source as "My organizations"), or label the card "Cafés in active workspace".

NET-02 (1 of 2) · V4

NET-02 (2 of 2) · V5, 3 Oct 2026

NET-06 · Same API requests fired several times per page load (redundant fetching)

LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/registers`, `/money-history`, `/my-brew and most signed-in pages`

Re-test (V5): Still open Same in kind: /registers still runs the expected-cash calculation 5× and loads staff profiles 4× per load; My Brew now loads its orders list 4×. Fewer pages repeat a request 3+ times (4/23, V4 7/23), and profiles are still loaded at least twice on 19/23 pages.

Description: One normal load of a signed-in page still asks the database for the same data several times. On Registers the app runs the expected-cash calculation 5 times, loads staff profiles 4 times and register sessions 3 times. Money history loads profiles 4 times, Cash in / out 3 times, and My Brew now fetches its list of today's orders 4 times. Staff profiles are fetched at least twice on 19 of the 23 signed-in pages that render. Nothing fails, but the repeats add database load and slow the first screen on café tablets.

Steps to reproduce:

1. Sign in, switch to Kape Bayan Coffee Co. (Demo) and open /registers.
2. DevTools → Network (Fetch/XHR): count requests to rpc/cafe_session_expected_minor, cafe_profiles and cafe_register_sessions.
3. Repeat on /money-history and /my-brew.

Expected: Each dataset is requested once per page load (shared via a query cache).

Actual: /registers: rpc/cafe_session_expected_minor ×5, cafe_profiles ×4, cafe_register_sessions ×3 (V4 ×4); /money-history: cafe_profiles ×4; /cash-movements: cafe_profiles ×3; /my-brew: cafe_orders (today's list) ×4, cafe_profiles ×2. Pages repeating a request ≥3×: 4/23 (V4 7/23); cafe_profiles ≥2× on 19/23 (V4 23/23).

Suggested fix: Deduplicate with a shared query cache (e.g. TanStack Query with stable keys and a staleTime) or a single profile provider, and compute the expected cash once per session list.

The same API request is still sent 3–5 times in one page load (4 of 23 pages)

https://hubsteriabrew.com — signed-in pages in the demo café, one normal load each · captured 2026-10-03 (V5 re-test)

Page	Request (table and selected columns)	Times
/my-brew	GET cafe_orders?id,created_at,branch_id,register_id,created_by,status,paymen	×4
/registers	POST rpc/cafe_session_expected_minor	×5
/registers	GET cafe_profiles?user_id,full_name,email	×4
/registers	GET cafe_register_sessions?id,organization_id,branch_id,register_id,currency_code,statu	×3
/cash-movements	GET cafe_profiles?user_id,full_name,email	×3
/money-history	GET cafe_profiles?user_id,full_name,email	×4

/registers V4: rpc/cafe_session_expected_minor ×5, cafe_register_sessions ×4, cafe_profiles ×4 · V5: rpc/cafe_session_expected_minor ×5, cafe_profiles ×4, cafe_register_sessions ×3. Pages repeating a request ≥3×: V4 7/23, V5 4/23. cafe_profiles fetched at least twice on 19/23 pages. Pilot-hidden routes that redirect to /my-brew are left out.

NET-06: V5, 3 Oct 2026

NET-07 · Signed-in pages still make 46–110 requests per load (Sell 110) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): Partially fixed Better again: signed-in pages now make 46–110 requests (V4 60–133) and public pages 21–30 (V4 21–36). Sell still makes 110, and part of that drop is because its product photos now fail (new finding).

Description: Request counts fell again, on every page we compared: My Brew 78 → 65, Products 98 → 87, Registers 76 → 64, Customers 64 → 46. The till screen is still the heaviest at 110 requests (V4 133), and most signed-in screens still make 55–65 requests, well above what a café tablet on shop Wi-Fi handles comfortably. Part of Sell's drop is not a real improvement: its 59 product photos now answer 404 instead of loading (reported separately).

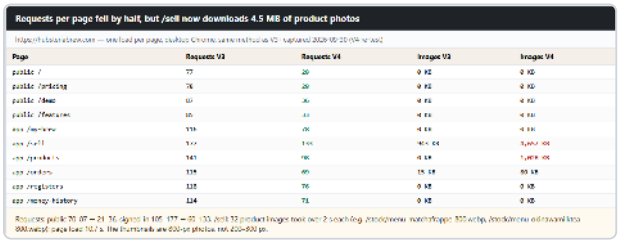

Steps to reproduce:

1. Sign in, switch to Kape Bayan Coffee Co. (Demo) and open /sell, /my-brew and /products with an empty cache.
2. DevTools → Network: read the request count at the bottom.
3. Open the public pages logged out and compare.

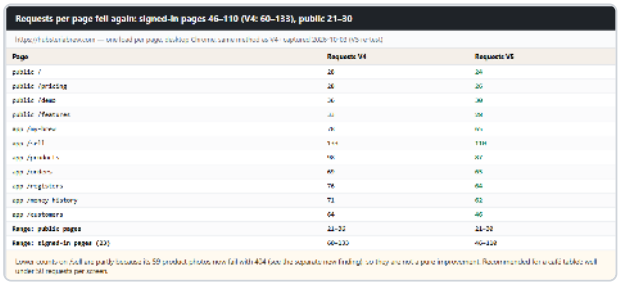

Expected: Signed-in screens make well under 50 requests on first load (bundled chunks, one request per dataset).

Actual: Public pages 21–30 requests (V4 21–36); signed-in pages 46–110 (V4 60–133), same 23 pages: /sell 110 (133), /products 87 (98), /my-brew 65 (78), /orders 65 (69), /registers 64 (76), /money-history 62 (71), /customers 46 (64).

Suggested fix: Keep merging small JS chunks and deduplicating API calls (NET-06); load Sell's product photos as small thumbnails that exist (see the new Sell photo finding).

NET-07 (1 of 2) · V4

NET-07 (2 of 2) · V5, 3 Oct 2026

NET-08 · Most signed-in pages still throw a JavaScript error on load (React error #418) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew` , `/sell` , `/orders` , `/registers and most signed-in pages`

Re-test (V5): Partially fixed The two extra /products errors ("_nonReactive") are gone, but React error #418 still fires on 21 of the 23 signed-in pages (all but Loyalty and Inventory), and also on the Consultant and new Platform pages.

Description: Opening almost any signed-in page still produces an uncaught JavaScript error, "Minified React error #418": the page the server sends does not match what the app then draws, so React throws the first version away and draws it again. Users see no message, but the first screen is drawn twice, which costs time on slower tablets and can hide real errors in monitoring. It happens on 21 of 23 signed-in pages (not Loyalty, Inventory), on the 3 Consultant pages and on all 18 new Platform pages; none of the 17 public pages has it. The two /products errors from V4 are gone.

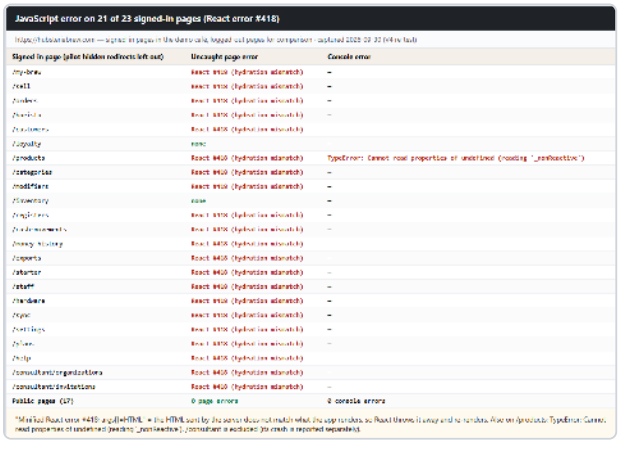

Steps to reproduce:

1. Sign in, switch to Kape Bayan Coffee Co. (Demo) and open /my-brew with DevTools → Console open.
2. Reload /sell, /orders, /registers and /products and read the Console.

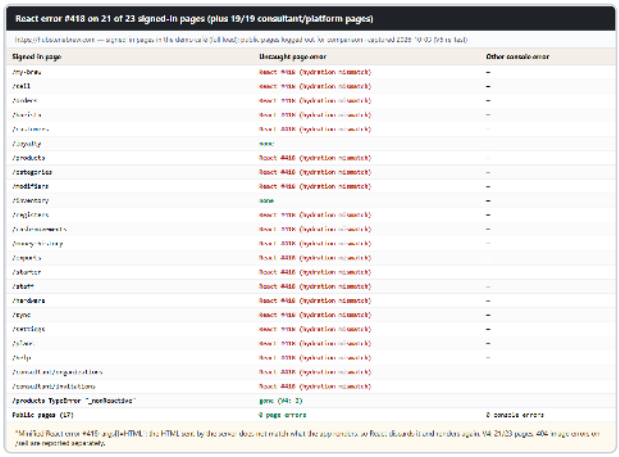

Expected: No uncaught errors on page load.

Actual: pageerror "Minified React error #418; … args[]=HTML" on 21/23 signed-in pages on a full load (not /loyalty, /inventory), 3/3 /consultant pages, 18/18 /platform pages; 0 on 17 public pages; none after sidebar clicks. /products "TypeError … _nonReactive": 0 (V4 2).

Suggested fix: Find the server/client mismatch (usually dates, times, locale formatting, or reading localStorage/window during the first render) and move that logic into an effect, or render it only on the client.

NET-08 (1 of 2) · V4

NET-08 (2 of 2) · V5, 3 Oct 2026

NET-10 · Settings counts every payment on each visit: the request takes 5–8 s and failed (HTTP 500) on 2 of 5 loads LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/settings`

Re-test (V5): New First found in this V5 audit.

Description: Each time Settings opens, the app asks the database for an exact count of all payments of the business (884 in the demo café). That small question takes 5 to 8 seconds and, on 2 of the 5 visits we recorded, the database gave up with "500 Internal Server Error" after about 8 seconds, which is typical of a query time-out. Nothing visible broke on our visits, but whatever Settings uses this count for is missing when it fails, and a query this slow on a few hundred rows means the database does far more work than needed. It will get worse as a café's sales grow.

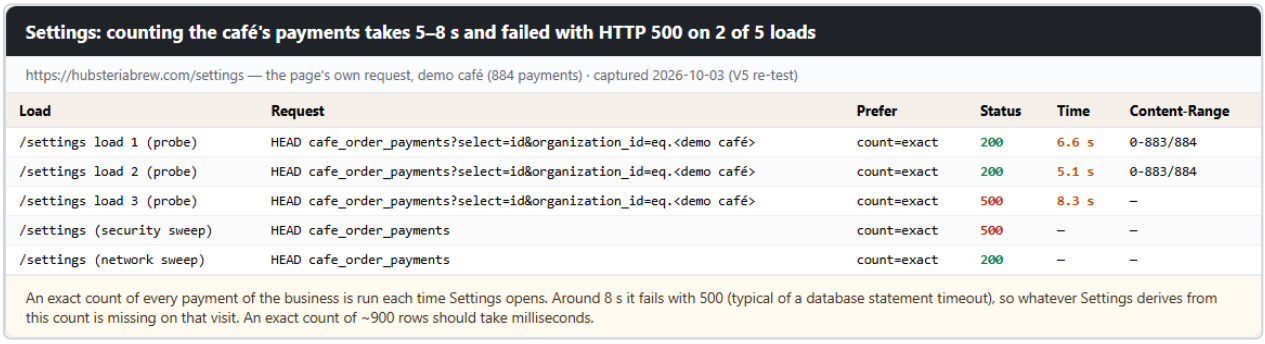

Steps to reproduce:

1. Sign in, switch to Kape Bayan Coffee Co. (Demo) and open /settings with DevTools → Network open.
2. Find the HEAD request to cafe_order_payments (Prefer: count=exact) and read its time and status.
3. Reload /settings a few times.

Expected: The count (if needed at all) answers in well under a second and never fails.

Actual: HEAD /rest/v1/cafe_order_payments?select=id&organization_id=eq.`<demo café>` with Prefer: count=exact: 200 in 6.6 s, 200 in 5.1 s, 500 in 8.3 s (probe); 500 in the security sweep; 200 in the network sweep. Content-Range 0-883/884 when it succeeds.

Suggested fix: Avoid an exact count when only "are there any payments?" is needed (use limit 1 or count=estimated), and check the row-level security policy on cafe_order_payments for per-row function calls; add an index on organization_id.

Settings: counting the café's payments takes 5–8 s and failed with HTTP 500 on 2 of 5 loads

https://hubsteriabrew.com/settings — the page's own request, demo café (884 payments) · captured 2026-10-03 (V5 re-test)

Load	Request	Prefer	Status	Time	Content-Range
/settings load 1 (probe)	HEAD cafe_order_payments?select=id&organization_id=eq.<demo café>	count=exact	200	6.6 s	0-883/884
/settings load 2 (probe)	HEAD cafe_order_payments?select=id&organization_id=eq.<demo café>	count=exact	200	5.1 s	0-883/884
/settings load 3 (probe)	HEAD cafe_order_payments?select=id&organization_id=eq.<demo café>	count=exact	500	8.3 s	–
/settings (security sweep)	HEAD cafe_order_payments	count=exact	500	–	–
/settings (network sweep)	HEAD cafe_order_payments	count=exact	200	–	–

An exact count of every payment of the business is run each time Settings opens. Around 8 s it fails with 500 (typical of a database statement timeout), so whatever Settings derives from this count is missing on that visit. An exact count of ~900 rows should take milliseconds.

NET-10: V5, 3 Oct 2026

NET-11 · Platform Transaction Integrity page never loads its checks: it asks for a database column that does not exist LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/platform/integrity`

Re-test (V5): New First found in this V5 audit.

Description: The new Platform "Transaction Integrity Center" (reached from the T1 Platform section of the sidebar) stays on "Loading checks..." with dashes in all four counters. Behind it, the page requests the Guardian checks three times and each request fails with "400 Bad Request", and the server sends the raw database message "column cafe_guardian_checks.description does not exist" back to the browser. The page was built against a database column that was never added, and exposing raw database errors was fixed elsewhere (SEC-06). See also the separate finding about who can see the Platform section.

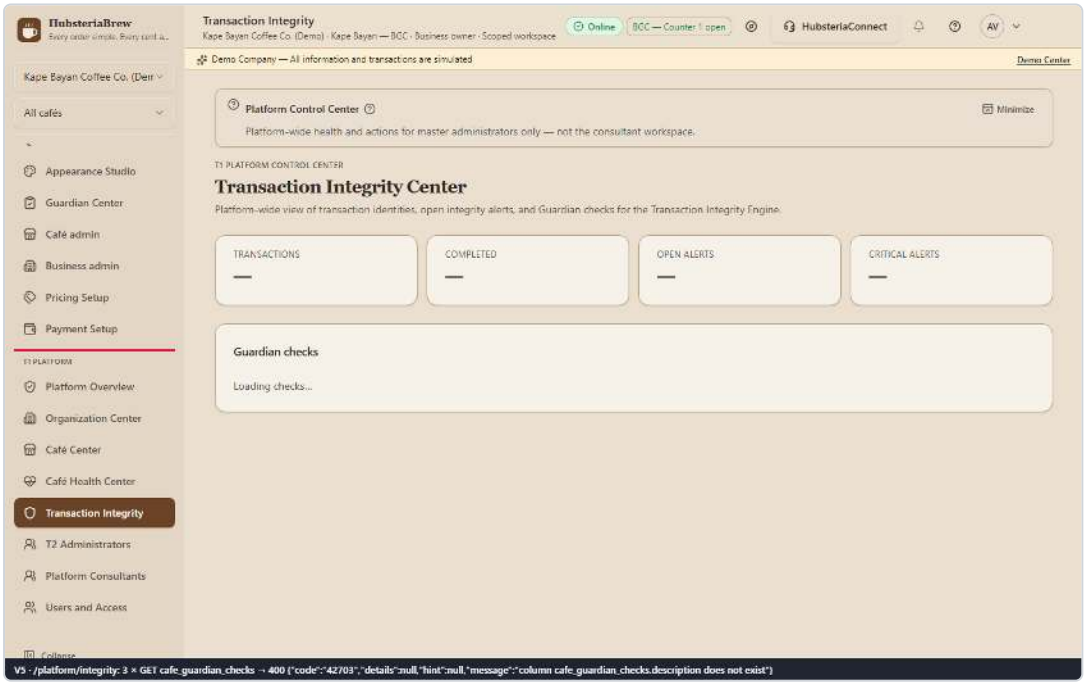

Steps to reproduce:

1. Sign in with the consultant account and click Sidebar → T1 Platform → Transaction Integrity.
2. Wait 10 seconds: "Guardian checks — Loading checks..." never changes.
3. DevTools → Network: the three cafe_guardian_checks requests return 400 with a database error.

Expected: The page loads its checks, or shows a clear "could not load" message; no raw database errors reach the browser.

Actual: 3 × GET /rest/v1/cafe_guardian_checks?select=check_key,title,description,critical,last_status,last_run_at&feature_key=eq.transaction_integrity_engine → 400 {"code":"42703","message":"column cafe_guardian_checks.description does not exist"}; page shows TRANSACTIONS —, COMPLETED —, OPEN ALERTS —, CRITICAL ALERTS —, "Loading checks..." indefinitely.

Suggested fix: Add the description column (or drop it from the select), show an error state when the query fails, and return generic error messages from the API.

NET-11: V5, 3 Oct 2026

Performance

PERF-01 · Sell screen still slow on phones (LCP 4.01 s / 4.06 s): first photo waits behind 2.0 MB of photos MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): Partially fixed Better but still slow: on phones the new full-screen Sell appears after 4.01 s / 4.06 s (two runs; V4 5.87 s / 4.62 s; target 2.5 s), score 54 / 58 (V4 43 / 51). The phone still downloads 34 photos of 800 px (2.0 MB, as in V4), so the gain does not come from smaller photos.

Description: On the phone test, the largest element on the Sell screen is still a product photo ("Ristretto"). It is marked loading="eager" and fetchpriority="high". Even so, it appears 4.01 s / 4.06 s after the screen opens (two runs; V4 5.87 s / 4.62 s, target 2.5 s). Most of that time, 3.23 s, passes before the photo even starts downloading. The photo is an 800-px file of 48 KiB, and the screen fetches 34 photos, 2.0 MB in total, at the same time (V4: 33, 1.9 MB). The test machine was slower than in V4 (speed 3007 / 3599 vs 3878), so the gain is not the machine.

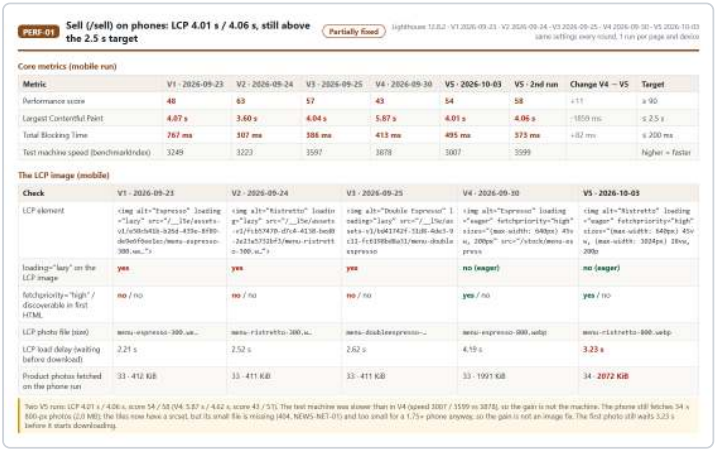

Steps to reproduce:

1. Run Lighthouse 12.8.2 on the page (Mobile and Desktop, signed in, demo café) with the same settings as V1–V4.
2. Compare the LCP element, LCP load delay, the image requests and the machine speed (benchmarkIndex) with the V1–V4 reports.

Expected: The first row of product photos loads eagerly (fetchpriority="high" on the first few), LCP ≤ 2.5 s and performance ≥ 90 on a mid-range phone.

Actual: Performance 54 / 58 (V4 43 / 51); LCP 4.01 / 4.06 s (V4 5.87 / 4.62 s). The LCP photo is eager and high-priority (/stock/menu-ristretto-800.webp) but not in the first HTML, so it waits 3.2 s. The phone still loads 34 photos, 2.0 MB (V4 33, 1.9 MB). TBT 495 / 373 ms (V4 413 ms) on a ~9% slower machine.

Suggested fix: Keep the eager first row and the new srcset, but make its small files exist and add a mid size: phones need about 330 px, so with only 300w (404) and 800w they take the 800-px file. Publish 160–400 px versions and lazy-load the rows below the fold.

PERF-01: V5, 3 Oct 2026

PERF-03 · My Brew, Products and Registers still jump (desktop CLS up to 1.13); Sell and Orders are now stable MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/my-brew`, `https://hubsteriabrew.com/sell`, `https://hubsteriabrew.com/orders`, `https://hubsteriabrew.com/products`, `https://hubsteriabrew.com/registers`

Re-test (V5): Partially fixed Better on two screens: Sell and Orders no longer jump on desktop (CLS 0.96 → 0.03, 0.95 → 0.06). My Brew, Products and Registers still jump as in V4 (desktop CLS 0.99–1.13, V4 0.96–1.10), and Registers on phones got worse (0.21 → 0.31).

Description: Sell and Orders no longer jump on desktop (Sell 0.96 → 0.03, Orders 0.95 → 0.06). My Brew, Products and Registers still move almost the whole main area (main#main-content, 0.95) after the first paint, so desktop CLS there is 0.99–1.13 (V4 0.96–1.10). On phones: My Brew 0.20 → 0.10, Sell 0.55 → 0.36, Orders 0.14 → 0.03, Products 0.10 → 0.10, Registers 0.21 → 0.31 (Sell and Registers still in the "poor" band). My Brew desktop scored 60 / 60 (V4 73): its largest element is drawn at 2.69 s / 2.64 s (V4 1.14 s) and removed again before the page settles. On a till, a cashier tapping while the layout moves can hit the wrong button.

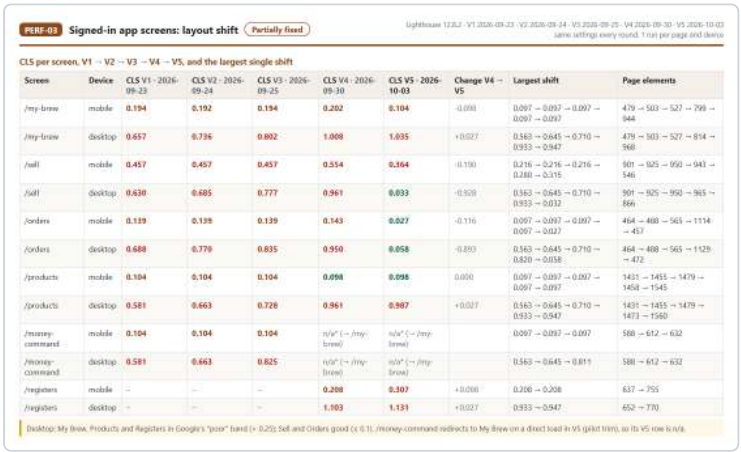

Steps to reproduce:

1. Run Lighthouse 12.8.2 on the page (Mobile and Desktop, signed in, demo café) with the same settings as V1–V4.
2. Compare "Avoid large layout shifts" (CLS) per page with the V1–V4 reports, and read the My Brew filmstrip.

Expected: CLS ≤ 0.1 on all app screens; the shell (header, demo banner, sidebar, page intro card) renders at its final size immediately.

Actual: Desktop CLS V4 → V5: My Brew 1.01 → 1.04, Products 0.96 → 0.99, Registers 1.10 → 1.13, Sell 0.96 → 0.03, Orders 0.95 → 0.06. Mobile: Registers 0.21 → 0.31, Sell 0.55 → 0.36. On My Brew the pilot organisation's short menu is replaced by the demo café's sidebar at 1.3 s (the main-content shift), then a "Finish setup" strip shrinks and disappears and the register chip changes, until about 3 s.

Suggested fix: Do on My Brew, Products and Registers what now works on Orders: draw the selected café's shell from the first paint, give the setup strip and status chips a fixed slot, and use skeletons of the final height.

PERF-03 Signed-in app screens: layout shift Partially fixed

CLS per screen, V1 → V2 → V3 → V4 → V5, and the largest single shift

Screen	Device	CLS V1 · 2026-09-23	CLS V2 · 2026-09-24	CLS V3 · 2026-09-25	CLS V4 · 2026-09-30	CLS V5 · 2026-10-03	Change V4 → V5	Largest shift	Page elements

/money-command	mobile	0.104	0.104	0.104	n/a* (→ /my-brew)	n/a* (→ /my-brew)		0.097 → 0.097 → 0.097	588 → 612 → 632
/money-command	desktop	0.581	0.663	0.825	n/a* (→ /my-brew)	n/a* (→ /my-brew)		0.563 → 0.645 → 0.811	588 → 612 → 632
/registers	mobile	–	–	–	0.208	0.307	+0.098	0.208 → 0.208	637 → 755
/registers	desktop	–	–	–	1.103	1.131	+0.027	0.933 → 0.947	652 → 770

Desktop: My Brew, Products and Registers in Google's "poor" band (> 0.25); Sell and Orders good (≤ 0.1). /money-command redirects to My Brew on a direct load in V5 (pilot trim), so its V5 row is n/a.

PERF-03: V5, 3 Oct 2026

PERF-04 · Every page loads more JavaScript than in V4, including 888 KiB of back-office code on the login page MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/`, `https://hubsteriabrew.com/pricing`, `https://hubsteriabrew.com/auth`, `https://hubsteriabrew.com/my-brew`, `https://hubsteriabrew.com/sell`, `https://hubsteriabrew.com/orders`, `https://hubsteriabrew.com/products`, `https://hubsteriabrew.com/registers`

Re-test (V5): Regressed Worse again: every page loads more JavaScript than in V4 (+9% to +14%), and the back-office code on the public pages grew (724 KiB → 888 KiB on /auth). Phone timings moved with a slower test machine, so only the byte growth is certain.

Description: The code is split into fewer, larger route files than in V4 (24 → 20 on the homepage), but pages load more code: 1418 KiB–1923 KiB per page (V4: 1243 KiB–1759 KiB); / grew most (+14%). Even the homepage and login page load back-office route files (back-office-routes 793 KiB, platform-routes 74 KiB and smaller ones). On phones the login and pricing pages appear about 0.3 s later (/pricing 2.91 s → 3.22 s, /auth 2.91 s → 3.23 s). 5 of 5 signed-in screens are still over the 200 ms blocking target (worst 659 ms). The test machine was slower (median speed 3886 → 3537), so only the byte growth is certain.

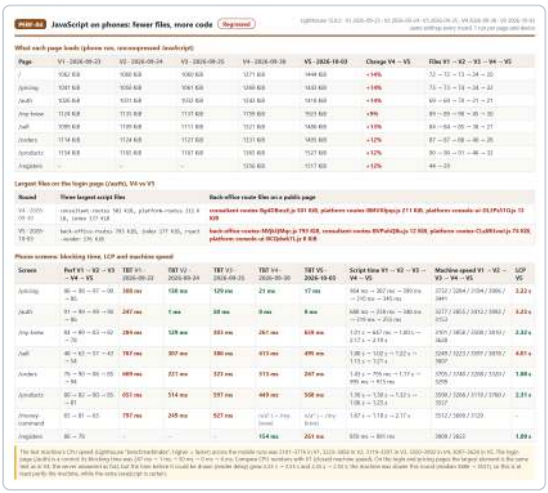

Steps to reproduce:

1. Run Lighthouse 12.8.2 on the page (Mobile and Desktop, signed in, demo café) with the same settings as V1–V4.
2. Compare the script requests and their sizes, and the machine speed, with the V1–V4 reports.

Expected: Route-level code splitting: public pages load only marketing code, each app screen loads only its own code; TBT ≤ 200 ms and LCP ≤ 2.5 s on mid-range phones.

Actual: Total JavaScript, V4 → V5 (phone run): / 1271 → 1444 KiB, /auth 1243 → 1418 KiB, /my-brew 1759 → 1923 KiB, /sell 1321 → 1486 KiB, /products 1365 → 1527 KiB, /registers 1356 → 1517 KiB. On /auth the back-office route code grew from 724 to 888 KiB; the largest file is back-office-routes (793 KiB). Phone blocking time on My Brew 261 → 659 ms.

Suggested fix: Split by audience and route: the marketing pages and /auth should load only public code; load each signed-in screen and its heavy widgets (charts, BrewGuide, onboarding) on demand, and track the total per page with a bundle analyser.

PERF-04: V5, 3 Oct 2026

PERF-05 · Product photos are still 800-px files (~1.5 MB avoidable on Sell phones); new small size is missing (404) MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/sell`, `https://hubsteriabrew.com/products`, `https://hubsteriabrew.com/orders`

Re-test (V5): Still open Not fixed: Sell's tiles now have a srcset (300w + 800w), but its 300-px files are missing, so desktop gets 404 error pages instead of photos (NET-09); that, not a fix, is why Sell desktop now weighs less. Phones still download 34 × 800-px photos (2.0 MB; ~1.5 MB avoidable, V4 ~1.7 MB), and Products and Orders are unchanged or heavier.

Description: Product tiles are at most 200 px wide (the page's own sizes attribute), but the photos are 800-px files. Sell's tiles now carry a srcset (300w and 800w versions). The 300-px files do not exist on the server: on Sell desktop all 64 photo requests answered 404 (697 KiB of error pages, NET-09), so the lower weight there is the failed requests, not a fix. A phone (1.75× screen) needs more than 300 px, so it still takes the 800-px file. On Sell phone, ~1.5 MB of 1.7 MB is avoidable (V4 ~1.7 MB). Products desktop 32 photos, 1913 KiB avoidable (V4 31, 1844 KiB); Orders desktop 17 photos, 987 KiB avoidable (V4 3, 173 KiB).

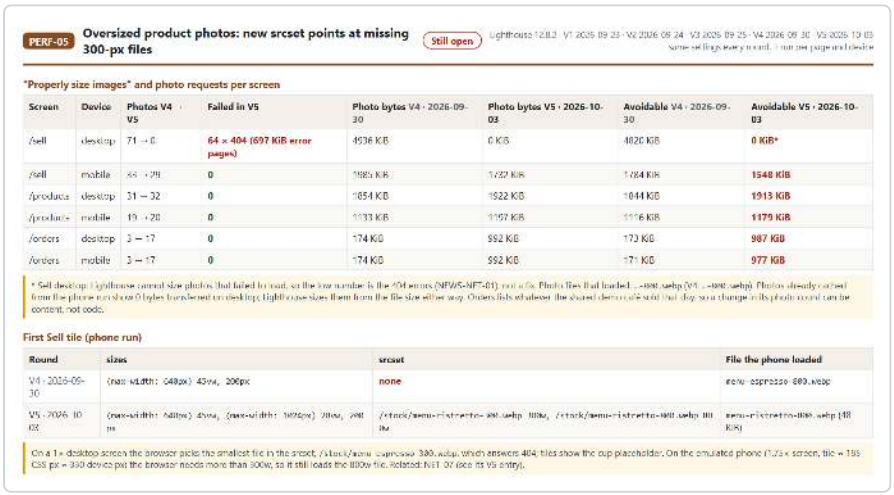

Steps to reproduce:

1. Run Lighthouse 12.8.2 on the page (Mobile and Desktop, signed in, demo café) with the same settings as V1–V4.
2. Compare "Properly size images" and the image requests (with status codes) with V4, and read the srcset of the first Sell tile.

Expected: Images sized to their displayed box (srcset/sizes for 1× and 2× screens); off-screen rows lazy, the first row eager.

Actual: Sell desktop: 0 photos loaded, 64 requests for -300.webp files answer 404. Sell phone: 34 photos, 1.7 MB, 1.5 MB avoidable (V4 1.8 MB). Products desktop: 1.9 MB avoidable (V4 1.8 MB). First Sell tile: srcset "menu-ristretto-300.webp 300w, menu-ristretto-800.webp 800w" (no srcset in V4).

Suggested fix: Make every file in the srcset exist and add tile-sized steps for 1× and 2× screens (e.g. 160/240/320/400 px), use the same srcset on Products and Orders, and keep the 800-px files for detail views. This also fixes NET-09 and most of PERF-01.

PERF-05 Oversized product photos: new srcset points at missing 300-px files Still open

"Properly size images" and photo requests per screen

PERF-05: V5, 3 Oct 2026

PERF-08 · Checkout still waits on 6 server calls in a row (~1.9 s; V4 ~2.3 s), the same chain as in V4 LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/checkout`

Re-test (V5): Partially fixed Unchanged: a cash sale still makes the same 6 server calls in a row (3 saves, 3 reads). The last one started 1.91 s after the tap (V4 2.26 s; one sample each, so ≈).

Description: On our ₱35 cash test sale (order 1003-010), after "Accept Exact Cash & Send Order" the app again made 6 server calls one after another, as in V4: save the order, read the order, read its payments 2 times, then checkout and record the sale stages. Each waits for the one before, so the last call started 1.91 s after the tap (V4 2.26 s) on a fast office connection; one sample per round, so the 349 ms difference is within normal network variation. On a slow café connection each step adds a round trip.

Steps to reproduce:

1. Sign in as the business owner (demo café) and open Sell with a register open
2. Add Bottled Water (₱35) to the cart and choose Checkout (Cash)
3. Choose Exact Amount and tap "Accept Exact Cash & Send Order" (we ran this once, as order 1003-010)
4. List the network requests from the tap until the "Payment confirmed" screen, in start order

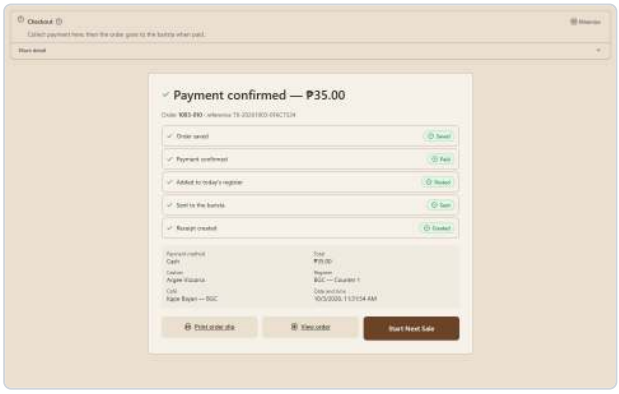

Expected: One server call (or at most two) records the sale, payment, register posting and barista ticket together, so confirmation appears in well under a second on a normal connection.

Actual: +401 ms cafe_upsert_draft_order 200; +765 ms GET cafe_orders 200; +1076 ms GET cafe_order_payments 200; +1384 ms GET cafe_order_payments 200; +1509 ms cafe_counter_checkout 200; +1912 ms cafe_record_counter_sale_stages 200. V4 (order 0930-063): +422 cafe_upsert_draft_order, +752 cafe_orders, +1078 cafe_order_payments, +1396 cafe_order_payments, +1844 cafe_counter_checkout, +2261 cafe_record_counter_sale_stages. Confirmation showed Saved / Paid / Posted / Sent / Receipt created in both rounds. Measured once per round (the gate sale).

Suggested fix: Take the payment in the same call that saves the order (or send the checkout straight after the save without re-reading the order and payments), so a cash sale needs one or two round trips; keep the stage recording server-side as it is now.

PERF-08 (1 of 2) · V5, 3 Oct 2026

PERF-08 (2 of 2) · V5, 3 Oct 2026

Accessibility

A11Y-03 · Drink options: "Required" (Milk choice, Sweetness) is marked with an attribute screen readers ignore LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): Partially fixed Better: the Size radio group is now named "Size". Still open: "Required" on Milk choice and Sweetness is set with aria-required on role="group", which ARIA does not allow (axe aria-allowed-attr, critical), so the choice is not exposed as required.

Description: In the Cafe Latte options dialog every choice now has a proper name, and the Size group is named. Milk choice and Sweetness show a "Required" badge, and the group names include "Required", but the required state itself is set with aria-required on a plain group, where it is not allowed, so assistive tech does not report the choice as required. The radio groups inside those groups (and the single "Takeout packaging" radio) have no name of their own.

Steps to reproduce:

1. Log in (demo café), open Sell and open "Cafe Latte" with the keyboard
2. Inspect Size, Milk choice and Sweetness in the accessibility tree

Expected: Each option set is a named group: single-choice sets use role="radiogroup" (aria-labelledby the "Milk choice" heading, aria-required="true") with role="radio" options; multi-select add-ons use role="group" + checkboxes.

Actual: Groups: radiogroup "Size" aria-required=false; group "Milk choice Required" aria-required=true; radiogroup "null" aria-required=false; group "Sweetness Required" aria-required=true; radiogroup "null" aria-required=false; group "Extra espresso" aria-required=null; group "Syrup flavour" aria-required=null; group "Takeout packaging" aria-required=null; radiogroup "null" aria-required=false. axe in the dialog: aria-allowed-attr(2).

Suggested fix: Move aria-required="true" from the wrapping role="group" onto the role="radiogroup" of each required choice (and give each radiogroup aria-labelledby pointing at its visible label).

A11Y-03 (1 of 2) · V4

A11Y-03 (2 of 2) · V5, 3 Oct 2026

A11Y-04 · Owner invitations: the Organization dropdown has no accessible name

LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/consultant/invitations`

Re-test (V5): Partially fixed Unchanged since V4: the Organization `<select>` on /consultant/invitations still has no label (axe select-name). The same rule also fires on three Platform pages reachable from the sidebar (T2 Administrators, Platform Consultants, Overrides).

Description: On the consultant "Invite a business owner" page, the Organization dropdown sits under a visible "Organization" text that is not linked to it, so a screen reader announces only "combo box". The same unlabelled-dropdown problem shows on the Platform pages T2 Administrators, Platform Consultants and Overrides. The sign-up, Money Command and Export Center dropdowns stay named.

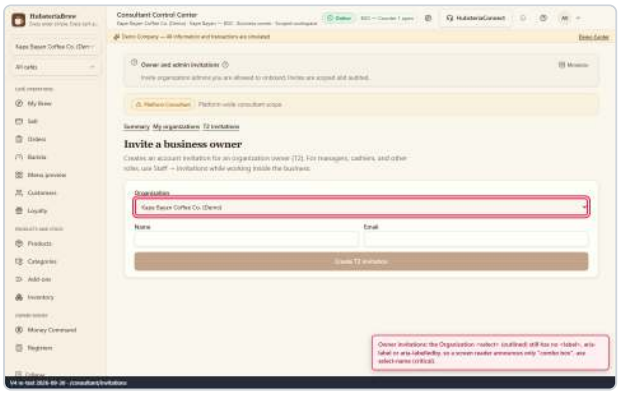

Steps to reproduce:

1. Log in and open /consultant/invitations
2. Inspect the Organization dropdown
3. Open T2 Administrators, Platform Consultants and Overrides from the sidebar and run axe

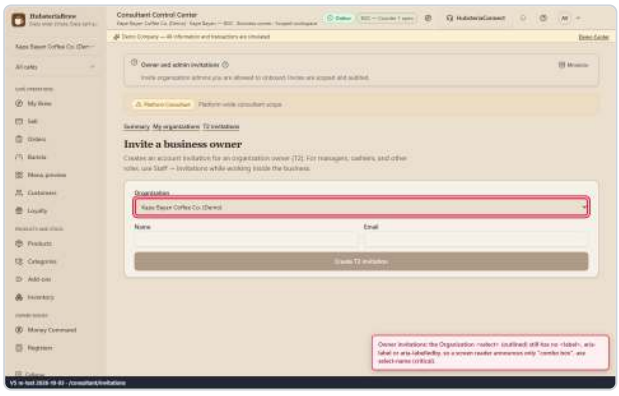

Expected: Every form control has an accessible name matching its visible label (e.g. aria-labelledby on the SelectTrigger, or `<Label htmlFor>` + id), and filter-only controls get an aria-label such as "Date range" / "Café".

Actual: /consultant/invitations `<select>`: label=null, aria-label=null. axe select-name on /platform/administrators, /platform/consultants, /platform/overrides, /consultant/invitations. Still named: /get-started Country, Timezone; Money Command Report date range, Café; /exports "Export dataset".

Suggested fix: Point the visible "Organization" `<label htmlFor>` at the `<select>` (or add aria-label); do the same for the Platform page dropdowns.

A11Y-04 (1 of 2) · V4

A11Y-04 (2 of 2) · V5, 3 Oct 2026

A11Y-08 · Heading levels skip (h1 → h3) on Sell and Money Command, and some screens still have two main headings LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/money-command`

Re-test (V5): Partially fixed Same as V4 on Money Command (h1 → h3 "More detail", axe heading-order) and on Demo centre, Guardian Center and order detail (two h1). The new Checkout screen has the same h3 "More detail" before its h1. Sell no longer skips a level only because it now has no headings at all (reported as a new finding).

Description: The collapsible "More detail" section is an h3 that comes before or directly after the page h1, skipping level 2 (Money Command, Checkout, Consultant). Demo centre, Guardian Center and the order detail page still have two h1 headings. Screen-reader users who move by headings get a confusing outline.

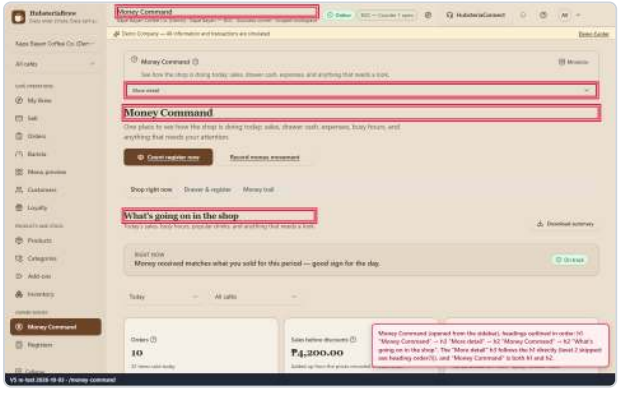

Steps to reproduce:

1. Log in; open Money Command, Demo centre and Guardian Center from the sidebar
2. Open an order detail page and the Checkout screen (from Sell with an item in the cart, not paid)
3. List the headings

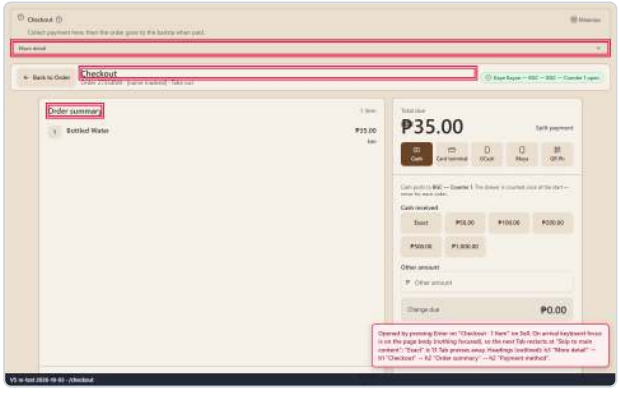

Expected: Heading levels increase by one (h1 → h2 → h3) and each heading is unique and descriptive.

Actual: Money Command: h1 "Money Command" → h3 "More detail" → h2 "Money Command" → h2 "What's going on in the shop"; /checkout: h3 "More detail" → h1 "Checkout" → h2 "Order summary" → h2 "Payment method"; /consultant: h1 "Consultant Control Center" → h3 "More detail" → h2 "Consultant Control Center"; /demo: h1 "Demo centre" → h1 "Demo centre"; /guardian: h1 "Guardian Center" → h1 "Guardian Center"; /orders/ `<id>` : h1 "Orders" → h1 "Order 1003-010"; /sell: none. axe heading-order on /money-command, /consultant.

Suggested fix: Render the accordion trigger heading as h2 (or drop heading semantics from the accordion) and remove/rename the duplicate h2 "Sell". Keep a single h1 per screen (make the header title a non-heading or the page title an h2). Keep a single h1 per screen.

A11Y-08 (1 of 2) · V5, 3 Oct 2026

A11Y-08 (2 of 2) · V5, 3 Oct 2026

A11Y-10 · Small touch targets remain (20×20 px help icons, 72×16 px "Demo Center" link) on a touch-first POS LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/money-command`

Re-test (V5): Partially fixed Unchanged on workspace pages: Money Command at 768 px still has 12 controls under 24×24 px (20×20 "About ..."/"Quick tip", 72×16 "Demo Center"). The new full-screen Sell has none (all its buttons are 32 px or larger).

Description: On tablets, the "Quick tip" (?) button and the "About ..." info buttons are 20×20 px and the "Demo Center" link is 72×16 px, below the 24×24 px minimum (44×44 recommended). Inventory's "Show items no longer used" switch is 36×20 px. The full-screen Sell screen now uses large targets throughout.

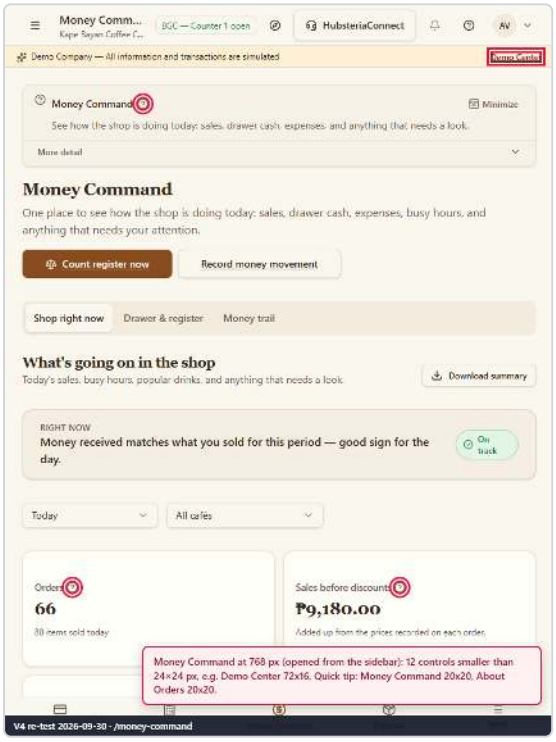

Steps to reproduce:

1. Log in, open Money Command from the sidebar and resize to 768 px
2. Measure the (?) and "About" buttons
3. Repeat on /my-brew, /sell, /orders, /registers, /inventory

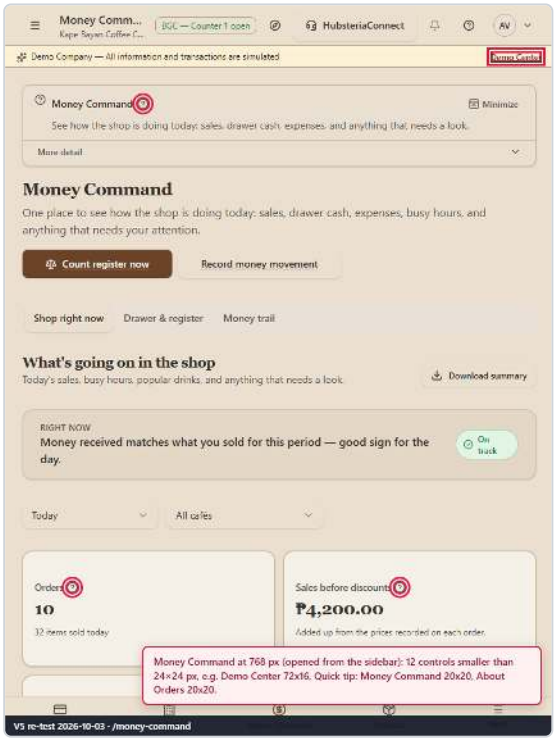

Expected: Interactive icons have at least a 24×24 px hit area (ideally 44×44 px) via padding.

Actual: Money Command (768 px): Demo Center 72×16; Quick tip: Money Command 20×20; About Orders 20×20; About Sales before discounts 20×20; About Discounts and free drink 20×20 ...; /my-brew: Demo Center 72×16. /sell: none. /orders: Quick tip: Orders 20×20. /registers: Demo Center 72×16, Quick tip: Registers 20×20. /inventory: Demo Center 72×16, Quick tip: Inventory 20×20, Show items no longer used 36×20.

Suggested fix: Increase the clickable area with padding (e.g. size-6 icon inside a size-10/11 button) without changing the visual icon size.

A11Y-10 (1 of 2) · V4

A11Y-10 (2 of 2) · V5, 3 Oct 2026

A11Y-11 · Closing the Clear order, Add customer or Request a feature dialog does not return focus to its button LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): Partially fixed Unchanged since V4: closing the "Clear this order?", "Request a feature" or "Add customer" dialog sends focus to the page content container, not back to the button that opened it. On the new Sell the next Tab lands on "Barista" at the top of the screen, far from the cart.

Description: When a keyboard user closes the "Clear this order?" dialog on Sell (Escape or confirm), focus goes to the start of the page, so the next Tab lands on the "Barista" link in the header instead of back on "Clear" in the cart. The same happens after "Request a feature" (Features) and "Add customer" (Customers). BrewGuide, the café switcher and the account menu return focus correctly.

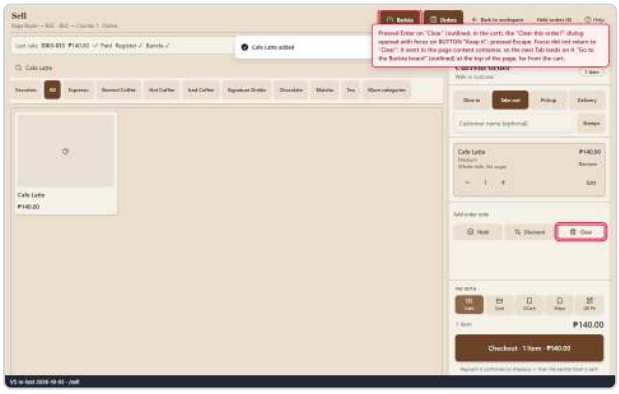

Steps to reproduce:

1. Log in (demo café), open Sell and add any item
2. Tab to "Clear" and press Enter; the dialog opens on "Keep it"
3. Press Escape, then Tab once
4. Repeat with "Request a feature" (Features, via the sidebar) and "Add customer" (Customers)

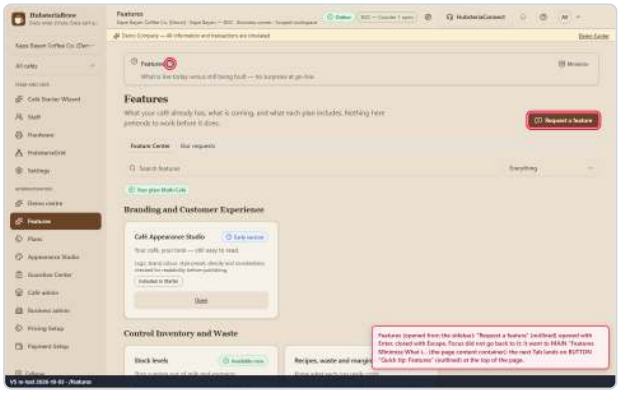

Expected: When a dialog closes, focus returns to the control that opened it (or to a logical next element, e.g. the empty cart after clearing).

Actual: Clear: open on BUTTON "Keep it"; after Escape MAIN "Sell Kape Bayan ...; next Tab A "Go to the Barista board"; after confirming: MAIN "Sell Kape Bayan .... Request a feature: after Escape MAIN "Features Minimiz..., next Tab BUTTON "Quick tip: Features". Add customer: after Escape MAIN "Back to workspac..., next Tab BUTTON "Back to workspace". Restored: BrewGuide true, café switcher true, account menu true.

Suggested fix: Let the dialog library restore focus to its trigger (Radix Dialog does this by default when the trigger is a `<DialogTrigger>`; if the dialog is opened from state, pass onCloseAutoFocus that focuses the trigger ref). After "Clear order", move focus to the menu search or the cart heading.

A11Y-11 (1 of 2) · V5, 3 Oct 2026

A11Y-11 (2 of 2) · V5, 3 Oct 2026

A11Y-14 · Appearance Studio: an invalid colour code is shown in red but not linked to the field or announced LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/appearance`

Re-test (V5): Regressed Loyalty is still fine, but the redesigned Appearance Studio (sidebar "Appearance Studio") lost the fix: an invalid hex colour shows two red messages, yet the field is not marked invalid, not linked to them, and nothing is announced.

Description: In V4 the Appearance colour field was marked invalid and its message was linked and announced. The page was rebuilt as "Appearance Studio". Typing "zzzzzz" into the "Deep (CTAs)" hex box (Colours tab) now shows "Use six-digit hex colours" and "Main colour must be a six-digit hex code", but the field has no aria-invalid, no aria-describedby, and neither message is in a live region, so a screen-reader user is not told the colour is wrong. The loyalty "Qualifying visits" error is still correct.

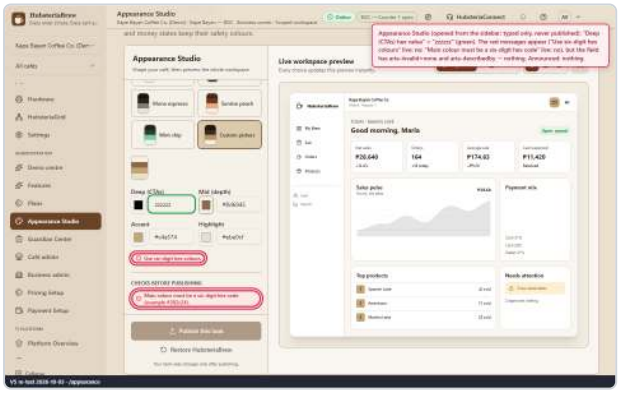

Steps to reproduce:

1. Log in (demo café), open "Appearance Studio" from the sidebar
2. Open the Colours tab
3. Type "zzzzzz" in the "Deep (CTAs)" hex box and press Tab (never publish)
4. Compare with Loyalty → "Set up a reward" → "Qualifying visits" = 1.5

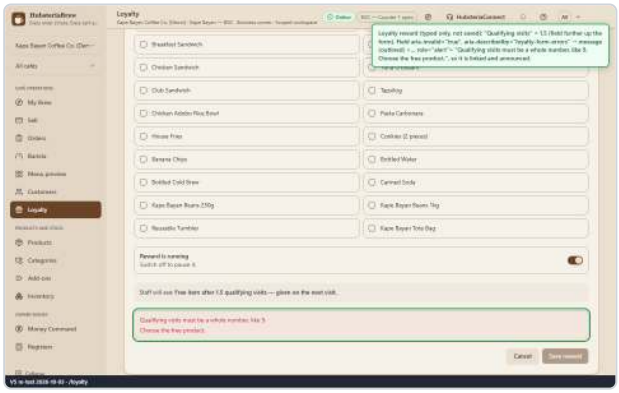

Expected: The hex field gets aria-invalid="true" and aria-describedby pointing at the message, and the message is announced (role="alert" or a live region), as on Loyalty.

Actual: Appearance "Deep (CTAs) hex value": aria-invalid=null, aria-describedby=[]; visible messages: "Use six-digit hex colours" (live: no), "Main colour must be a six-digit hex code (example #382c24)." (live: no); announced: nothing. Loyalty #visits: aria-invalid="true", aria-describedby="loyalty-form-errors" → role="alert". Write calls while typing: 0.

Suggested fix: On the hex inputs set aria-invalid="true" when the value is not a six-digit hex, point aria-describedby at the "Use six-digit hex colours" message, and render that message in a polite live region (or role="alert").

A11Y-14 (1 of 2) · V5, 3 Oct 2026

A11Y-14 (2 of 2) · V5, 3 Oct 2026

A11Y-16 · Every signed-in page now has two "banner" landmarks (the demo notice was wrapped in a second `<header>`) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): Still open Unchanged on workspace pages: the demo notice is still its own `<header>`, so pages with the sidebar expose two "banner" landmarks (axe on 64 of 72 signed-in scans). The new full-screen Sell, Orders, Barista and Customers screens have none.

Description: The yellow "Demo Company — All information and transactions are simulated" notice is wrapped in a second top-level `<header>`, next to the app header. Screen-reader users who jump between landmarks hear "banner" twice. This affects every workspace page with the sidebar; the full-screen POS screens have no banner at all.

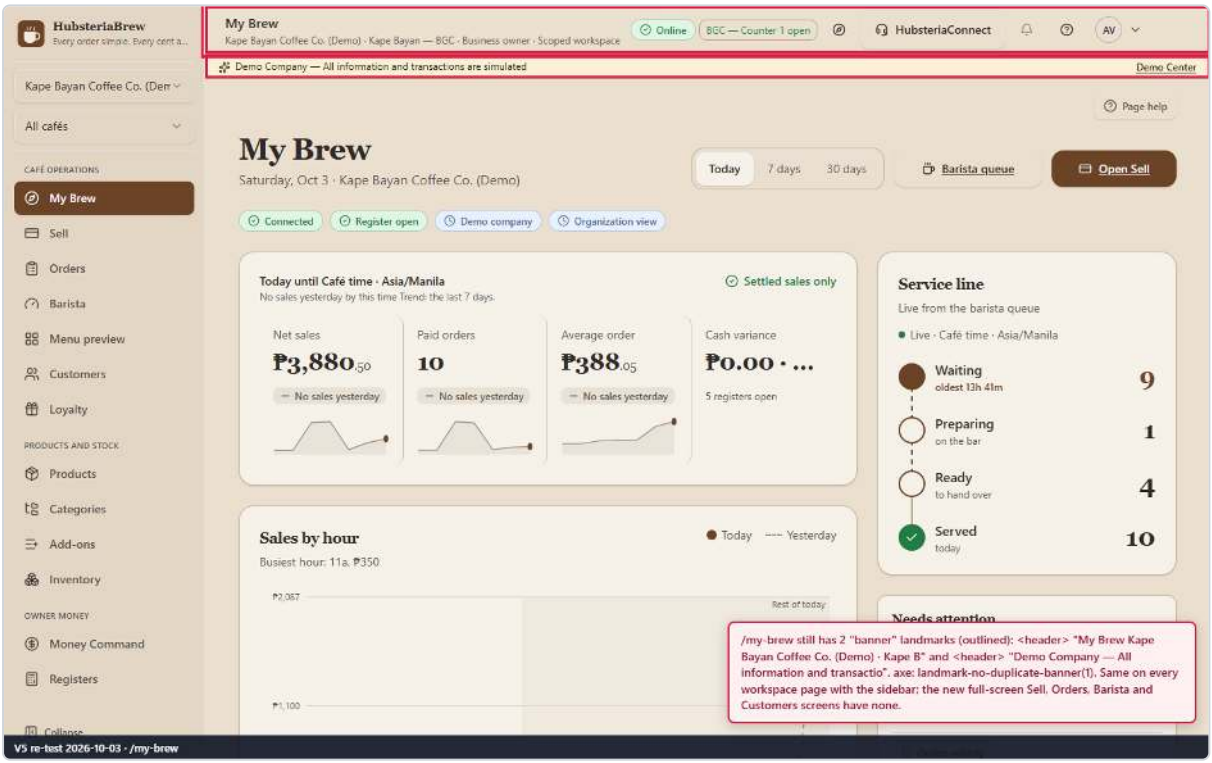

Steps to reproduce:

1. Log in and open /my-brew
2. Open the landmarks list (screen reader, or axe)

Expected: One banner landmark per page: the notice sits inside the app header (or is a role="status" / role="region" element that is not a `<header>`).

Actual: /my-brew banners: `<header>` "My Brew Kape Bayan Coffee Co. (Demo) · Kape B" + `<header>` "Demo Company — All information and transactio"; axe landmark-no-duplicate-banner(1). /sell header/banner elements: 0. axe landmark-no-duplicate-banner on 64 of 72 signed-in scans.

Suggested fix: Render the demo notice as a `<div role="status">` (it already has role="status" inside) placed inside the existing app `<header>`, or change its wrapper from `<header>` to `<div>`.

A11Y-16: V5, 3 Oct 2026

A11Y-18 · Full-screen Sell, Orders, Barista and Customers have no main heading; Sell has no headings at all LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): New First found in this V5 audit.

Description: In the V5 redesign, "Sell", "Current order" and "Pay with" are plain text, so Sell has no headings, and Orders, Barista and Customers start at h2 with no h1. Screen-reader users who move by headings cannot jump to the cart or the menu, and cannot confirm which screen they are on. axe reports page-has-heading-one on all four. Related: A11Y-08 (heading order).

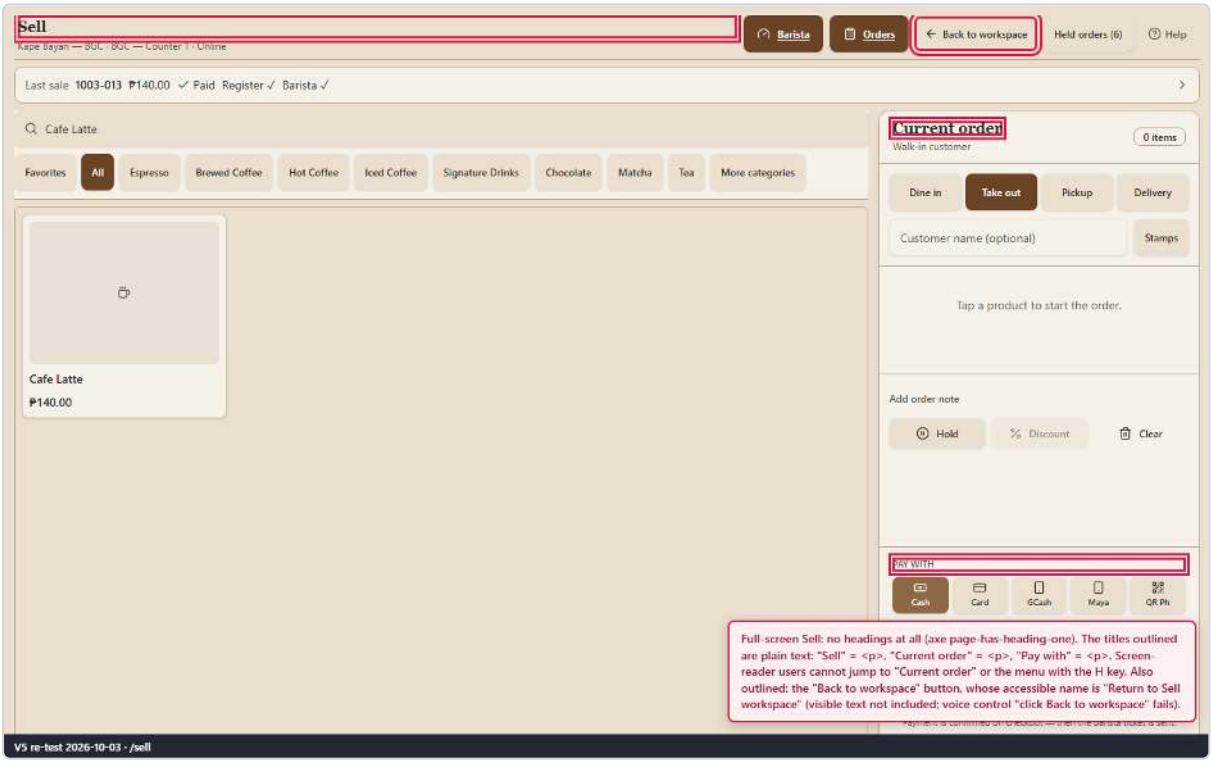

Steps to reproduce:

1. Log in (demo café), open Sell from the sidebar
2. List the headings (screen reader H key, or axe)
3. Repeat on Orders, Barista and Customers

Expected: Each screen has one h1 (e.g. "Sell") and headings for its main areas ("Menu", "Current order", "Pay with").

Actual: /sell headings: none ("Sell" = `<p>`, "Current order" = `<p>`, "Pay with" = `<p>`); /orders: h2 "Orders"; /barista: h2 "Barista board", h2 "New 9", h2 "Preparing 1", h2 "Ready 4"; /customers: h2 "Customers". axe page-has-heading-one on /sell, /orders, /barista, /customers (desktop and 375 px).

Suggested fix: Render the screen title as `<h1>` ("Sell", "Orders", "Barista board", "Customers") and use `<h2>` for "Current order" and "Pay with".

A11Y-18: V5, 3 Oct 2026

A11Y-19 · "Back to workspace" on Sell is announced as "Return to Sell workspace" (spoken name differs from the label) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): New First found in this V5 audit.

Description: The new "Back to workspace" button at the top of Sell has the hidden name "Return to Sell workspace". The visible words are not part of it, so a voice-control user who says "click Back to workspace" gets no match, and a screen-reader user hears a name that suggests staying in Sell when the button actually leaves it.

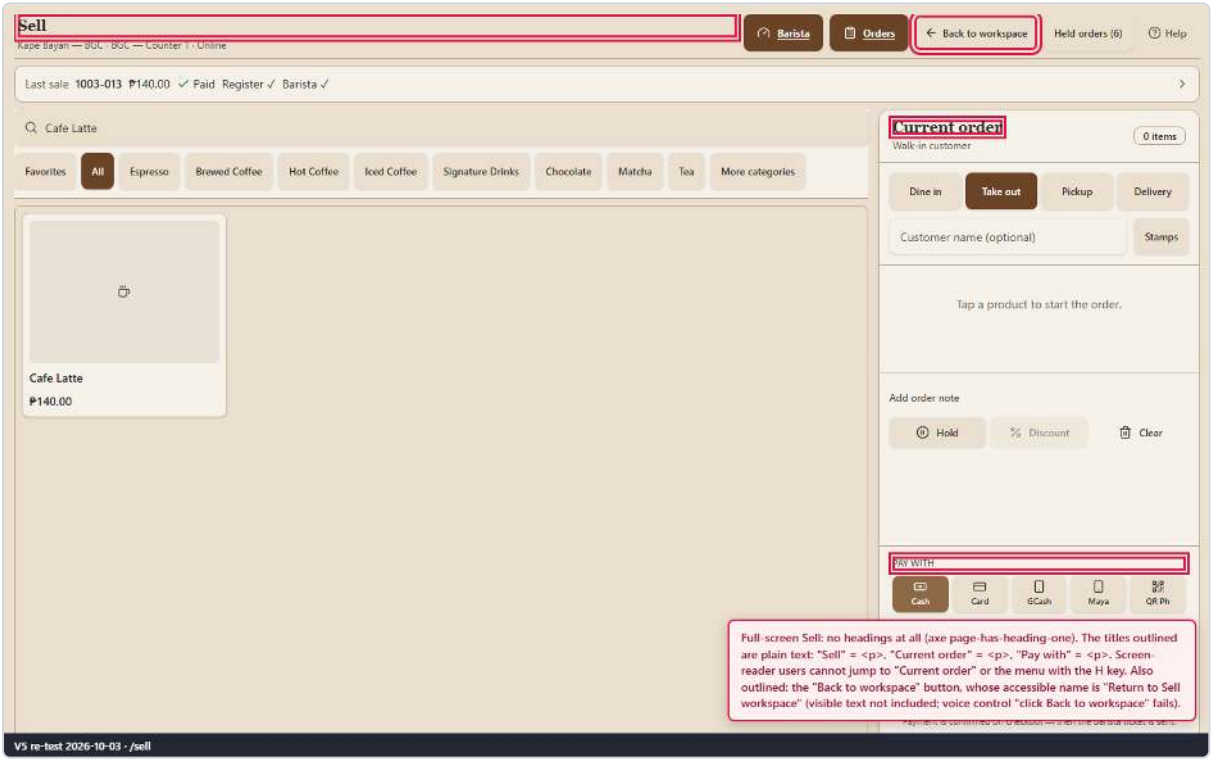

Steps to reproduce:

1. Log in (demo café) and open Sell
2. Inspect the "Back to workspace" button (or say "click Back to workspace" with voice control)

Expected: The accessible name contains the visible text, e.g. no aria-label, or aria-label="Back to workspace".

Actual: Visible "Back to workspace", aria-label "Return to Sell workspace". Tab order on Sell: 2. A "Go to the Barista board" [main] | 3. A "Go to the Orders list" [main] | 4. BUTTON "Return to Sell workspace" [main].

Suggested fix: Remove the aria-label (the visible text is enough) or change it to start with "Back to workspace".

A11Y-19: V5, 3 Oct 2026

A11Y-20 · Going from Sell to Checkout (and back) drops keyboard focus to the page; 13 Tab presses to reach "Exact" LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/checkout`

Re-test (V5): New First found in this V5 audit.

Description: Pressing Enter on "Checkout · 1 Item" opens the Checkout screen, but nothing is focused there: the next Tab restarts at "Skip to main content", and the cash "Exact" button is 13 Tab presses away. "Back to Order" returns to Sell with focus again on nothing. Screen-reader users get no cue that the screen changed. Paying itself works by keyboard: after "Exact", 7 Tabs reach "Accept Exact Cash & Send Order".

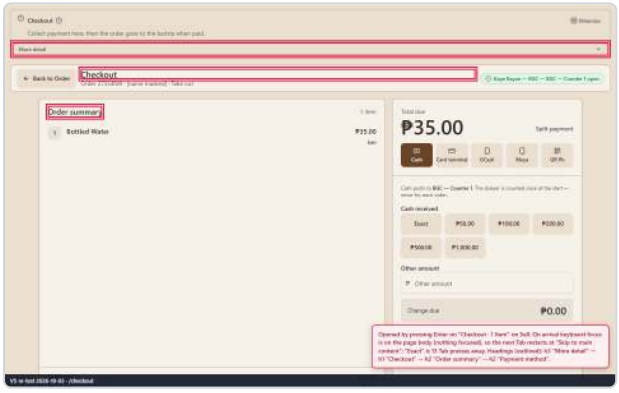

Steps to reproduce:

1. Log in (demo café), open Sell and add Bottled Water with the keyboard
2. Tab to "Checkout · 1 Item" and press Enter
3. Press Tab and count the presses to "Exact" (do not pay)
4. Press "Back to Order"

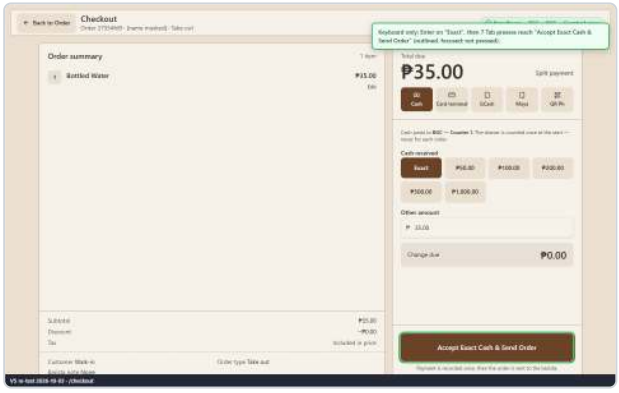

Expected: On arrival focus moves to the Checkout heading (or the payment section), and back on Sell it returns to the Checkout button.

Actual: Focus on arrival: BODY; Tabs to Cash: 8, to Exact: 13; after "Back to Order": BODY. After Enter on Exact: 7 Tabs to "Accept Exact Cash & Send Order" (not pressed).

Suggested fix: After the route change, move focus to the page h1 (tabindex="-1") or to the payment-method group; on return to Sell, focus the Checkout button.

A11Y-20 (1 of 2) · V5, 3 Oct 2026

A11Y-20 (2 of 2) · V5, 3 Oct 2026

A11Y-21 · Checkout: the chosen cash amount and the change due are not announced to screen readers LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/checkout`

Re-test (V5): New First found in this V5 audit.

Description: On Checkout, the cash-received buttons (Exact, ₱50 … ₱1,000) show the chosen amount only by colour; they expose no selected state. When a cashier picks ₱50, "Change due" updates to ₱15.00 on screen, but it is not in a live region, so nothing is announced. The payment method buttons (Cash, Card terminal…) are correct radios.

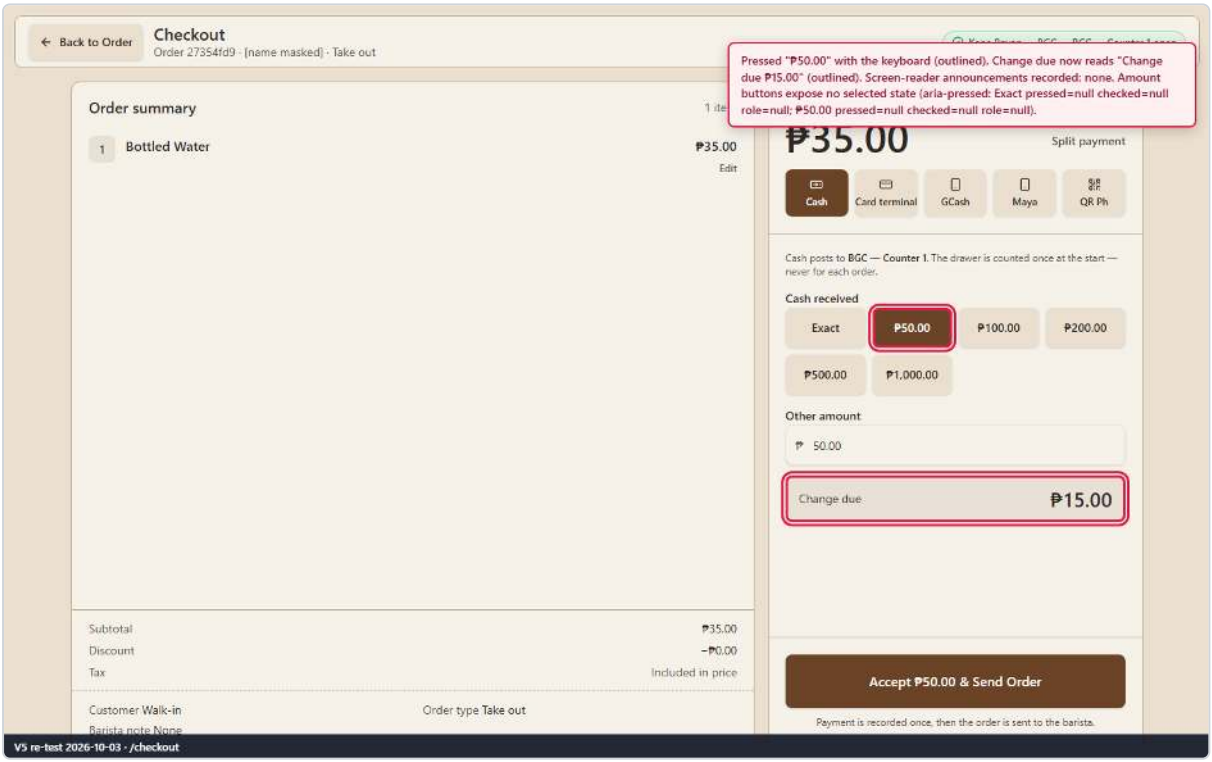

Steps to reproduce:

1. Log in (demo café), add Bottled Water on Sell and press Checkout
2. With the keyboard, press "₱50.00" (do not pay)
3. Listen / inspect "Change due" and the amount buttons

Expected: The selected amount exposes aria-pressed="true" (or the amounts are a radio group), and "Change due" is a polite live region so the new change is read out.

Actual: After ₱50: Exact pressed=null checked=null role=null; ₱50.00 pressed=null checked=null role=null; Change due "Change due ₱15.00", live region: null; announcements recorded: 0. Tender radios: Cash aria-checked=true, Card terminal aria-checked=false, GCash aria-checked=false, Maya aria-checked=false, QR Ph aria-checked=false.

Suggested fix: Add aria-pressed to the amount buttons (or role="radio" in a "Cash received" radiogroup) and wrap the Change due value in aria-live="polite".

A11Y-21: V5, 3 Oct 2026

A11Y-22 · Small status text fails contrast: header "Counter open" chip (3.98:1) and amber warning badges (4.37:1) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/money-history`

Re-test (V5): New First found in this V5 audit.

Description: The green "BGC — Counter 1 open" chip in the header of every workspace page and the amber badges such as "Over +₱4,540.00" or "1 needs review" use 12 px text below the 4.5:1 contrast minimum. They are hard to read on a bright café counter or for low-vision staff. axe flags colour contrast on most signed-in pages (V4: none).

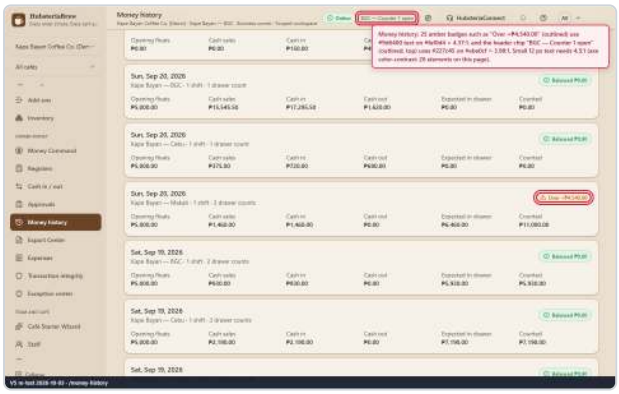

Steps to reproduce:

1. Log in and open My Brew; look at the green chip in the header
2. Open Money history (or Transaction integrity) from the sidebar and look at the amber badges

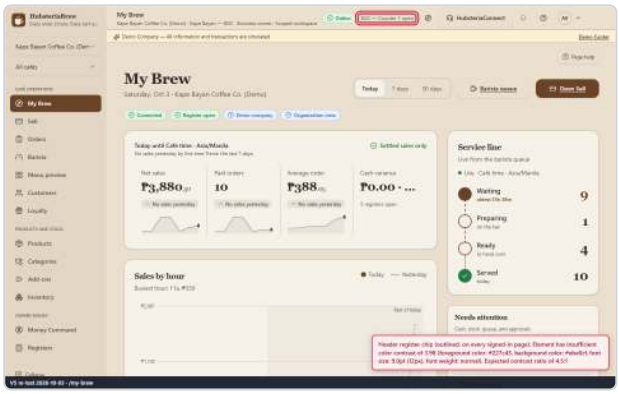

Expected: Small text has at least 4.5:1 contrast against its background.

Actual: Header chip: Element has insufficient color contrast of 3.98 (foreground color: #227c45, background color: #ebe0cf, font size: 9.0pt (12px), font weight: normal). Expected contrast ratio of 4.5:1. Money history: 25 amber badges (Over +₱4,540.00, Over +₱20.00, 1 needs review): #9d6400 on #fef0d4 = 4.37:1. axe color-contrast on 54 signed-in pages (Transaction integrity and Exception center: 121 elements each).

Suggested fix: Darken the success text (e.g. #1d6b3b) and warning text (e.g. #8a5800) tokens, or lighten their backgrounds, until both reach 4.5:1.

A11Y-22 (1 of 2) · V5, 3 Oct 2026

A11Y-22 (2 of 2) · V5, 3 Oct 2026

A11Y-23 · My Brew "Sales by hour": "Tap a column to open matching settled orders" works only with a mouse or touch LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`

Re-test (V5): New First found in this V5 audit.

Description: The redesigned My Brew chart invites the owner to tap an hour's column to open that hour's orders, but the columns cannot be reached with the keyboard and have no names, so keyboard and screen-reader users cannot use this shortcut and are not told it exists in a usable form. There is no equivalent link or button in the card.

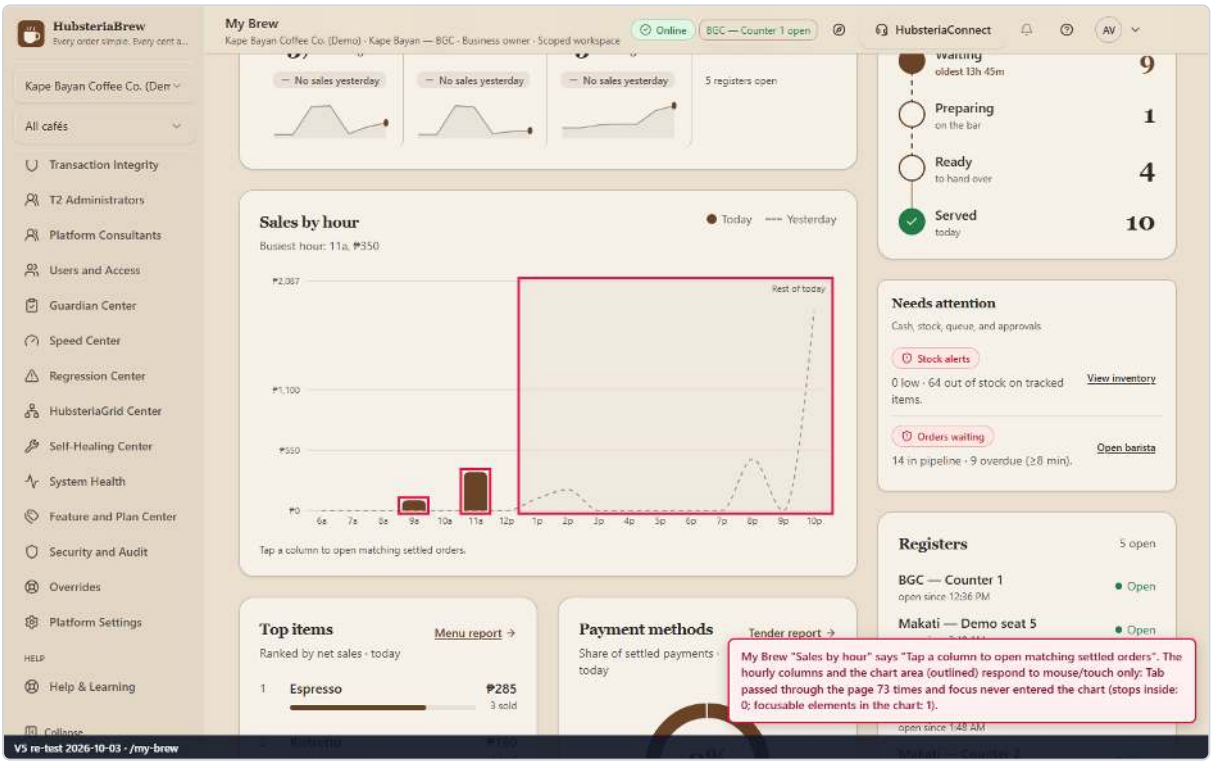

Steps to reproduce:

1. Log in and open My Brew
2. Press Tab repeatedly past the "Sales by hour" card
3. Try to open an hour's orders without a mouse

Expected: Each column is a focusable, named control (e.g. "11 AM, ₱350, open orders"), or the card offers an equivalent list of hours with links.

Actual: Tab walked 73 stops (to "Top items"): focus entered the chart 0 times; focusable elements in the chart: DIV tabindex=-1; other controls in the card: 0.

Suggested fix: Render each column as a `<button>` with an aria-label (hour, amount) or add a visually-hidden table/list of hours with links to the filtered orders.

A11Y-23: V5, 3 Oct 2026

A11Y-24 · Appearance Studio nests two extra `<main>` regions in its live preview, and the "Themes" list has no list items LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/appearance`

Re-test (V5): New First found in this V5 audit.

Description: The rebuilt Appearance Studio (sidebar "Appearance Studio") renders its live workspace preview with two more `<main>` elements inside the page's main content, so screen readers list three "main" landmarks and the skip link target is ambiguous. The theme picker is marked as a list but contains plain buttons, so it is announced as an empty list. axe reports landmark-main-is-top-level, landmark-no-duplicate-main, landmark-unique and aria-required-children.

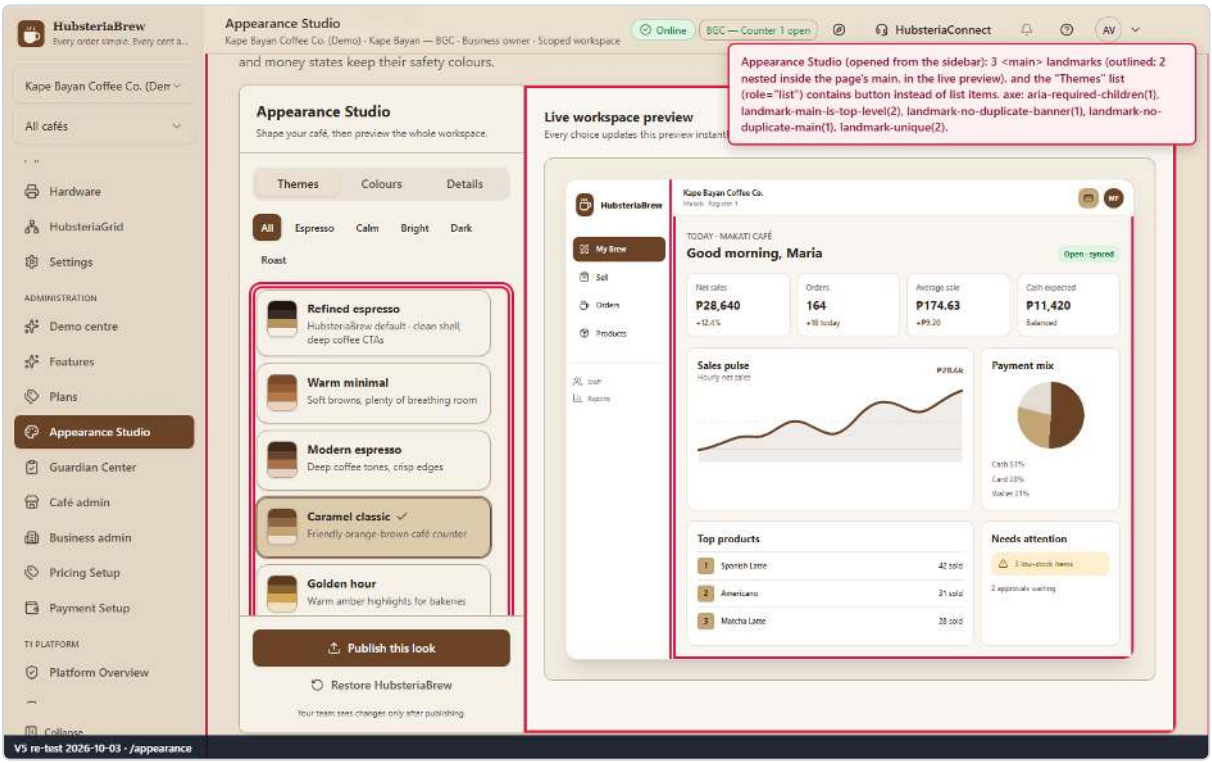

Steps to reproduce:

1. Log in (demo café), open "Appearance Studio" from the sidebar (look only, never publish)
2. Open the landmarks list or run axe

Expected: One `<main>` per page (the preview uses `<div>`s and is hidden from assistive tech or labelled as a region), and the theme list uses role="listitem" children (or no list role).

Actual: `<main>` elements: 3 (2 nested: "Live workspace preview Ev", "Kape Bayan Coffee Co. Mak"); "Themes" role="list" children: button ×18. axe: aria-required-children(1), landmark-main-is-top-level(2), landmark-no-duplicate-banner(1), landmark-no-duplicate-main(1), landmark-unique(2).

Suggested fix: Replace the `<main>` elements inside the preview with `<div>` (and mark the preview aria-hidden or role="img" with a label), and give each theme button a role="listitem" wrapper or drop role="list".

A11Y-24: V5, 3 Oct 2026

A11Y-25 · After a discount, the cart tells screen-reader users the old total (₱100.00 instead of ₱90.00) LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/sell`

Re-test (V5): New First found in this V5 audit.

Description: The Sell cart has a hidden live summary for screen readers ("2 items in the order, total ..."). After a 10% discount it still announces the total before the discount, while the screen and the Checkout button show the discounted amount. A blind or low-vision cashier would quote the customer the wrong price. Related to FUN-65 (same summary; its wording is fixed).

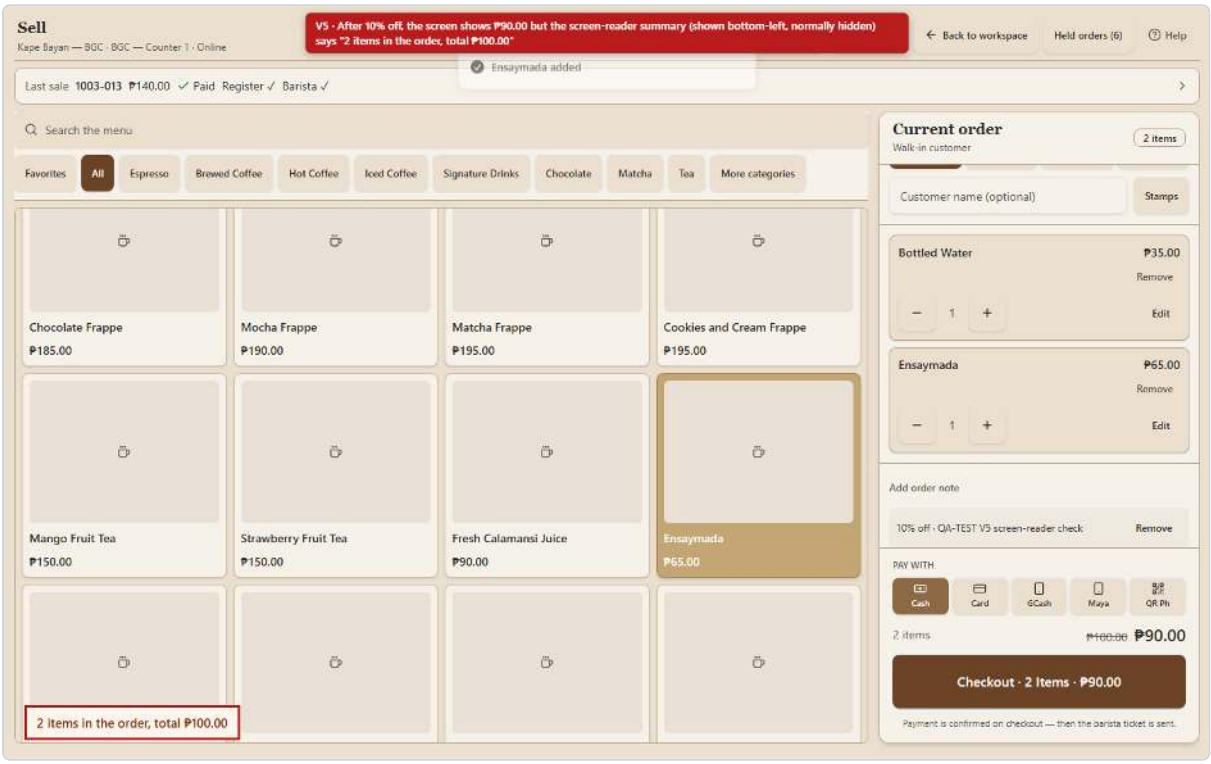

Steps to reproduce:

1. Open Sell, add Bottled Water and Ensaymada (₱100.00).
2. Discount → Percent off → 10 → reason → Apply discount.
3. Read the hidden live summary (aria-live) next to the cart.

Expected: The summary announces the amount due after discounts: "2 items in the order, total ₱90.00".

Actual: Screen: "₱100.00₱90.00", button "Checkout · 2 Items · ₱90.00"; live region `<p class="sr-only" aria-live="polite">` : "2 items in the order, total ₱100.00". Our sale 1003-011 read "2 items in the order, total ₱195.00" with the button at ₱175.50.

Suggested fix: Build the live summary from the same discounted total as the Checkout button.

A11Y-25: V5, 3 Oct 2026

SEO

SEO-03 · App routes still send no noindex in the server HTML, and 11 (e.g. /consultant, /help) are not in robots.txt LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/my-brew`, `/consultant`, `/help`, `/starter`, …

Re-test (V5): Partially fixed Unchanged since V4: every app route gets "noindex, nofollow" once JavaScript runs, but the HTML the server sends carries no noindex (only /products has it), and the same 11 routes are still not in robots.txt. The new /platform pages are covered by "Disallow: /platform".

Description: When a search engine asks for a signed-in address such as /my-brew without a session, the server answers 200 with an HTML page that has no "noindex" tag or header; the tag only appears after JavaScript runs and the visitor is sent to the sign-in page. Crawlers that don't run JavaScript can still list these addresses. robots.txt covers most of them, but 11 are still missing: the three /consultant pages, /menu-preview, /categories, /modifiers, /expenses, /integrity, /hardware, /help and /starter.

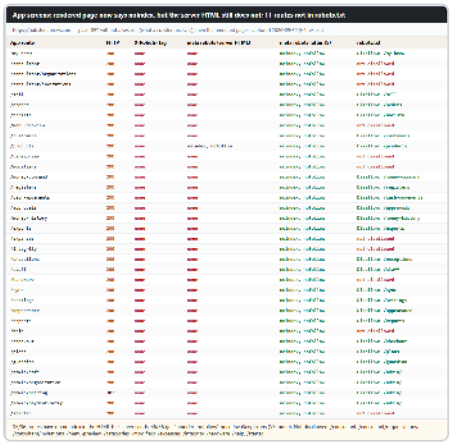

Steps to reproduce:

1. Request https://hubsteriabrew.com/my-brew without a session (curl -sI, then view source).
2. Look for X-Robots-Tag and `<meta name="robots">` in the server HTML.
3. Open the same URL in a browser and read the robots meta after the redirect to /auth.
4. Check each route against https://hubsteriabrew.com/robots.txt.

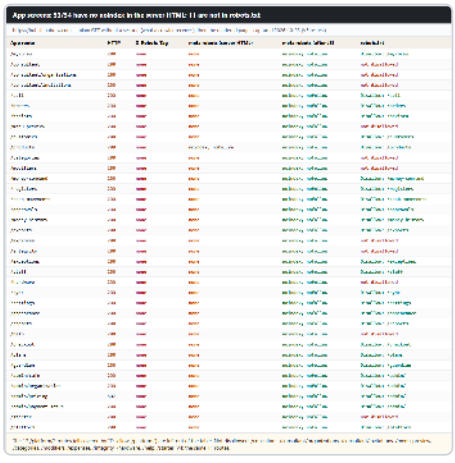

Expected: Every signed-in route answers with X-Robots-Tag: noindex (or noindex in the server HTML), and robots.txt covers all of them.

Actual: 54 app routes (incl. 18 /platform): 53 answer 200, /admin/pricing 307; X-Robots-Tag on 0/54; robots meta in server HTML on 1/54 (/products); "noindex, nofollow" after JS on 54/54. Not disallowed: /consultant, /consultant/organizations, /consultant/invitations, /menu-preview, /categories, /modifiers, /expenses, /integrity, /hardware, /help, /starter.

Suggested fix: Send "X-Robots-Tag: noindex" for every non-marketing route at the edge (vercel.json headers), and add Disallow lines for the 11 routes above (or move the app under one prefix such as /app/).

SEO-03 (2 of 2) · V5, 3 Oct 2026

SEO-04 · Forgot-password H1 is still just the brand name, and the noindex sign-in page is still listed in sitemap.xml LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/forgot-password` , `/sitemap.xml`

Re-test (V5): Partially fixed Unchanged since V4: /auth is fine, but /forgot-password's H1 is still just "HubsteriaBrew", and /auth (noindex) is still submitted in sitemap.xml.

Description: The sign-in page has its canonical, robots and H1 fixed. Two loose ends remain. The forgot-password page's main heading is only the brand name "HubsteriaBrew", so screen-reader users and search engines don't learn what the page is for. And sitemap.xml still asks search engines to index /auth, which the page itself marks "noindex, nofollow": a mixed signal that Search Console reports as an error.

Steps to reproduce:

1. Open https://hubsteriabrew.com/forgot-password and read the H1.
2. Open https://hubsteriabrew.com/sitemap.xml and search for /auth.
3. Open https://hubsteriabrew.com/auth and read the robots meta.

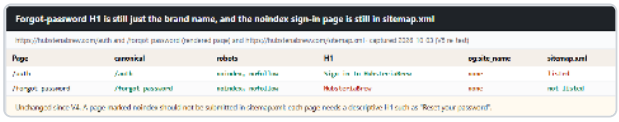

Expected: /forgot-password has a descriptive H1 (e.g. "Reset your password"); pages marked noindex are not listed in sitemap.xml.

Actual: /auth: canonical /auth, "noindex, nofollow", H1 "Sign in to HubsteriaBrew", listed in sitemap.xml (16 URLs). /forgot-password: canonical, "noindex, nofollow", H1 "HubsteriaBrew", not in sitemap. og:site_name missing on both.

Suggested fix: Change the forgot-password H1 to "Reset your password" and remove /auth from sitemap.xml.

SEO-04 (1 of 2) · V4

SEO-04 (2 of 2) · V5, 3 Oct 2026

SEO-05 · Four page titles are still very short (/contact, /security, /privacy, /terms)

LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/contact` , `/security` , `/privacy` , `/terms`

Re-test (V5): Partially fixed Unchanged since V4: all descriptions are 120–230 characters, but /contact (23), /security (24), /privacy (23) and /terms (21) still have very short titles.

Description: Every indexable marketing page now has a good description. Four titles are still only a word plus the brand, e.g. "Terms — HubsteriaBrew" (21 characters) and "Contact — HubsteriaBrew" (23). In search results and browser tabs they say little about the page, and the Contact page, whose H1 is "Book a Demo", misses a chance to say so.

Steps to reproduce:

1. Open each public page and read `<title>` and `<meta name="description">` .
2. Count the characters.

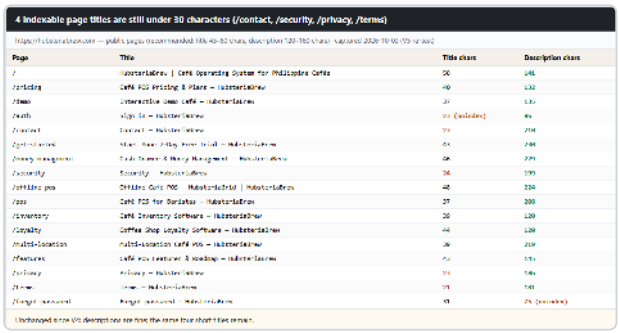

Expected: Titles of roughly 45–60 characters that describe the page (e.g. "Book a Demo of HubsteriaBrew Café POS — Contact").

Actual: Titles under 30 on indexable pages: /contact 23, /security 24, /privacy 23, /terms 21 (/auth 23 is noindex). Descriptions on indexable pages: 120–230.

Suggested fix: Lengthen the four titles, e.g. "Book a Demo — HubsteriaBrew Café POS for the Philippines", "Security & Data Protection — HubsteriaBrew", "Privacy Policy (Data Privacy Act) — HubsteriaBrew", "Terms of Service — HubsteriaBrew Café POS".

SEO-05 (1 of 2) · V4

SEO-05 (2 of 2) · V5, 3 Oct 2026

Security

SEC-02 · CSP still allows inline scripts ('unsafe-inline'), and the session token is still in localStorage MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/ (all pages)`

Re-test (V5): Still open Unchanged: the Content-Security-Policy is identical to V4 (script-src 'self' 'unsafe-inline' https://cdn.videoservicedesk.com), and the Supabase session is still the localStorage key sb-...-auth-token (2,056 characters).

Description: The site's Content-Security-Policy still allows any inline script to run. That is the main protection that would stop an injected script (for example through a product name or customer note that is displayed somewhere without escaping). At the same time the sign-in session is kept in the browser's localStorage, where any script on the page can read it. Together, one injection bug anywhere would let an attacker copy an owner's session. The cookie-session option the app has is still switched off.

Steps to reproduce:

1. curl -sI https://hubsteriabrew.com/ and read Content-Security-Policy.
2. Sign in and check DevTools → Application → Local Storage (key names only).

Expected: script-src without 'unsafe-inline' (nonces or hashes), and the session in an HttpOnly, Secure, SameSite cookie, or at least short-lived tokens.

Actual: script-src 'self' 'unsafe-inline' https://cdn.videoservicedesk.com (identical to V4) on 17/17 public pages and the app routes checked; localStorage "sb-lwqcnyomsrdtdxmjhznr-auth-token" (2,056 chars); 627/627 Supabase calls carry the user JWT as a Bearer header; product policy feature_cookie_sessions_enabled: false; only cookies __vdpl (Vercel) and __cf_bm (Supabase host).

Suggested fix: Remove 'unsafe-inline' from script-src (move inline scripts to files or add nonces/hashes), then turn on cookie-based sessions (Supabase SSR helpers with HttpOnly cookies).

CSP still allows inline scripts ('unsafe-inline'); the session token is still in localStorage

https://hubsteriabrew.com/ — Content-Security-Policy header split by directive; identical to V4 · captured 2026-10-03 (V5 re-test)

Directive	Value
default-src	'self'
base-uri	'self'
object-src	'none'
form-action	'self'
frame-ancestors	'none'
script-src	'self' 'unsafe-inline' https://cdn.videoservicedesk.com
style-src	'self' 'unsafe-inline' https://fonts.googleapis.com
img-src	'self' data: blob: https:
font-src	'self' data: https://fonts.gstatic.com
connect-src	'self' https://*.supabase.co wss://*.supabase.co https://api.stripe.com https://vsd.li
frame-src	'self' https://*.stripe.com https://vsd.li
worker-src	'self' blob:
Session token	localStorage "sb-lwqcnyomsrdtdxmjhznr-auth-token" (2056 chars, readable by any script on the page)
Calls authenticated	627/627 Supabase calls carry the user JWT as a Bearer header; cookie sessions flag: false

While 'unsafe-inline' stays in script-src, an injected inline script would run and could read the token.

SEC-02: V5, 3 Oct 2026

SEC-14 · Consultant account now sees the 18-page master-admin "T1 Platform" menu, which its own help calls admin-only MEDIUM

Severity: MEDIUM **Page:** `https://hubsteriabrew.com/platform (sidebar section "T1 Platform", 18 pages)`

Re-test (V5): New First found in this V5 audit.

Description: Since V4 the QA account, a Platform Consultant who is "Business owner" in the demo café, has a new sidebar section "T1 Platform" with 18 pages: Organization Center, T2 Administrators, Users and Access, Security and Audit, Overrides, Platform Settings and more. The page's own help box says "Platform-wide health and actions for master administrators only — not the consultant workspace", and the Consultant page says the account has "not T1 Master Control". The pages open, but almost all load no data (the overview is empty), so the server seems to refuse. Showing master-admin tools to the wrong role invites mistakes and relies on the server alone; Staff even says "Platform access is never granted from here".

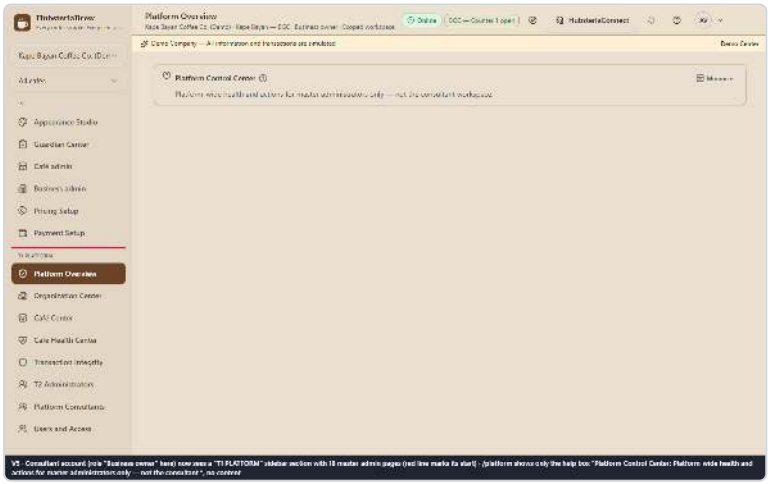

Steps to reproduce:

1. Sign in with the consultant account and switch to Kape Bayan Coffee Co. (Demo).
2. Scroll the sidebar below Administration: section "T1 PLATFORM" with 18 links.
3. Click Platform Overview and read the help box; open a few other Platform pages.
4. Open /consultant: "Platform Consultant (T1C) … not T1 Master Control".

Expected: Only master (T1) administrators see the T1 Platform menu; for everyone else the links are absent and the routes redirect.

Actual: Sidebar (both organisations): "T1 PLATFORM" with 18 links (/platform, /platform/organizations, /cafes, /health, /integrity, /administrators, /consultants, /users, /guardian, /speed, /regressions, /grid, /self-healing, /system, /features, /security, /overrides, /settings), absent in V4. All 18 open on a full load (2 also tried by sidebar click); 15 make no page-specific data request; /platform/integrity → 400 (NET-11); /platform/guardian → rpc/cafe_guardian_latest_run 200 (empty).

Suggested fix: Show the T1 Platform section only when the session's platform role is T1 master admin, and redirect /platform/* for other roles (as already done for pilot-hidden pages), with the same check on the server. If the QA account was given this role on purpose, say so.

SEC-14: V5, 3 Oct 2026

SEC-05 · www → apex redirect is still temporary (307) LOW

Severity: LOW **Page:** `https://www.hubsteriabrew.com/`

Re-test (V5): Partially fixed Unchanged since V4: HSTS on the main domain is preload-ready and http → https is a permanent 308, but www → apex is still a temporary 307 and the www host's HSTS lacks includeSubDomains and preload.

Description: Visitors who type www.hubsteriabrew.com are sent to hubsteriabrew.com with a temporary redirect (307). Search engines treat a temporary redirect as "may change", so they keep both addresses and split ranking signals between them; browsers don't cache it. The www host also sends a weaker HSTS header than the main domain.

Steps to reproduce:

1. curl -sI https://www.hubsteriabrew.com/ and http://www.hubsteriabrew.com/.
2. curl -sI https://hubsteriabrew.com/ and read Strict-Transport-Security.

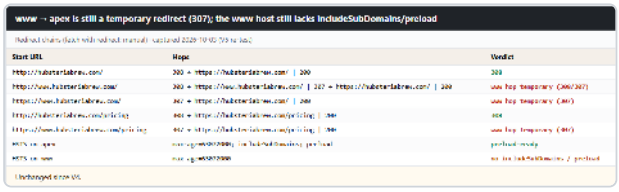

Expected: www → apex answers 301 or 308; both hosts send HSTS with includeSubDomains (and preload).

Actual: https://www → 307 → apex; http://www → 308 → https://www → 307 → apex; http://apex → 308; apex HSTS "max-age=63072000; includeSubDomains; preload"; www HSTS "max-age=63072000".

Suggested fix: In Vercel → Domains, set www.hubsteriabrew.com to redirect to hubsteriabrew.com with "308 Permanent".

SEC-05 (1 of 2) · V4

SEC-05 (2 of 2) · V5, 3 Oct 2026

SEC-09 · Anonymous speed samples go through a public database function; its validation and rate limit are unknown LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/pricing (and 13 other public pages) → Supabase rpc/cafe_record_client_perf_sample`

Re-test (V5): Partially fixed Unchanged since V4: 14 of 17 logged-out pages send speed samples to the public function rpc/cafe_record_client_perf_sample (204); no direct table writes. Whether it validates values or limits the rate still cannot be seen from outside.

Description: Logged-out marketing pages report their loading speed by calling a database function with the public key. That is better than the open table write of V3. But anyone can call the same function with any values, as often as they like, and from outside we cannot tell whether it rejects nonsense values or limits how often it is called. Without such limits the speed data the platform shows (Speed Center) can be filled with junk.

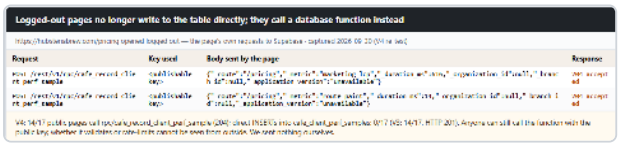

Steps to reproduce:

1. Open https://hubsteriabrew.com/pricing while logged out.
2. DevTools → Network: filter "perf_sample".
3. Check the request (public key, organization_id null) and the 204 response.

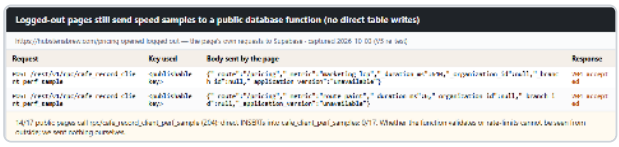

Expected: The function validates route, metric and duration and is rate-limited (or samples go to an analytics endpoint instead of the database).

Actual: POST /rest/v1/rpc/cafe_record_client_perf_sample (publishable key) body {"_route":"/pricing","_metric":"marketing_lcp","_duration_ms":640,"_organization_id":null,"_branch_id":null, "_application_version":"unavailable"} → 204, twice per page on 14/17 public pages; direct INSERTs into cafe_client_perf_samples: 0/17.

Suggested fix: Confirm in the function that metric and route come from an allow-list and durations are within a sane range, and add a per-IP or per-minute limit; or send these samples to Vercel Speed Insights, which is already loaded.

SEC-09 (1 of 2) · V4

SEC-09 (2 of 2) · V5, 3 Oct 2026

SEC-12 · Security headers still trust an outside video service, including camera and microphone, that no page uses LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/ (response headers on every page)`

Re-test (V5): Still open Unchanged: the headers still allow scripts from cdn.videoservicedesk.com and connections, frames, camera and microphone for vsd.li, while none of the 87 page loads and clicks we recorded contacted either host.

Description: Every page's security headers still allow scripts from an outside video-support service (cdn.videoservicedesk.com), let it connect and open frames (vsd.li), and grant that service camera and microphone access. On no page we opened did the site actually contact these hosts. Every allowed outside host widens what an injected script could load, and camera and microphone permission for a third party is sensitive. If the service belongs to the HubsteriaConnect button, it should be documented in the Privacy Policy and limited to the page that uses it.

Steps to reproduce:

1. curl -sI https://hubsteriabrew.com/ and read Content-Security-Policy and Permissions-Policy.
2. Browse the public pages and the signed-in sidebar pages with DevTools → Network filtered on "vsd" or "videoservicedesk".

Expected: Headers only allow third parties the site actually uses, with camera and microphone off (camera=(), microphone=()) unless a page needs them.

Actual: script-src … https://cdn.videoservicedesk.com; connect-src … https://vsd.li; frame-src 'self' https://*.stripe.com https://vsd.li; Permissions-Policy camera=("https://vsd.li"), microphone=("https://vsd.li") (identical to V4). Requests to these hosts: 0 on 17 public + 56 signed-in page loads + 14 sidebar clicks.

Suggested fix: Remove videoservicedesk.com and vsd.li from the CSP and set camera=() and microphone=(), or add them only on the route that opens the video support, and name the provider in the Privacy Policy.

Headers still trust an outside video service (incl. camera and microphone) that no page loads

https://hubsteriabrew.com/ — response headers; identical to V4 · captured 2026-10-03 (V5 re-test)

Header	V5
script-src	script-src 'self' 'unsafe-inline' https://cdn.videoservicedesk.com
connect-src	connect-src 'self' https://*.supabase.co wss://*.supabase.co https://api.stripe.com https://vsd.li
frame-src	frame-src 'self' https://*.stripe.com https://vsd.li
Permissions-Policy	camera=("https://vsd.li"), microphone=("https://vsd.li"), geolocation=(), payment=(self)
Requests to these hosts	none on 17 public + 56 signed-in loads + 14 sidebar clicks

Before V4: script-src 'self' 'unsafe-inline' only; camera=(), microphone=().

SEC-12: V5, 3 Oct 2026

SEC-13 · Terms and Privacy Policy changed after V3 but still say "In effect since 24 September 2026" LOW

Severity: LOW **Page:** `https://hubsteriabrew.com/terms` , `/privacy`

Re-test (V5): Still open Unchanged: /terms and /privacy still say "In effect since 24 September 2026", although both were rewritten after V3 (governing-law section, new operator address).

Description: Between V3 (25 Sep) and V4 (30 Sep) both legal pages changed in substance: the Terms gained a governing-law and dispute section (Arizona law, Arizona courts), and the Privacy Policy's operator address moved from Waddell, AZ to Palm Desert, CA. Both still show "In effect since 24 September 2026", and there is no "last updated" date or change note. Customers who accepted the earlier version cannot tell that the terms changed, and the Terms themselves promise that material changes are emailed first.

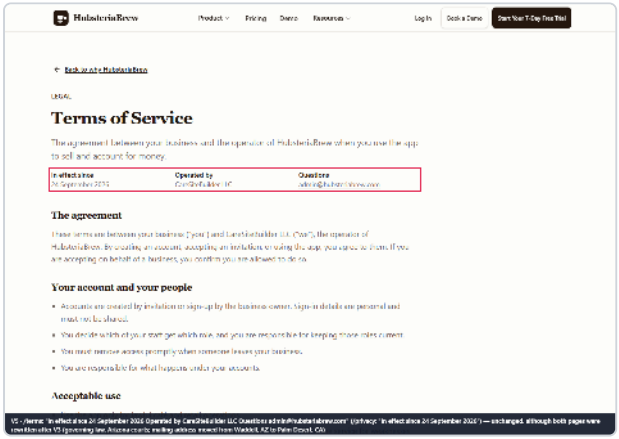

Steps to reproduce:

1. Open https://hubsteriabrew.com/terms and read the "In effect since" line at the top.
2. Scroll to "Governing law and disputes" and "Changes and contact".
3. Open https://hubsteriabrew.com/privacy and read the date and the mailing address.

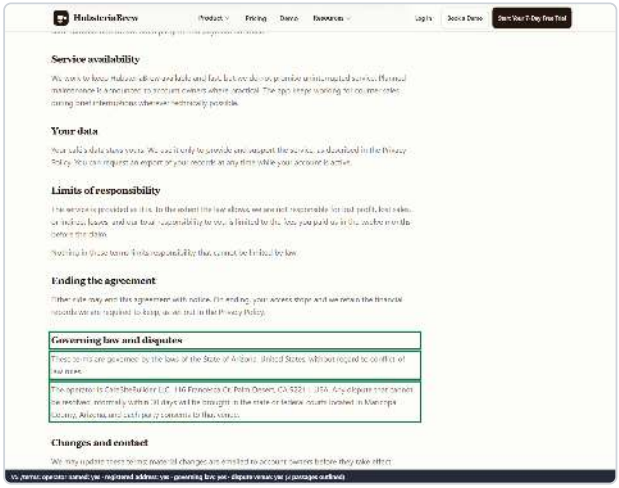

Expected: A changed policy shows a new effective or "last updated" date (and a short change log), and material changes are announced as the Terms promise.

Actual: /terms: "In effect since 24 September 2026"; text identical to V4 (689 words) incl. "Governing law and disputes". /privacy: "In effect since 24 September 2026"; "Mailing address: CareSiteBuilder LLC, 116 Francesca Ct, Palm Desert, CA 92211, USA" (V3: Waddell, AZ).

Suggested fix: Add a "Last updated" date to both pages (the date of the governing-law and address change) and a short "What changed" note; email account owners as the Terms promise.

SEC-13 (1 of 2) · V5, 3 Oct 2026

SEC-13 (2 of 2) · V5, 3 Oct 2026

Prioritized Top-10 Fix List

This list covers what is still open in V5. It is ordered by impact on a café's ability to trade and trust its numbers, then by risk, then by how many issues each fix resolves. Effort is a black-box estimate (S = hours, M = a day or two, L = several days) for the development team to confirm.

#	Fix	Resolves	Severity	Effort
1	**Make Money history's Daily totals add up, for every day.** Count each cash sale and refund once so the card matches Registers and Cash in / out. Give every café day its own card instead of filing new sales under a shift opened days ago. Warn when a shift has been open for more than a day.	FUN-42, FUN-81, FUN-20, FUN-30	HIGH	M
2	**File each sale on the day it was paid.** Use the order's placed/paid time, not the time its draft was created, in Orders, My Brew and Money Command. Use the café's time zone for day and hour boundaries, including sales before 6 AM.	FUN-80, FUN-41, FUN-82	HIGH	S–M
3	**Never show an uncounted or short shift as "Balanced".** Show the shortage on Registers and Money history, the screens the pilot keeps, and raise an alert on My Brew.	FUN-67, FUN-17	HIGH	S
4	**Make the discount and refund cards reconcile.** Keep partial refunds out of "Sales after discounts", or show them on their own line, so My Brew's payment methods match net sales.	FUN-40	MEDIUM	S
5	**Show where the cashier is selling.** Add the organisation name and a "Demo · simulated" badge to Sell, Checkout, Orders, Barista and Customers, and keep the café, register and Online status visible on phones and tablets.	FUN-83, UI-39	MEDIUM	S
6	**Upload the small product photos.** The new `srcset` points at `-300.webp` files that answer 404. Publish 160–400 px versions so desktop shows photos again and phones stop downloading the 800-px files.	NET-09, PERF-05, PERF-01	MEDIUM	S
7	**Finish the pilot trim and hide the platform menu.** Apply the hide flags to the sidebar, in-app links and client-side navigation, and keep the 18-page "T1 Platform" section for master administrators only. Fix the Transaction Integrity query that exposes a database error.	FUN-71, FUN-74, SEC-14, NET-11	MEDIUM	S–M
8	**Confirm the email sender and finish the sign-up checks.** Check that the `+qa5v5` sign-up and reset emails came from `admin@hubsteriabrew.com`, and use the same email check on the T2 invitation form.	FRM-04, FRM-09	HIGH	S
9	**Cut the JavaScript and stop the layout shift.** Split back-office code out of the public and sign-in bundles, reserve space for My Brew, Products and Registers, and let the workspace header fit at 1024–1280 px.	PERF-04, PERF-03, UI-22, UI-21	MEDIUM	M

#	Fix	Resolves	Severity	Effort
10	**Polish the new checkout flow.** Keep the complete-sale button above the fold, show the change due on the confirmation, keep Hold/Discount/Clear reachable on tablets, and move focus and announcements with each step.	UI-40, FUN-86, UI-41, UI-42, A11Y-20, A11Y-21	LOW	S

Next after the top 10:

- **Owner screens:** remove the developer wording from Pricing Setup (FUN-56) and the public pages (UI-06), use lining numerals for money (UI-10), and give the single-café pilot wizard no "Add another café" (FUN-70).
- **Forms:** explain why Book a Demo refuses a phone number (FRM-07), and keep the 14-digit low-stock and −1 values out (FRM-22, FRM-14).
- **Reliability and security hardening:**
  - Settings counts every payment on each visit and sometimes fails with HTTP 500 (NET-10).
  - React error #418 still fires on most signed-in pages (NET-08).
  - Move to CSP nonces (SEC-02).
- **Accessibility on the new screens:** add headings to the full-screen pages (A11Y-18), fix the small-text contrast (A11Y-22), announce the discounted total (A11Y-25), and link Appearance Studio's colour error to its field (A11Y-14).

Appendix

A. Pages tested

Public pages (17, tested logged out): `/`, `/pricing`, `/demo`, `/auth`, `/contact`, `/get-started`, `/money-management`, `/security`, `/offline-pos`, `/pos`, `/inventory`, `/loyalty`, `/multi-location`, `/features`, `/privacy`, `/terms`, `/forgot-password`. We also checked:

- `/robots.txt`, `/sitemap.xml` and every URL in it
- `/.well-known/security.txt`
- a public demo guest seat
- one made-up URL, for the 404 page

App screens (tested signed in, in the Kape Bayan demo café):

- **Café operations:** `/my-brew`, `/sell` and `/checkout` (now full-screen), `/orders`, `/orders/<id>` (plus `/refund`), `/receipt/<id>`, `/barista`, `/customers`, `/loyalty`
- **Menu and stock:** `/products`, `/categories`, `/modifiers`, `/inventory`
- **Money:** `/registers`, `/cash-movements`, `/money-history`, `/exports`
- **Team and café:** `/starter` (Café Starter Wizard, look only), `/staff`, `/hardware`, `/sync` (HubsteriaGrid), `/settings`, `/plans`, `/help`, `/profile`, `/account-security`, `/consultant`
- **The 14 modules the Pilot MVP says are hidden:** `/money-command`, `/demo`, `/features`, `/appearance` (now "Appearance Studio"), `/guardian`, `/admin/pricing`, `/admin/payment-setup`, `/integrity`, `/exceptions`, `/admin/organization`, `/admin/cafe`, `/menu-preview`, `/expenses`, `/approvals`. Each was opened in two ways: by typing the address (it redirects to My Brew) and by clicking its sidebar link (it opens).
- **The "T1 Platform" section** (`/platform/*`, 18 pages): opened read-only from the sidebar.
- **The "HubsteriaBrew" pilot organisation:** My Brew, the sidebar, the hidden routes and the Café Starter Wizard, all read-only.

Crawler results: 17 public and 145 signed-in URLs, including every order, receipt and category link found. There were no broken internal links. 59 image requests failed, matching the 59 missing Sell thumbnails (NET-09).

B. Viewports and devices

Name	Size (CSS px)	Used for
Phone	375 × 812	Screenshots, overflow and tap-target checks, forms, the new Sell order sheet
Tablet portrait (iPad)	768 × 1024	Screenshots, Sell order sheet and Checkout
Tablet landscape (iPad)	1024 × 768	App screenshots, Sell/cart, header check
Desktop	1440 × 900	Screenshots, all functional flows, all V5 test sales
Laptops (spot check)	1280 × 800, 1366 × 768, 1920 × 1080	Sell cart and Checkout (UI-02, UI-03, UI-40), header (UI-22)
Lighthouse mobile / desktop	Moto G Power emulation / 1350 × 940	Performance scorecard

We captured 920 V5 screenshots, covering the responsive pages at each width and evidence for every finding. Every screenshot cited in this report was reviewed by eye. They are in `v5/screenshots`, organised by area: `responsive`, `functional`, `ui`, `pos`, `forms`, `admin`, `a11y`, `network`, `seo`, `security`, `perf`, `auth`, `trim` (the pilot-trim checks) and `verify`.

Screenshot captions:

- "V5" means taken on 3 October 2026.
- For a partially fixed or regressed finding, the V4 image is shown next to the V5 one. V4 images come from `v4/screenshots`.

C. Tools used

Tool	Version	Purpose
Playwright (Chromium)	1.63.0	Crawling, flows, forms, screenshots, console/network capture
Lighthouse	12.8.2	Performance, accessibility, best-practice and SEO scores
axe-core via @axe-core/playwright	4.13.0	WCAG 2.2 AA automated accessibility scan
Node.js	22.18.0	Test scripts
marked	18.0.14	Markdown → HTML for this report
pdf.js (pdfjs-dist)	6.3.289	Rendering the PDF pages to images for layout checks

The tools and versions are the same as in V1–V4, so the results can be compared directly.

Where things are:

- Every round since V4 uses the same scripts in `scripts/round/`. They take the round from `QA_ROOT=vN` and the site settings from `qa/qa-brief.md`.
- **New in V5:** `scripts/round/sell-lib.js` handles the full-screen register. It proves the demo café on a workspace page before any sale, because Sell no longer shows the demo label.
- `QA_ROOT=v5 node scripts/round/00-baseline.js` rebuilds the list of V4 findings that V5 re-tests (`v5/data/prev-baseline.json`).
- `QA_ROOT=v5 node scripts/round/90-assemble.js --compose` rebuilds `v5/qa-report.md`, and `node build-pdf.js v5` rebuilds this PDF.
- The `/qa-run` command in Claude Code runs a whole new round the same way.

Credentials are read from a local `.env` file and never appear in the scripts, screenshots or this report.

D. How testing was done

1. **Baseline:** we rebuilt all 168 V4 findings (99 open + 69 fixed in V4) with the exact text the V4 report used. No developer document had arrived since V4, so there were no claims to turn into checks.
2. **Gate (lead):**
   - a smoke test and a fresh sign-in (first attempt, no captcha)
   - a check of every module the pilot hides, in both organisations, first by typed address and then by sidebar click
   - one crawl of every internal link (logged out, then signed in) and a check of the API errors
   - **one gate cash sale (1003-010, ₱35), which succeeded**, so the other sales could go ahead
3. **Wave 1, in parallel (7 testers, each with its own session):**
   - functional and navigation checks
   - responsive screenshots at 375, 768 and 1440 px (plus 1024, 1280, 1366 and 1920 px for the new register and header), each reviewed by eye
   - console, network, SEO and passive security checks
   - accessibility (axe scans and keyboard-only walk-throughs, including the new Sell and Checkout)
   - forms and sign-up with valid, empty and invalid input
   - the full testing-guide POS flow with 3 more sales and 1 void (QA-TEST data only)
   - menu and admin create, edit and hide, followed by a full cleanup
4. **Wave 2, Lighthouse:** run alone on an otherwise idle machine, then compared audit by audit with V1–V4.
5. **Wave 3, independent verification:** a separate tester, with its own session, re-checked 93 results from scratch:
   - every Regressed and Not verifiable status
   - every Fixed of a former Critical, High or Medium finding
   - every new High or Medium finding
   - samples of 16 new Low findings and 21 partial or open items

   That tester changed 2 severities, made 11 status labels consistent and merged 3 duplicate new findings.

6. **Last, sign-out and wrong-password tests:** run alone, because logging out ends the session on that device.

Re-test rules:

- **Fixed:** the finding's V4 steps now give the expected result, and a V5 screenshot shows it.
- **Partially fixed:** the behaviour is better than when first reported, but part of the problem remains. An item that was partly fixed in V4 and is unchanged keeps this status.
- **Still open:** it behaves as before, and no part of it has been fixed.
- **Regressed:** it is worse than in V4, or a V4 fix came undone.
- **Hidden in pilot:** used only if an owner can no longer reach the page by any normal path. It was again unused: every hidden page still opens from its sidebar link.

IDs: carried-over findings keep their ID. New findings continue each category's numbering after the highest ID ever used (FUN-80–FUN-86, UI-39–UI-44, NET-09–NET-11, A11Y-18–A11Y-25, SEC-14).

E. Test data created on the live site

All test data was created in the **Kape Bayan Coffee Co. (Demo)** café, which is labelled "all information and transactions are simulated". Nothing was written in the HubsteriaBrew pilot organisation: the one Café Starter Wizard progress save there was blocked by our test before it reached the server.

Item	Status / action needed
4 cash sales: 1003-010 (₱35, gate), 1003-011 (₱175.50, Dine in, 10% off), 1003-012 (₱35, ₱100 tendered), 1003-013 (₱140, ₱200 tendered)	All paid in cash and reconciled. 1003-011 and 1003-013 were moved to Served; 1003-010 was left under New. The 5th authorised sale was not used.
1 void and refund of 1003-012 (₱35)	Done through the order page. The drawer, My Brew and Money Command moved by −₱35. Money history booked it under 30 September and doubled the cash out (FUN-42, FUN-81).
Products "QA-TEST V5 Snack" and "QA-TEST V5 Hidden-Cat Item"	Archived; no QA-TEST tile is left on Sell.
Category "QA-TEST V5 Category"	Moved up and back, then left hidden (the app cannot delete categories).
Add-on group "QA-TEST V5 Choice Group"	Switched off.
Customer "QA-TEST V5 Customer"	Anonymised with "Remove personal details".
Product "QA-TEST Latte" (₱150), left over from V1	Archived this round.
Staff invite to `qa.test+v5@example.com`	Not sent: the demo café shows "Invitations are not available in this demo seat".
1 sign-up: the `+qa5v5` alias of the test account, business "QA-TEST Café V5"	**Please delete** this auth user and its workspace. The weak passwords "password" and "abc12345" were refused; a strong random password was accepted.
1 password-reset request for the same address	Nothing to clean up.
1 Book a Demo lead "QA-TEST V5" (`qa.test+v5@example.com` , id 94a3e873…)	**Please delete** it (there is no UI to delete leads).
1 public demo guest seat	Started by the SEC-01 check; it expires on its own.
From V3 and V4, still to delete (unless already done)	The `+qa3v3` and `+qa4v4` auth users and the QA-TEST V3 and V4 leads.

F. Testing limitations

- **Black-box only:** there was no access to the source code, database, server logs or the developer's repository. Statements about causes are inferences from what the browser receives.
- **Passive security only:** we read headers, delivered pages and our own traffic. There were no attacks, injection, fuzzing, brute force or hidden-path scanning. The routes we visited are linked from the site's own sidebar or named in the developer's briefing.

- **Shared demo café:** public demo guests and a demo simulator were using the Kape Bayan café at the same time. Reconciliation therefore used our own order numbers and before/after snapshots taken seconds apart.
- **Payments:** only cash was used. GCash, Maya, card and QR payments (guide steps 16–17) and cash in/out (step 20) were out of scope.
- **Email:** we cannot see which provider sent the sign-up and reset emails. FRM-04 stays Not verifiable until the sender of the `+qa5v5` messages is checked in the inbox.
- **Saves we did not make:** we never pressed Save on customer, settings, staff or hardware forms, so FRM-08 (an invalid email accepted on Save) could not be re-checked.
- **Device spot-checks:** this round they come from the responsive tests of the new register at each width, not from a separate device run.
- **Single measurements:** each Lighthouse page was run once per device (Sell and My Brew twice), so small score changes are noise. The test machine was about 9% slower than in V4.
- **Server-side rules** (password policy, database constraints, the single-café lock) can only be seen where the page lets a request through; we did not bypass the page to test them.
